Zoom Participation Quick Tips

Zoom Help Videos!

https://youtu.be/XIhuNFv_P8U

Except for Raise/Lower Hand; the Reactions and Feedback buttons will appear for just 10 seconds in your video thumbnail & next to your name in the Participant Panel

If Zoom Audio or Video doesn't work for YOU:

1. First check with class on Audio &/or Video
2. Using Zoom menu "v", check your Zoom A/V settings
3. Using Audio menu, TEST your Zoom Spkr & Mic
4. Then check your computer's audio settings
5. Leave then Join Zoom Computer Audio (this does not close the Zoom session)
6. Leave Zoom session then rejoin it
7. Use Zoom phone number to dial in for Audio
8. Ask clientservices@acilearning.com for assistance

- ❖ Chat & Participant Panels may be resized <-> & v^
- ❖ Panels & Video can float & be moved about
- ❖ Temporarily Unmute by holding down the Spacebar!

Who Are You?

- Your name & where you are originally from
- Your Work &/or IT background
 - a) User level
 - b) Military &/or Gov IT job
 - c) Corporate IT job
 - d) Any combo of above
- Your career objective
- Something interesting about yourself - i.e. hobby
- Android or iPhone?

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Who Are You?

Please introduce yourself:

- Name and organization or “student”
- Your organization’s core business
- Who is your “customer”
- Your current roles and responsibilities
- Your IT challenges
- Recent ITIL® exposure/knowledge
- Your expectations from this program

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Foundation Class Objectives

- The objective of this session is to:
 - Discuss the ITIL® 4 qualification scheme
 - Understand the key concepts of service management
 - Define key terminology
 - Describe the key concepts of creating value with services
 - Describe the key concepts of service relationships
 - Understand how the ITIL® guiding principles can help an organization adopt and adapt service management
 - Describe the nature, use and interaction of the guiding principles
 - Explain the use of the guiding principles

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Foundation Class Objectives (Continued)

- Understand the four dimensions of service management
- Understand the purpose and components of the ITIL® service value system
- Understand the activities of the service value chain, and how they interconnect
- Know the purpose and key terms of the 15 ITIL® practices; understand seven in-depth
- Prepare for the ITIL®4 certification exam

This course follows the syllabus issued by the Official ITIL® Accreditor

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Learning Approach

- Facilitator-Led Instruction
- Interactive Discussions and Case Studies
- Exercises
- Quizzes
- Mock Exams
- Self Study:
 - ITIL®4 Student Guide
 - ITIL®4 Foundation Syllabus
 - ITIL®4 Foundation Glossary
 - ITIL®4 Official App for iPhone or Android

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Case Studies

HEALTHCARE CASE STUDY
Beginner Skill Set Focus

AT A GLANCE
Challenges: The hospital's current system is outdated and inefficient. Skills Needed: Communication, Problem Solving, Teamwork. ITIL Guidance Topics: Service Design, Incident Management.

BACKGROUND
ACI General Hospital is part of a large medical group that contains doctors, nurses, urgent care centers, pharmacies, and laboratories. You have been hired as a service design specialist for the IT department. It is your first day on the job, and you are listening to a call that came into the service desk in regards to the patient website. Several calls have come in with users complaining that they are unable to connect.

OBJECTIVE
Your manager has asked you to handle the next call, and it is another user stating that they cannot connect. What is the first thing you should do? Write out the flow of handling this incident from start to finish.

CONSIDERATIONS
Think One: What if the incident resolution does not solve the problem, what do you do next? What would you do if the user is not a patient?

Think Two: The user is very upset and wants to speak to a supervisor. What is a typical response for that impact?

HEALTHCARE CASE STUDY
Intermediate Skill Set Focus

AT A GLANCE
Challenges: The hospital's current system is outdated and inefficient. Skills Needed: Communication, Problem Solving, Teamwork. ITIL Guidance Topics: Service Design, Incident Management.

BACKGROUND
ACI General Hospital has been adding more ITIL practices to its IT department in preparation with a large renovation to its United Communications system. They have budgeted for an upgraded equipment and a new IT Service Management suite of software. One of the aspects of the communications system upgrade has been the addition of a new server room to all hospitals and urgent care centers. Recently, there have been outages of the email system, and "visual outages" have been reported.

OBJECTIVE
You are now the IT Third Communications director for the IT department. You have been doing some problem management and have discovered that the email outages are currently using two a morning but that consistently cause the system to lock up. You can replace the system, but it costs around \$100,000 in services to replace. Contacting the supplier, you find that their solution is to upgrade the server room. This will cost an additional \$75,000 in licensing. What should you do?

CONSIDERATIONS
Think One: How can you use or implement the new solution if the budget is not there to implement the upgrade? How can you help the user keep the system up and running?

Think Two: As what other would it make more sense to pay for the upgrade or to replace the system? Is there an ITIL Practice that could assist in this decision?

HEALTHCARE CASE STUDY
Advanced Skill Set Focus

AT A GLANCE
Challenges: The hospital's current system is outdated and inefficient. Skills Needed: Communication, Problem Solving, Teamwork. ITIL Guidance Topics: Service Design, Incident Management.

BACKGROUND
The Medical group has just hired a new CTO. She is an ITIL Managing Professional and Strategic Leader. Having worked at the current organizational value, she calls a meeting of all department heads to discuss the strategy for the IT department, meaning of your actions with the Medical Communications project. The CTO asks you to take over the Service Desk for the entire medical group and also specified an improvement initiative to help take around the poor Customer Service scores.

OBJECTIVE
You will be meeting with the staff leaders and representatives from Tier 1 to Tier 2 of the group. You have been given a limited budget, but if necessary, you can build a business case for spending money on improvements. What do you do FIRST with an environment initiative that follows the ITIL Model flow.

CONSIDERATIONS
Think One: What training will be one of your plans, feedback from a report tomorrow. What are you doing to improve?

Think Two: You will be meeting with the staff leaders and representatives from Tier 1 to Tier 2 of the group. You have been given a limited budget, but if necessary, you can build a business case for spending money on improvements. What do you do FIRST with an environment initiative that follows the ITIL Model flow.

- Three Case Studies, at different levels, for greater interaction are available
- If time permits: Done in class.
 - Otherwise: Self Study

What is ITIL®?

ITIL® is a set of best practices and guidance in IT Service Management.

ITIL® has led the IT Service Management (ITSM) industry with guidance, training, and certification programs for over 30 years.

ITIL®4 is designed to ensure a flexibly, coordinated and integrated system for the effective governance and management of IT-enabled services.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

ITIL® History

- Owner: AXELOS Limited/PeopleCert
- First published: 1988-1998
- v2: Early 2000s:
 - Focus on Business Alignment
- v3 2007:
 - Focus on Business Integration
- 2011:
 - A rework of 2007 — clarifications; more consistent
 - Same fundamental concepts
 - Removal of “versioning”
- 2019 (ITIL® 4)
 - Evolution of best practice integrating modern and emerging practices
 - Foundation
 - Managing Professional Transition (MPT)
 - Create, Deliver, and Support (CDS)
 - Direct, Plan, and Improve (DPI)
- 2020 (ITIL® 4)
 - High Velocity IT (HVIT)
 - Drive Stakeholder Value (DSV)
 - Digital and IT Strategy (DITS)

Sunset Date for ITIL® Training/Exams:

- ITIL® v3 Intermediates (2011): December 31, 2021
- ITIL® 4 Managing Professional Transition: June 30, 2022

Why is ITIL® Successful?

ITIL® embraces a practical approach to service management — do what works.

What works is adapting a common framework of practices that unite all areas of IT service provision towards a single aim — that of delivering value to the business.

The following list defines the key characteristics of ITIL® that contribute to its global success:

- Focus on customer experience
- Value stream
- Digital transformation
- Embracing new ways; Lean, Agile, DevOps

ITIL® 4 Exam Format

ITIL® 4 Exam Format	
Type	Online, multiple choice, 40 questions. Question styles used within this type are: 'standard' multiple choice, 'missing word', 'list' (2 correct items), and, exceptionally, 'negative' question.
Duration	Maximum 60 minutes. Those sitting the examination in a language other than their native language have a maximum of 75 minutes.
Supervised	Yes
Open Book	No
Pass Score	65% (26 out of 40)
Where	Approved Examination Organization (AEO) OR Accredited Training Organization (ATO) or ONLINE through PeopleCert

Copyright © ACI Learning. All Rights Reserved.
 Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Exam Weightage

Learning Outcome	No. of Questions	Weight
1. Understand the key service concepts (BL1/BL2)	5	12.5%
2. Understand how the ITIL guiding principles can help an organization adopt and adapt service management (BL2)	6	15%
3. Understand the four dimensions of service management (BL2)	2	5%
4. Understand the purpose and components of the ITIL service value system (BL2)	1	2.5%
5. Understand the activities of the service value chain, and how they interconnect (BL2)	2	5%
6. Know the purpose and key terms of 15 ITIL® practices (BL1)	7	17.5%
7. Understand 7 ITIL® practices (BL2)	17	42.5%

IT Service Management Lesson Objectives

■ In this lesson, we will:

■ **Recall the definition of:**

- Service
- Utility
- Warranty
- Customer
- User
- Service Management
- Sponsor

■ **Describe the key concepts of creating value with services:**

- Cost
- Value
- Organization
- Outcome
- Output
- Risk

■ **Describe the key concepts of service relationships:**

- Service offering
- Service relationship management
- Service provision
- Service consumption

Service Lifecycle vs. Service Value System

Service Lifecycle

Service Value System

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

What is a Service?

Service definition: The means of enabling value co-creation by facilitating outcomes that customers want to achieve without the customer having to manage specific costs and risks.

- Costs and risks are transferred to the service provider
- Customers focus on outcomes versus means

Customers

- Transfers costs and risks
- Retains focus on core business

Service Providers

- Takes on costs and risks
- Responsible for the means of achieving outcomes

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Utility and Warranty

Utility definition: The functionality offered by a product or service to meet a particular need.

Utility can be summarized as “what the service does” and can be used to determine whether a service is **“fit for purpose.”**

Warranty definition: Assurance that a product or service will meet agreed requirements.

Warranty can be summarized as “how the service performs” and can be used to determine whether a service is **“fit for use.”**

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Utility and Warranty Create Value

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Utility and Warranty

For example, a recreational theme park may offer many exciting rides designed to deliver thrilling experiences for park visitors (**utility**).

But if a significant number of the rides are frequently unavailable due to mechanical difficulties, the park is not fulfilling the **warranty (it is not fit for use)**, and the consumers will not receive their expected value.

Likewise, if the rides are always up and running during advertised hours, but they do not have features that provide the levels of excitement expected by visitors, although the warranty is sufficient, the utility is not.

Again, consumers would not receive the expected value.

aci
LEARNING

Service Consumers: Customer, User, and Sponsor

When receiving services, an organization takes on the role of the service consumer. The service consumer is a generic role that is used to simplify the definition and description of the structure of service relationships.

In practice, there are more specific roles involved in service consumption, such as **customers**, **users**, and **sponsors**.

- **Customer:** The role that defines the requirements for a service and takes responsibility for the outcomes of service consumption
- **User:** The role that uses services
- **Sponsor:** The role that authorizes budget for service consumption

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Example of Customer, User, and Sponsor

For example, if a company wishes to purchase mobile phone services for its employees from a wireless carrier (the service provider), the various consumer roles may be distributed as follows:

- **Customer:** The Chief Information Officer (CIO) and key communications team members fill the role of the customer when they analyze the mobile communications requirements of the company's employees, negotiate the contract with the wireless carrier and monitor the carrier's performance against the contracted requirements.
- **User:** The employees (including the CIO, CFO, and communications team members) fill the role of users when they order, receive, and use the mobile phone services as per the agreed contract.
- **Sponsor:** The Chief Financial Officer (CFO) fills the role of the sponsor when they review the proposed service arrangement and approve the cost of the contract as negotiated.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

What is Capability?

Capability: The ability of an organization, person, process, application, configuration item, or IT service to carry out an activity.

Examples of capabilities:

- **Management**
- **Organization**
- **Process**
- **Knowledge**
- **People (experience and skills)**

The more mature a service provider's capabilities are, the greater their ability to consistently produce quality services that meet the needs of the customer in a timely and cost-effective manner. Without these capabilities, a service organization is merely a bundle of resources that by itself has relatively low intrinsic value for customers.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

What is an Organization?

- In service management, there are many different kinds of stakeholders, each of which must be understood in the context of the creation of value in the form of services. First, the term "organization" needs to be defined.

Organization: A person or a group of people that has its own functions with responsibilities, authorities, and relationships to achieve its objectives.

- Organizations vary in size and complexity, and in their relation to legal entities, from a single person or a team to a complex network of legal entities united by common objectives, relationships, and authorities.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

What is Value?

Value: Value is the perceived benefits, usefulness, and importance of something.

The term “value” is regularly used in service management, and it is a key focus of ITIL® 4; it must therefore be clearly defined.

Inherent in this definition is the understanding that value is subject to the perception of the stakeholders, whether they be the customer or consumer of a service or part of the service provider organization(s).

Note: Value can be subjective.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

What is IT Service Management?

Service management: A set of specialized organizational capabilities for enabling value for customers in the form of services.

Capabilities	Resources
Management	Financial Capital
Organization	Infrastructure
Process	Applications
Knowledge	Information
People (Experience and Skills)	People (Number of)

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value: Balancing Outcomes, Costs, and Risks

In the next few slides, we will focus on how a service provider should evaluate what their services should do and how their services should be provided to meet the needs of consumers by balancing outcomes, costs, and risks.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Outcomes and Outputs

It is important to be clear about the difference between outputs and outcomes.

Output: A tangible or intangible deliverable of an activity.

Outcome: A result for a stakeholder enabled by one or more outputs.

Acting as a service provider, an organization produces outputs that help its consumers to achieve certain outcomes.

Note: It can be difficult for the provider to fully understand the outcomes that the consumers want to achieve. They should work together to define the desired outcomes.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Outcomes and Outputs

Example: Output vs. Outcome <i>Wedding Photography Service</i>	
Output	Outcome
Well-captured photographs	Preservation of memories
High-quality photo printing	Ability to recall the memories by looking at the album
Well-arranged photo album	

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Costs

Cost: The amount of money spent on a specific activity or resource.

From the service consumer's perspective, there are two types of costs involved in service relationships:

1. Costs removed from the consumer by the service (a part of the value proposition)
2. Costs imposed on the consumer by the service (the costs of service consumption)

Both types of costs are considered when the consumer assesses the value which they expect the service will create. To ensure that the correct decisions are made about the service relationship, it is important that both types of costs are fully understood.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Costs Removed vs. Costs Imposed by a Service Provider

Costs Removed by a Service Provider	Costs Imposed by a Service Provider
Cost of staff	Price charged by the service provider
Cost of technology	Service provider staff training
Cost of other resources	Network utilization, etc.

As previously stated, both types of cost are considered when the consumer assesses the value which they expect the service will create. To ensure that the correct decisions are made about the service relationship, it is important that both types of costs are fully understood.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Risks

Risk: A possible event that could cause harm or loss or make it more difficult to achieve objectives. Risk can also be defined as the uncertainty of the outcome and can be used in the context of measuring the probability of positive outcomes as well as negative outcomes.

As with costs, there are two types of risks that are of concern to service consumers:

1. Risks removed from a consumer by the service (part of the value proposition)
2. Risks imposed on a consumer by the service (risks of service consumption)

It is the duty of the provider to manage the detailed level of risk on behalf of the consumer. This should be handled based on a balance of what matters most to the consumer and the provider.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Example Risks Removed vs. Risks Imposed

Risks removed by a service provider	Risks imposed by a service provider
Failure of consumer hardware	Service provider closing the business
Lack of staff availability	Information security breach
Lack of expertise	Loss of network connectivity between consumer and vendor, etc.

In some cases, a service cannot completely remove risk but may only reduce a consumer's risks. The consumer may determine that this reduction is sufficient to support the value proposition.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Offering

Service Offering: A description of one or more services, designed to address the needs of a target consumer group. Offerings may include goods, access to resources, and service actions.

Component	Description	Example
Goods	- Supplied to the consumer - Ownership is transferred to the consumer - Consumer takes responsibility for future use	- A mobile phone - A physical server
Access to resources	- Ownership is not transferred to the consumer - Access is granted or licensed to the consumer under agreed terms and conditions - The consumer can only access the resources during the agreed consumption period and according to other agreed service terms	- Access to the mobile network - Access to network storage
Service Actions	- Performed by the service provider to address a consumer's needs - Performed according to an agreement with the consumer	- User support - Replacement of a piece of equipment

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Offering Continued

Services are offered to target consumer groups, and those groups may be either internal or external to the service provider organization.

Different offerings can be created based on the same product, which allows it to be used in multiple ways to address the needs of different consumer groups.

For example, a software service can be offered as a limited free version or as a comprehensive paid-for version, based on one product of the service provider.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Service Relationships

Service relationship: A cooperation between a service provider and service consumer. Service relationships include service provision, service consumption, and service relationship management.

To create value, an organization must do more than simply provide a service. It must also cooperate with the consumers in service relationships.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Service Relationships

Service relationships are established between two or more organizations to co-create value. In a service relationship, organizations will take on the roles of service providers or service consumers.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Service Relationship Model

- A service provider's services create new customer resources:
 - A training service improves the skills of the consumer's employees
 - A broadband service allows the consumer's computers to communicate
 - A rental car service enables the consumer's staff to visit clients
- A service consumer can then take the new resources to offer services downstream as a service provider to **their** customers.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Copyright Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved. (Figure 2.1 ITIL® Foundation, ITIL 4 Edition, p. 15).

Service Provision

Service provision: Activities performed by an organization to provide services.

Service provision includes:

- Management of the provider's resources configured to deliver the service
- Access to these resources for users
- Fulfilment of the agreed service actions
- Service level management and continual improvement

Service provisions may also include the supplying of goods.

Service Consumption and Service Relationship Management

Service consumption: Activities performed by an organization to consume services.

Service consumption includes:

- Management of the consumer's resources needed to use the service
- Service actions performed by users

Service consumption may also include the receiving (acquiring) of goods.

Service relationship management: Joint activities performed by a service provider and a service consumer to ensure continual value co-creation based on agreed and available service offerings.

Sample Question

What is the definition of a warranty?

- A. A tangible or intangible deliverable that is produced by carrying out an activity
- B. The assurance that a product or service will meet agreed requirements
- C. A possible event that could cause harm or loss or make it more difficult to achieve objectives
- D. The functionality offered by a product or service to meet a particular need

Sample Question

Identify the missing word(s) in the following sentence.

A service is a means of enabling value co-creation by facilitating _____ that customers want to achieve.

- A. The warranty
- B. Outcomes
- C. The utility
- D. Outputs

IT Service Management Lesson Summary

Based on this lesson, we can:

Recall the definition of (2.0, 2.2.2, 2.3.1, 2.5.4):

- Service
- Utility
- Warranty
- Customer
- User
- Service Management
- Sponsor

IT Service Management Lesson Summary (Continued)

Describe the key concepts of creating value with services (2.1, 2.1.1, 2.2, and all subsections of 2.5):

- Cost
- Value
- Organization
- Outcome
- Output
- Risk
- Utility
- Warranty

Lesson Three: ITIL® Guiding Principles

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Guiding Principles Lesson Objectives

The objective of this lesson is to:

Describe the nature, use, and interaction of the guiding principles

Explain the use of the guiding principles:

- Focus on value
- Start where you are
- Progress iteratively with feedback
- Collaborate and promote visibility
- Think and work holistically
- Keep it simple and practical
- Optimize and automate

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

ITIL® Guiding Principles

ITIL® Guiding principle is a recommendation that guides an organization in all circumstances, regardless of changes in its goals, strategies, type of work, or management structure.

- It is universal and enduring.
- The guiding principles encourage and support organizations in continual improvement at all levels.
- These principles are also reflected in many other frameworks, methods, standards, philosophies, and/or bodies of knowledge, such as Lean, Agile, DevOps, and COBIT. This allows organizations to effectively integrate the use of multiple methods into an overall approach to service management.
- The guiding principles are universally applicable to nearly any initiative and to relationships with all stakeholder groups.
- The guiding principles are intended to help an organization adopt and adapt ITIL® guidance.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

ITIL® Guiding Principles

- Focus on value
- Start where you are
- Progress iteratively with feedback
- Collaborate and promote visibility
- Think and work holistically
- Keep it simple and practical
- Optimize and automate

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

First Guiding Principle: Focus on Value

Everything the organization does should link back directly or indirectly to value itself, its customers, and other stakeholders.

It can achieve this by understanding:

- Who is the service consumer?
- What are the consumer's perspectives of value?
- How to improve the customer's experience?

**FOCUS ON
VALUE**

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Applying the Principle: Focus on Value

The following can be considered while applying the principle, “focus on value”:

- Know how service consumers use each service.
- Encourage a focus on value among all staff.
- Focus on value during normal operational activity as well as during improvement initiatives.
- Include a focus on value in every step of any improvement initiative.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Second Guiding Principle: Start Where You Are

Do not start from scratch and build something new without considering what is already available to be leveraged.

There is likely to be a great deal in the current services, processes, programs, projects, and people that can be used to create the desired outcome.

An organization can implement “**start where you are**” by:

- **Assessing where you are:**
 - Services and methods already in place should be measured and/or observed directly to properly understand their current state and what can be reused from them.
 - Decisions on how to proceed should be based on information that is as accurate as possible.
- **The role of measurement:**
 - The use of measurement is important to this principle. It should, however, be used to support the analysis of what has been observed rather than to replace it, as over-reliance on data analytics and reporting can unintentionally introduce biases and risks in decision-making.

**START WHERE
YOU ARE**

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Applying the Principle: Start From Where You Are

To apply “**start from where you are**” successfully:

- Look at what exists as objectively as possible, using the customer, or the desired outcome, as the starting point.
- When examples of successful practices or services are found in the current state, determine if and how these can be replicated or expanded upon to achieve the desired state.
- Apply your risk management skills.
- Recognize that sometimes nothing from the current state can be reused.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Third Guiding Principle: Progress Iteratively With Feedback

Do not attempt to do everything at once. Even huge initiatives must be accomplished iteratively.

By organizing work into smaller, manageable sections that can be executed and completed in a timely manner, it is easier to maintain a sharper focus on each effort.

PROGRESS
ITERATIVELY
WITH FEEDBACK

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Third Guiding Principle: Progress Iteratively With Feedback

The role of feedback:

Using feedback before, throughout, and after each iteration will ensure that actions are focused and appropriate, even if circumstances should change. Once received, feedback can be analyzed to identify improvement opportunities, risks, and issues.

Feedback loop: A term commonly used to refer to a situation where part of the output of activity is used for new input. In a well-functioning organization, feedback is actively collected and processed along the value chain.

Having appropriate feedback loops between the participants of the activity gives them a better understanding of where their work comes from, where their outputs go and how their actions and outputs affect the outcomes, which in turn enables them to make better decisions.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Applying the Principle: Progress Iteratively With Feedback

Consider the following while applying “progress iteratively with feedback”:

- Comprehend the whole but do something
- The ecosystem is constantly changing, so feedback is essential.
- Fast does not mean incomplete.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Fourth Guiding Principle: Collaborate and Promote Visibility

Working together across boundaries produces results that have greater buy-in, more relevance to objectives, and a better likelihood of long-term success.

- Achieving objectives requires information, understanding, and trust. Work and consequences should be made visible, hidden agendas should be avoided, and information should be shared to the greatest degree possible.
- Recognition of the need for genuine collaboration has been one of the driving factors in the evolution of what is now known as DevOps.
- The following can be kept in mind while implementing this principle:
 - Whom to collaborate with
 - Communication for improvement
 - Increasing urgency through visibility

**COLLABORATE
AND PROMOTE
VISIBILITY**

aci
LEARNING

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Applying the Principle: Collaborate and Promote Visibility

To apply “collaborate and promote visibility” successfully, consider this advice:

- Collaboration does not mean consensus
- Communicate in a way the audience can hear
- Decisions can only be made on visible data

Insufficient visibility of work leads to poor decision-making, which in turn impacts the organization's ability to improve internal capabilities. To avoid this, the organization needs to perform critical analysis activities such as:

- Understanding the flow of work in progress
- Identifying bottlenecks, as well as excess capacity
- Uncovering waste

aci
LEARNING

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Fifth Guiding Principle: Think and Work Holistically

No service, or element used to provide a service, stands alone.

The outcomes achieved by the service provider and service consumer will suffer unless the organization works on the service as a whole, not just on its parts.

Results are delivered to internal and external customers through the effective and efficient management and dynamic integration of information, technology, organization, people, practices, partners, and agreements, which should all be coordinated to provide a defined value.

**THINK
AND WORK
HOLISTICALLY**

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Applying the Fifth Principle: Think and Work Holistically

To apply “think and work holistically” successfully, consider this advice:

- Recognize the complexity of the systems
- Collaboration is key to thinking and working holistically
- Where possible, look for patterns in the needs of and interactions between system elements
- Automation can facilitate working holistically

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Sixth Guiding Principle: Keep it Simple and Practical

If a process, service, action, or metric provides no value or produces no useful outcome, eliminate it.

In a process or procedure, use the minimum number of steps necessary to accomplish the objective(s). Always use outcome-based thinking to produce practical solutions that deliver results.

Some elements to keep in mind while implementing this principle:

1. Judging what to keep
2. Conflicting objectives

**KEEP IT SIMPLE
AND PRACTICAL**

aci
LEARNING

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Applying the Sixth Principle: Keep it Simple and Practical

- Ensure value in every activity
- Simplicity is the ultimate sophistication
- Do fewer things but do them better
- Respect the time of the people involved
- Simplicity is the best route to achieving quick wins
- Easier to understand; more likely to adopt

aci
LEARNING

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Seventh Guiding Principle: Optimize and Automate

Resources of all types, particularly human resources (HR), should be used most effectively.

Eliminate anything that is truly wasteful and use technology to achieve whatever it is capable of. Human intervention should only happen where it really contributes value.

**OPTIMIZE AND
AUTOMATE**

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Optimize and Automate: The Road to Optimization

1. Understanding and agreeing on the context in which the proposed optimization exists. This includes agreeing on the overall vision and objectives of the organization.
2. Assessing the current state of the proposed optimization to understand where it can be improved, and which improvement opportunities are likely to produce the biggest positive impact.
3. Agreeing on what the future state and priorities of the organization should be, focusing on simplification and value. This typically also includes standardization of practices and services, which will make it easier to automate or optimize further at a later point.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Seventh Guiding Principle: Optimize and Automate Continued

4. Ensuring the optimization has the appropriate level of stakeholder engagement and commitment.
5. Executing the improvements in an iterative way, using metrics and other feedback to check progress, stay on track, and adjust the approach to the optimization as needed.
6. Continually monitoring the impact of optimization to identify opportunities to improve methods of working.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Applying the Seventh Principle: Optimize and Automate

To apply “optimize and automate” successfully, consider this advice:

- Simplify and/or optimize before automating
- Define your metrics
- Use the other guiding principles when applying this one

Sample Question

Which describes the principle “think and work holistically”?

- A. Conducting a review of existing service management practices and decide what to keep and what to discard
- B. Reviewing how an improvement initiative can be organized into smaller, manageable sections that can be completed in a timely manner
- C. Reviewing service management practices and removing any unnecessary complexity
- D. Using all aspects of service management to ensure coordination of all aspects of an improvement initiative

Guiding Principles Lesson Summary

Based on this lesson, we can:

Describe the nature, use, and interaction of the guiding principles (4.3, 4.3.8)

Explain the use of the guiding principles (4.3):

- Focus on value (4.3.1 – 4.3.1.4)
- Start where you are (4.3.2 – 4.3.2.3)
- Progress iteratively with feedback (4.3.3 – 4.3.3.3)
- Collaborate and promote visibility (4.3.4 – 4.3.4.4)
- Think and work holistically (4.3.5 – 4.3.5.1)
- Keep it simple and practical (4.3.6 – 4.3.6.3)
- Optimize and automate (4.3.7 – 4.3.7.3)

Lesson Four: Four Dimensions of Service Management

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Four Dimensions of Service Management: Lesson Objectives

The objective of this lesson is to:

Describe the four dimensions of service management:

- Organizations and people
- Information and technology
- Partners and suppliers
- Value streams and processes

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Four Dimensions of Service Management

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The First Dimension: Organizations and People

The first dimension of service management is **organizations and people**.

The complexity of organizations is growing, and it is important to ensure that the way an organization is structured and managed, as well as its roles, responsibilities, and systems of authority and communication, are well-defined and support its overall strategy and operating model.

People (whether customers, employees of suppliers, employees of the service provider, or any other stakeholder in the service relationship) are a key element in this dimension.

Attention should be paid not only to the skills and competencies of teams or individual members but also to management and leadership styles and to communication and collaboration skills.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

The Second Dimension: Information and Technology

The second dimension of service management is **information and technology**.

This dimension includes the information and knowledge necessary for service management, as well as the technologies required.

Examples of technologies that support service management:

1. **Workflow management systems**
2. **Knowledge bases**
3. **Inventory systems**
4. **Communication systems**
5. **Analytical tools**

Service management increasingly benefits from technology development. Artificial intelligence, mobile platforms, cloud solutions, remote collaboration tools, automated testing and deployment tools, machine learning, and other cognitive computing solutions are used at all levels.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

The Third Dimension: Partners and Suppliers

The third dimension of service management is **partners and suppliers**.

Every organization and every service depends to some extent on services provided by other organizations.

Examples	Form of cooperation	Outputs	Responsibility for the outputs	Responsibility for achievement of the outcomes	Level of formality
Procurement of computers and phones	Goods supply	Good supplied	Supplier	Customer	Formal supply contract/invoices
Cloud computing (infrastructure or platform as a service)	Service delivery	Services delivered	Provider	Customer	Formal agreements flexible cases
Employee onboarding (shared between HR, facilities, and IT)	Service partnership	Value co-created	Shared between provider and customer	Shared between provider and customer	Shared generic goals agreements, flexible case-based arrangements

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Fourth Dimension: Value Streams and Processes

The fourth dimension of service management is **value streams and processes**.

It defines the activities, workflows, controls, and procedures needed to achieve agreed objectives.

Value Stream: A series of steps an organization undertakes to create and deliver products and services to consumers.

Identifying and understanding the various value streams an organization has is critical to improving its overall performance.

Processes: A set of interrelated or interacting activities that transform inputs into outputs. A process takes one or more defined inputs and turns them into defined outputs. Processes define the sequence of actions and their dependencies.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The 4Ds #4. Value Streams & Processes: Value Stream Structure

Value Chain Activity: A step in the value chain that an organization makes in the creation of value.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

External Factors Influencing the Four Dimensions

The four dimensions are constrained or influenced by several external factors that are often beyond the control of the organization.

Political, Economic, Social, Technological, Legal, and Environmental are factors that may constrain or influence how a service provider operates.

For example:

- Government and societal attitudes towards environmentally-friendly products and services might result in the organization investing more in tools and technologies that meet external expectations.
- Economic and societal factors might influence organizations to create several versions of the same product to address various consumer groups that show different buying patterns.
- Data protection laws or regulations (like GDPR) have changed how companies must collect, process, access, and store customer data, as well as how they work with external partners and suppliers.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Four Dimensions of Service Management

- The four dimensions represent a holistic approach to service management, and organizations should ensure that there is a balance of focus between each dimension.
- The impact of external factors on the four dimensions should also be considered (The external factors, PESTLE, are not exam testable).
- All four dimensions and the external factors that affect them should be addressed as they evolve, considering emerging trends and opportunities.
- It is essential that an organization's Service Value System (covered in the next chapter) is considered from all four dimensions, as the failure to adequately address or account for one dimension, or an external factor, can lead to sub-optimal products and services.

Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Value System: Lesson Objectives

The objective of this lesson is to:

Understand the purpose and components of the ITIL® Service Value System.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Value System (SVS) Overview

For service management to function properly, it needs to work as a system.

The ITIL® SVS describes the inputs to this system (opportunity and demand), the elements of this system (organizational governance, service management, continual improvement, and the organization's capabilities and resources), and the outputs (achievement of organizational objectives and value for the organization, its customers, and other stakeholders).

Each organization's SVS has interfaces with other organizations, forming an ecosystem that can, in turn, facilitate value for those organizations, their customers, and other stakeholders.

The ITIL SVS describes how all the components and activities of the organization work together as a system to enable value creation.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The ITIL® Service Value System

The purpose of the SVS is to ensure that the organization continually co-creates value with all stakeholders through the use and management of products and services.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

The ITIL® Service Value System

Opportunities represent options or possibilities to add value for stakeholders or otherwise improve the organization. **Demand** is the need or desire for products and services among internal and external consumers.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

The ITIL® Service Value System

The outcome of the SVS is **value**. The SVS can enable the creation of many different types of value for a wide group of stakeholders.

aci
LEARNING

The ITIL® Service Value System

Governance is the means by which an organization is directed and controlled. Organizational governance evaluates, directs, and monitors all the organization's activities.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Governance: Governance Activities

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Governance: The Evaluate Activity

- Governing body evaluates the organization's:
 - Strategy
 - Portfolios (e.g. Service, Product, Project, or Supplier portfolios)
 - Relationships with other parties
- Reviewed on a regular basis as stakeholders needs and external circumstances evolve.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Governance: The Direct Activity

- Defines organizational strategies.
- Sets the direction and prioritization.
 - Organizational activity
 - Future investment
- Policies establish the boundaries for behavior across the organization and with suppliers, partners, and other stakeholders
 - What is permitted
 - What is not permitted
- Organizations are then responsible to:
 - Execute the strategy
 - Comply with the policies
- *Training is a method to execute the strategies & policies to leverage compliance*

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

3

Governance: The Monitor Activity

- Monitor organizational performance.
 - Value streams, practices, products, and services to execute the strategy
 - Compliance with policies via automation, inspections, and quality checks
- Use monitoring data as feedback to subsequent evaluation and direction.
 - Data may come from assessments, audits, benchmarks, &/or reports

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

4

The Role of Governance in the Service Value System

- Begins at the top, but may have parts delegated (e.g., IT governance).
- Fundamental to the SVS, and subject to continual improvement.
- Uses ITIL guiding principles or tailors them as needed to meet organization needs.
- Needs to have visibility into improvement activities and value delivery.

Copyright © ACI Learning. All Rights Reserved.

Guidelines for Establishing Governance in the Service Value System

- Service value chain and the practices must work in line with the direction given by the governing body.
- Governing body of the organization, either directly or through delegation of authority, maintains oversight of the SVS.
- Governing body and management at all levels maintain alignment through a clear set of shared principles and objectives.
- Governance and management at all levels are continually improved to meet expectations of the stakeholders.

aci
LEARNING

The Service Value Chain

An operating model for service providers that covers all the key activities required to effectively manage products and services.

- **Value streams describe activities an organization takes in the creation of value:**
 - Convert inputs into outputs
 - Activities may trigger other activities
- Value chain activities use different combinations of ITIL practices:
 - Internal or third-party resources
 - **Processes**
 - Skills and competencies

Service Value Chain: Lesson Objectives

The objective of this lesson is to:

- Describe the interconnected nature of the service value chain and how this supports value streams
- Describe the inputs, outputs, and purpose of each value chain activity:
 - Plan
 - Improve
 - Engage
 - Design & transition
 - Obtain/build
 - Deliver & support

Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Value Chain

The central element of the Service Value System is the service value chain, an operating model which outlines the key activities required to respond to demand and facilitate value creation through the creation and management of products and services.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Service Value Chain: Service Value Chain Activities

Activity	Description
Plan	Ensure shared understanding of vision, current status, & improvement direction. Relevant planning activities at all levels: strategic, architectural, program/project, and so on.
Improve	Ensure continual improvement. Execution of improvement activities and provision of improvement information. Provide improvement plans and status.
Engage	Understand stakeholder needs, facilitate transparency, & continually engage. Interactions include users, customers, suppliers, and other stakeholders.
Design and Transition	Ensure products and services meet expectations for cost, quality, and time-to-market. Creation of new or changed solution designs; management and implementation of change.
Obtain/Build	Acquisition or building of components, whether acquired from a third party or built in-house. Ensure service components are available when & where needed per specifications.
Deliver and Support	Day-to-day delivery of solutions; support for user needs related to the services.

Copyright © ACI Learning. All Rights Reserved.
 Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Service Value Chain: SVC Inputs and Outputs

- Inputs are received from other **activities** of the SVC.
- Outputs are produced and used elsewhere in the SVC.
- The Input/Output relationships:
 - Are interconnected in a complex and dense manner.
 - Support the interactions among all activities in the SVC.
- The Input/Output relationships are *not*:
 - Always Linear
 - Always One-to-one
- The Input/Output relationships can be:
 - Linear
 - One-to-one
 - One-to-many
 - Many-to-one

Copyright © ACI Learning. All Rights Reserved.
 Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Plan

The purpose of the **plan** chain activity is to ensure a shared understanding of the vision, current status, and improvement direction for all four dimensions and all products and services across the organization.

Inputs for this value chain activity	Outputs for this value chain activity
• Policies, requirements and constraints provided by the organization's governing body • Consolidated demands and opportunities provided by engage • Value chain performance information, improvement initiatives and plans provided by improve • Improvement status reports from improve • Knowledge and information about new and changed products and services from design and transition and obtain/build • Knowledge and information about third-party service components from engage	▪ Strategic, tactical and operational plans ▪ Portfolio decisions for design and transition ▪ Architectures and policies for design and transition ▪ Improvement opportunities for improve ▪ Product and service portfolio for engage ▪ Contract and agreement requirements for engage

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Plan

- Fundamental part of planning is prioritizing different alternatives and making decisions.
- During this activity, you create strategic plans, project plans, and service plans.
- One must consider all four dimensions of service management to ensure a holistic approach.
- All other SVC activities will use and apply plans from this activity.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Improve

The purpose of the **improve** value chain activity is to ensure continual improvement of products, services, and practices across all value chain activities and the four dimensions of service management.

Inputs for this value chain activity	Outputs for this value chain activity
- Product and service performance information provided by deliver and support - Stakeholders' feedback provided by engage - Performance information and improvement opportunities provided by all value chain activities - Knowledge and information about new and changed products and services from design and transition and obtain/build - Knowledge and information about third-party service components from engage	- Improvement initiatives and plans for all value chain activities - Value chain performance information for plan and the governing body - Improvement status reports for all value chain activities - Contract and agreement requirements for engage service performance information for design and transition

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Engage

The purpose of the **engage** value chain activity is to provide a good understanding of stakeholder needs, transparency, and continual engagement, and good relationships with all stakeholders.

- Engage with different stakeholders, **primarily service consumers**, using different practices. For example:
 - Operational day-to-day collaboration with Users in Service Desk practice.**
 - Operational &/or Tactical engagement with Customers through Service Level Management practice.**
 - Strategic & tactical engagement with Sponsors through Relationship Management practice.**
 - Strategic/Tactical/Operational engagement with Suppliers via Supplier Management practice**

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Engage

Inputs for this value chain activity	Outputs for this value chain activity
- Product and service portfolio provided by plan - High level demand for services and products provided by internal and external customers - Detailed requirements for services and products provided by customers - Requests and feedback from customers - Incidents, service requests and feedback from users - Information on the completion of user support tasks from deliver and support - Market opportunities from current and potential customers and users - Cooperation opportunities and feedback provided by partners and suppliers - Contract and agreement requirements from all value chain activities - Knowledge and information about new and changed products and services from design and transition and obtain/build - Knowledge and information about third party service components from suppliers and partners - Product and service performance information from deliver and support - Improvement initiatives and plans from improve - Improvement status reports from improve	- Consolidated demands and opportunities for plan - Product and service requirements for design and transition - User support tasks for deliver and support - Improvement opportunities and stakeholders' feedback for improve - Change or project initiation requests for obtain/build - Contracts and agreements with external and internal suppliers and partners for obtain/build and design and transition - Knowledge and information about third-party service components for all value chain activities - Service performance reports for customers

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Design and Transition

The purpose of the **design and transition** value chain activity is to ensure that products and services continually meet stakeholder expectations for quality, costs, and time-to-market.

Inputs for this value chain activity	Outputs for this value chain activity
- Portfolio decisions provided by plan - Architectures and policies provided by plan - Product and service requirements provided by engage - Improvement initiatives and plans provided by improve - Improvement status reports from improve - Service performance information provided by deliver and support and improve - Service components from obtain/build - Knowledge and information about third-party service components from engage - Knowledge and information about new and changed products and services from obtain/build	- Requirements and specifications for obtain/build - Contract and agreement requirements for engage - New and changed products and services to deliver and support - Knowledge and information about new and changed products and services to all value chain activities - Performance information and improvement opportunities for improve

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Service Value Chain: The Design and Transition Activity

- As customer needs change, necessary activities are adjusted accordingly.
- “Design” activity requires:
 - The plan, the architecture information, customer requirements, and other Information from Engage.
 - Component information to/from Obtain/Build.
- “Transition”
 - Build’ product &/or service using components from Obtain/Build
 - Transfer knowledge of the improved product or service to other SVC activities
 - Transfer assets to Deliver & Support
 - Testing, Pilots, Deployments, & Releases

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Obtain/Build

The purpose of the **obtain/build** value chain activity is to ensure that service components are available when and where they are needed and meet agreed specifications.

Inputs for this value chain activity	Outputs for this value chain activity
▪ Architectures and policies provided by plan ▪ Contracts and agreements with external and internal suppliers and partners provided by engage ▪ Goods and services provided by external and internal suppliers and partners ▪ Requirements and specifications provided by design and transition ▪ Improvement initiatives and plans provided by improve ▪ Improvement status reports from improve ▪ Change or project initiation requests provided by engage ▪ Change requests provided by deliver and support ▪ Knowledge and information about new and changed products and services from design and transition ▪ Knowledge and information about third-party service components from engage	▪ Service components for deliver and support ▪ Service components for design and transition ▪ Knowledge and information about new and changed service components to all value chain activities ▪ Contract and agreement requirements for engage ▪ Performance information and improvement opportunities for improve

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Value Chain Activity: Obtain/Build

- A large part of this activity is determining whether to obtain or build.
- To assist in decision making, consider if the capacity to build is readily available and strategic to the organization's competitiveness.
- If a third party has economies of scale that make it more cost-effective to buy, then buy.
- Whenever components need to be built or acquired, they are acquired through the Obtain/Build activity.
 - They are then used by Transition to configure them into products & services

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Value Chain Activity: Deliver and Support

The purpose of the **deliver and support** value chain activity is to ensure that services are delivered and supported according to agreed specifications and stakeholders' expectations.

Inputs for this value chain activity	Outputs for this value chain activity
▪ New and changed products and services provided by design and transition ▪ Contracts and agreements with external and internal suppliers and partners provided by engage ▪ Service components provided by obtain/build ▪ Improvement initiatives and plans provided by improve ▪ Improvement status reports from improve ▪ User support tasks provided by engage ▪ Knowledge and information about new and changed service components and services from design and transition and obtain/build ▪ Knowledge and information about third-party service components from engage	▪ Service components for delivery and support ▪ Service components for design and transition ▪ Knowledge and information about new and changed service components to all value chain activities ▪ Contract and agreement requirements for engaging ▪ Performance information and improvement opportunities to improve

Service Value System: Lesson Summary

Based on this lesson, we can:

- Describe the interconnected nature of the service value chain and how this supports value streams (4.5)
- Describe the inputs, outputs, and purpose of each value chain activity (4.5.1-4.5.6):
 - Plan
 - Improve
 - Engage
 - Design & Transition
 - Obtain/Build
 - Deliver & Support

Practices: Lesson Objectives

The objective of this lesson is to:

Recall the purpose of the following ITIL® practices:

- Information security management
- Relationship management
- Supplier management
- IT asset management
- Monitoring and event management
- Release management
- Service configuration management
- Deployment management
- Continual improvement
- Change enablement
- Incident management
- Problem management
- Service request management
- Service desk
- Service level management

ITIL® Management Practices

In ITIL®, a management practice is a set of organizational resources designed for performing work or accomplishing an objective.

There are a total of 34 ITIL® management practices, classified into General Management Practices (14), service management practices (17), and technical management practices (3):

- General management practices have been adopted/adapted for service management from general business management domains
- Service management practices have been developed in service management and ITSM industries
- Technical management practices have been adapted from technology management domains for service management purposes by expanding or shifting their focus from technology solutions to IT services

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

ITIL® Management Practices

General Management Practices	Service Management Practices	Technical Management Practices
1. Architecture management 2. Continual improvement 3. Information security management 4. Knowledge management 5. Measurement and reporting 6. Organizational change management 7. Portfolio management 8. Project management 9. Relationship management 10. Risk management 11. Service financial management 12. Strategy management 13. Supplier management 14. Workforce and talent management	1. Availability management 2. Business analysis 3. Capacity and performance management 4. Change enablement 5. Incident management 6. IT asset management 7. Monitoring and event management 8. Problem management 9. Release management 10. Service catalog management 11. Service configuration management 12. Service continuity management 13. Service design 14. Service desk 15. Service level management 16. Service request management 17. Service validation and testing	1. Deployment management 2. Infrastructure and platform management 3. Software development and management

ITIL® Management Practices

At the foundation level, we are required to have an overview of 15 ITIL practices and understand in detail 7 of the ITIL practices.

These will be covered in this and the next chapter.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Information Security Management

The purpose of the **information security management** practice is to protect the information needed by the organization to conduct its business.

This includes understanding and managing risks to the confidentiality, integrity and availability of information, as well as other aspects of information security such as authentication (ensuring someone is who they claim to be), and non-repudiation (ensuring that someone can't deny that they took an action).

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Information Security Management

The purpose of the **information security management** practice is to protect the information needed by the organization to conduct its business.

ISM operates primarily in three phases:

- Prevent
- Detect
- Correct

Copyright © ACI Learning. All Rights Reserved.

aci
LEARNING

Relationship Management

The purpose of the **relationship management** practice is to establish and nurture the links between the organization and its stakeholders at strategic and tactical levels.

The relationship management practice ensures that:

- Stakeholders' needs and drivers are understood, and products and services are prioritized appropriately
- Stakeholders' satisfaction is high, and a constructive relationship between the organization and stakeholders is established and maintained
- Customers' priorities for new or changed products and services, in alignment with desired business outcomes, are effectively established and articulated

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Relationship Management

The relationship management practice ensures that (continued):

- Any stakeholders' complaints and escalations are handled well through a sympathetic (yet formal) process
- Products and services facilitate value creation for the service consumers as well as for the organization
- Organization facilitates value creation for all stakeholders, in line with the organization's strategy and priorities
- Conflicting stakeholder requirements are mediated appropriately

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Relationship Management

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Supplier Management

Purpose: To ensure that the organization's suppliers and their performance are managed appropriately to support the provision of seamless, quality products and services.

- Create closer, more collaborative relationships.
- Uncover and realize new value.
- Reduce risk of failure.
- Key activities include:
 - Create a single point of visibility and control to ensure consistency.
 - Maintain a supplier strategy, policy, and contract management information.
 - Negotiate and agree on contracts and arrangements.
 - Manage relationships and contracts with internal and external suppliers.
 - Manage supplier performance (to SLA targets)
 - Contract renewal or termination

14

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Supplier Management

The way Supplier policies are created can depend on multiple factors.

This can include considering corporate culture to create closer, more collaborative relationships with key suppliers to uncover and realize new value and reduce the risk of failure.

Supplier Models:

Insourcing

Outsourcing

Single-source/
partnership

Multi-sourcing

Copyright © ACI Learning. All Rights Reserved.

Supplier Management

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

IT Asset Management

The purpose of the **IT asset management** practice is to plan and manage the full lifecycle of all IT assets to help the organization:

- Maximize value
- Control costs
- Manage risks
- Support decision-making about the purchase
- Reuse and retirement of assets
- Meet regulatory and contractual requirements

Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

IT Asset Management

IT asset management typically includes the following activities:

- Define, populate and maintain the asset register in terms of structure and content, and the storage facilities for assets and related media
- Control the asset lifecycle in collaboration with other practices (for example upgrading obsolete software or on boarding new staff members with a laptop and mobile phone) and record all changes to assets (status, location, characteristics, assignment, etc.)
- Provide current and historical data, reports and support to other practices about IT assets
- Audit assets, related media and conformity (particularly with regulations, and license terms and conditions), and drive corrective and preventive improvements to deal with detected issues

IT Asset: Any valuable component that can contribute to the delivery of an IT product or service.

Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

IT Asset Management

Copyright © ACI Learning. All Rights Reserved.

aci
LEARNING

Monitoring and Event Management

The purpose of the **monitoring and event management** practice is to systematically observe services and service components and record and report selected changes of state identified as events.

The monitoring part of the practice focuses on the systematic observation of services and the CIs that underpin services to detect conditions of potential significance.

The event management part of the practice focuses on recording and managing those monitored changes of state that are defined by the organization as an event, determining their significance, and identifying and initiating the correct control action to manage them.

Event: An event can be defined as any change of state that has significance for the management of a configuration item (CI) or IT service. Events are typically recognized through notifications created by an IT service, CI, or monitoring tool.

Monitoring and Event Management

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Release Management

The purpose of the **release management** practice is to make new and changed services and features available for use.

A release may comprise many different infrastructure and application components that work together to deliver new or changed functionality.

It may also include documentation, training (for users or IT staff), updated processes or tools, or any other components that are required.

Each component of a release may be developed by the service provider or procured from a third party and integrated by the service provider.

Service Configuration Management

The purpose of the **service configuration management** practice is to ensure that accurate and reliable information about the configuration of services and the CIs that support them is available when and where it is needed. This includes information on how CIs are configured and the relationships between them.

Service configuration management collects and manages information about a wide variety of CIs, typically including hardware, software, networks, buildings, people, suppliers, and documentation. Services are also treated as CIs, and configuration management helps the organization to understand how the many CIs that contribute to each service work together.

Configuration item: Any component that needs to be managed in order to deliver an IT service.

aci
LEARNING

Deployment Management

The purpose of the **deployment management** practice is to move new or changed hardware, software, documentation, processes, or any other component to live environments.

It may also be involved in deploying components to other environments for testing or staging.

Deployment management works closely with release management and change enablement but is a separate practice.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

How Deployment is Evolving

- Traditionally, deployment is a high-risk event.
- Change errors are a major cause of incidents.
- New practices, such as Agile and DevOps, attempt to make deployment activities more routine and frequent to minimize the incidents and errors.
- Additional technical practices that have been successful include:
 - Automating the deployment pipeline.
 - Emphasizing high quality.
 - Using automated testing methods.
 - Using small batch sizes.
 - Maintaining rigorous version control of applications and environments.

aci
LEARNING

Continual Improvement

The purpose of the **continual improvement** practice is to align the organization's practices and services with changing business needs through the ongoing identification and improvement of services, service components, practices, or any element involved in the efficient and effective management of products and services.

Included in the scope of the continual improvement practice is the development of improvement-related methods and techniques and the propagation of a continual improvement culture across the organization, in alignment with the organization's overall strategy.

aci
LEARNING

Problem Management

The purpose of **problem management** is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents and managing workarounds and known errors.

Problem: A cause, or potential cause, of one or more incidents.

Known error: A problem that has been analyzed and has not been resolved.

Workaround: A solution that reduces or eliminates the impact of an incident or problem for which a full resolution is not yet available. Some workarounds reduce the likelihood of incidents.

Service Request Management

The purpose of the **service level management** practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner.

Service Request: A request from a user or user's authorized representative that initiates a service action that has been agreed as a normal part of service delivery.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Request Management

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Desk

The **purpose** of the service desk practice is to capture demand for incident resolution and service requests.

It should also be the point of communication for the service provider with all of its users. In other words, it should act as the entry point/single point of contact for the IT or service organization.

Service desks provide a variety of channels for access:

- Phone calls
- Service portals and mobile applications
- Live chat and chatbots
- Email
- Walk-in service desks
- Text and social media messaging
- Public and corporate social media
- Discussion forums

Service Desk

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Level Management

The purpose of the **service level management** practice is to set clear business-based targets for service performance so that the delivery of a service can be properly assessed, monitored, and managed against these targets.

This practice involves the definition, documentation, and active management of service levels.

As services may involve a 'bundle' of varied and disparate activities, this means that a number of these activities need to be combined and aggregated together to reflect a realistic view.

Additional Practices (NON-EXAM TOPIC)

- There are a few practices that you will encounter quite a bit in your role as an IT professional that are not on the exam.
- Risk Management is used in almost every area of IT, but especially as an input in Change Enablement and Project Management.
- We mentioned Service Level Management and the need for both Utility and Warranty.
- Availability Management, Capacity and Performance Management, Service Continuity Management and Information Security Management are key for warranty and the development of SLAs.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Risk Management

The purpose of the **risk management** practice is to ensure that the organization understands and effectively handles risks. Managing risk is essential to ensuring the ongoing sustainability of an organization and creating value for its customers. Risk management is an integral part of all organizational activities and therefore central to the organization's SVS.

Risk is normally perceived as something to be avoided because of its association with threats, and although this is true, risk is also associated with opportunity.

- **Failure to take opportunities can be a risk in itself**

Risks need to be:

- **Identified**
- **Assessed**
- **Treated**

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Availability Management

The purpose of the **availability management** practice is to ensure that services deliver agreed levels of availability to meet the needs of the customer and users.

Availability: The ability of an IT service or other configuration item to perform its agreed function when required

Activities include:

- Negotiating and agreeing on targets
- Designing infrastructure and applications
- Ensuring services and components can collect data
- Monitoring, analyzing, and reporting
- Planning improvements

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Capacity & Performance Management

The purpose of the **capacity and performance management** practice is to ensure that services achieve agreed and expected performance, satisfying current and future demand in a cost-effective way.

Performance: A measure of what is achieved or delivered by a system, person, team, practice, or service.

Capacity: A measure of a service to handle inputs and outputs. (e.g., the total number of users logged in, the total number of transactions running, etc.).

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Continuity Management

The purpose of the **service continuity management** practice is to ensure that the availability and performance of a service are maintained at sufficient levels in case of a disaster. The practice provides a framework for building organizational resilience with the capability of producing an effective response that safeguards the interests of key stakeholders and the organization's reputation, brand, and value-creating activities.

Service continuity focuses on those events that the business considers significant enough to be treated as a disaster. Less significant events will be dealt with as part of incident management or major incident management. The distinction between disasters, major incidents, and incidents needs to be pre-defined, agreed upon, and documented with clear thresholds and triggers for calling the next tier of response and recovery into action without unnecessary delay and risk.

ITIL® Practices Summary

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Practices: Lesson Summary

Based on this lesson, we can:

Recall the purpose of the following ITIL® practices:

- Information security management (5.1.3)
- Relationship management (5.1.9)
- Supplier management (5.1.13)
- IT asset management (5.2.6)
- Monitoring and event management (5.2.7)
- Release management (5.2.9)
- Service configuration management (5.2.11)
- Deployment management (5.3.1)
- Continual improvement (5.1.2)
- Change enablement (5.2.4)
- Incident management (5.2.5)
- Problem management (5.2.8)
- Service request management (5.2.16)
- Service desk (5.2.14)
- Service level management (5.2.15)

Practices: Lesson Summary (Continued)

Based on this lesson, we can:

Recall the definitions of the following terms (5.2.4, 5.2.5, 5.2.6, 5.2.7, 5.2.8, 5.2.11):

- IT asset
- Event
- Configuration item
- Change
- Incident
- Problem
- Known error
- Workaround

Lesson Eight: ITIL® Key Practices

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Key Practices in Detail: Lesson Objectives

The objective of this lesson is to:

Explain the following ITIL ® practices in detail*:

- Continual improvement, including the continual improvement model
- Change enablement
- Incident management
- Problem management
- Service request management
- Service desk
- Service level management

*comprises 17 of the 40 exam questions

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Continual Improvement

As discussed earlier: The purpose of the **continual improvement** practice is to align the organization's practices and services with changing business needs through the ongoing identification and improvement of services, service components, practices, or any element involved in the efficient and effective management of products and services.

The commitment to and practice of continual improvement must be embedded into every fiber of the organization.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Key Activities of the Continual Improvement Practice

- Encouraging continual improvement across the organization
- Securing time and budget for continual improvement
- Identifying and logging improvement opportunities
- Assessing and prioritizing improvement opportunities
- Making business cases for improvement action
- Planning and implementing improvements
- Measuring and evaluating improvement results
- Coordinating improvement activities across the organization
- Creating a small dedicated team to lead continual improvement initiatives

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Continual Improvement Model

The ITIL® SVS includes the continual improvement model.

The continual improvement model can be applied to any type of improvement, from high-level organizational changes to individual services and configuration items.

The ITIL® continual improvement model can be used as a high-level guide to support improvement initiatives.

Use of the model increases the likelihood that ITSM initiatives will be successful, puts a strong focus on customer value, and ensures that improvement efforts can be linked back to the organization's vision.

The model supports an iterative approach to improvement, dividing work into manageable pieces with separate goals that can be achieved incrementally.

Continual Improvement Model Continued

Copyright © AXELOS Limited 2011. Material is reproduced under license from AXELOS Limited. All rights reserved.

Continual Improvement Model Continued

Step 1:

What is the vision? Each improvement initiative should support the organization's goals and objectives. The first step of the continual improvement model is to define the vision of the initiative. This provides context for all subsequent decisions and links individual actions to the organization's vision for the future.

Step 2:

Where are we now? The success of an improvement initiative depends on a clear and accurate understanding of the starting point and the impact of the initiative. An improvement can be thought of as a journey from Point A to Point B, and this step clearly defines what Point A looks like. A journey can't be mapped out if the starting point is not known.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Continual Improvement Model Continued

Step 3:

Where do we want to be? Just as the previous step describes Point A on the improvement journey, this step outlines what Point B, the target state for the next step of the journey, should look like. A journey can't be mapped out if the destination is not clear.

Step 4:

How do we get there? Now that the start and endpoints of the improvement journey have been defined, a specific route can be agreed upon.

Step 5:

Take action In this step, the plan for the improvement is acted upon. This could involve a traditional waterfall-style approach, but it could be more appropriate to follow an Agile approach by experimenting, iterating, changing directions or even going back to previous steps.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Continual Improvement Model Continued

Step 6:

Did we get there? This step involves checking the destination of the journey, ensuring the desired point has been reached.

Step 7:

How do we keep the momentum going? If the improvement has delivered the expected value, the focus of the initiative should shift to marketing these successes and reinforcing any new methods introduced. This is to ensure that the progress made will not be lost and to build support and momentum for the next improvements.

aci
LEARNING

Continual Improvement Methods and Techniques

- Improvements can be executed using the Continual Improvement model.
- Identify a team to focus on leading continual improvement activities—but continual improvement is everyone's responsibility.
- Engage customers, suppliers, partners, and other stakeholders as appropriate.
- Accurate data is critical to driving effective improvements.
- From the available methods and techniques, choose the most appropriate ones for your organization.
- Methods and techniques include:
 - LEAN methods focus on waste reduction
 - Agile methods focus on iterative improvement
 - DevOps methods focus on working holistically and successful implementation
 - Balanced Scorecard
 - SWOT (Strengths, Weaknesses, Opportunities, Threats) Analysis

Change Enablement

The purpose of the **change enablement** practice is to maximize the number of successful IT changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing a change schedule.

The scope of change enablement is defined by each organization and will typically include all IT infrastructure, applications, documentation, processes, supplier relationships, and anything else that might directly or indirectly impact a product or service.

aci
LEARNING

Change Enablement

Change Assessment:

All changes should be assessed by people who are able to understand the risks and the expected benefits and then authorized before they are deployed. This assessment, however, should not introduce unnecessary delay.

Change Authorization:

The person or group who authorizes a change is known as a change authority. It is essential that the correct change authority is assigned to each type of change to ensure that change enablement is both efficient and effective.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Change Enablement

There are three types of changes:

- 1. Standard changes:** These are low-risk, pre-authorized changes that are well-understood and fully documented and can be implemented without additional authorization.
- 2. Normal changes:** These are changes that need to be scheduled, assessed, and authorized following a standard process.
- 3. Emergency changes:** These are changes that must be implemented as soon as possible, for example, to resolve an incident or implement a security patch.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Incident Management

The purpose of **incident management** is to minimize the negative impact of incidents by restoring normal service operations as quickly as possible.

An incident is any unplanned interruption to a service or reduction in the quality of a service.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Incident Management

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Incident Management

Incident management can have an enormous impact on customer and user satisfaction and how they perceive the service provider.

Every incident should be logged and managed to ensure that it is resolved in a time that meets the expectations of the customer and user.

Target resolution times are agreed upon, documented, and communicated to ensure that expectations are realistic.

Incidents should be prioritized based on the agreed classification to ensure that incidents with the highest business impact are resolved first.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Incident Management Continued

Organizations should design their incident management practice to provide appropriate management and resource allocation to different types of incident.

Incidents with a low impact must be managed efficiently to ensure that they do not consume too many resources.

Incidents with a larger impact may require more resources and more complex management.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Incident Management Continued

There are usually separate processes for managing major incidents and for managing information security incidents.

Information about incidents should be stored in incident records in a suitable tool.

It is important that people working on an incident provide good quality updates in a timely fashion.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Incident Management Continued

Updates should include information about symptoms, business impact, configuration items affected, actions completed, and actions planned.

Each of these should have a timestamp and information about people involved so that people involved or interested can be kept informed.

Incidents may be diagnosed and resolved by people in many different groups, depending on the complexity of the issue or the incident type.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Incident Management Types

Some incidents will be resolved by the user using self-help. Use of specific self-help records should be captured for use in measurement and improvement activities.

Some incidents will be resolved by the service desk.

More complex incidents will usually be escalated to a support team for resolution. Typically, the routing is based on the incident category, which should help to identify the correct team.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Incident Management Types

Incidents can be escalated to suppliers or partners, who offer support for the products and services they supply.

The most complex incidents, and all major incidents, often require a temporary team to work together to identify the resolution. This team may include representatives of many stakeholders, including the service provider, suppliers, users, etc.

In some extreme cases, disaster recovery plans may be invoked to resolve an incident. Disaster recovery is described in the service continuity management practice.

aci
LEARNING

Problem Management

Every service has errors, flaws, or vulnerabilities that may cause incidents.

They may include errors in any of the four dimensions of service management. Some remain unidentified or unresolved and may be a risk to live services.

In ITIL®, these errors are called problems, and they are addressed by the problem management practice.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Problem vs. Incident

Problems are related to incidents but should be distinguished as they are managed in different ways.

Incident	Problem
Incidents have an impact on users or business processes and must be resolved so that normal business activity can take place.	Problems are the causes of incidents. They require investigation and analysis to identify the causes, develop workarounds, and recommend longer-term resolution. This reduces the number and impact of future incidents.

aci
LEARNING

Problem Management Phases

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Problem Management Phases

Problem identification: Activities identify and log problems.

Problem control: Activities include problem analysis and documenting workarounds and known errors.

Error control: Activities manage known errors. A known error is a problem where initial analysis is complete; it usually means that faulty components have been identified.

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Problem Management Phases: Problem Identification

Problem Identification:

- Performing trend analysis of incident records
- Detection of duplicate and recurring issues by users, service desk, and technical support staff
- Major incident management identifying a risk that an incident could recur
- Analyzing information received from suppliers and partners
- Analyzing information received from internal software developers, test teams, and project teams

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Problem Management Phases: Problem Control

Problem Control:

- Problems are prioritized for analysis based on the risk that they pose and are managed as risks based on their potential impact and probability
- Incidents typically have many interrelated causes, and the relationships between them can be complex. Problem control should consider all contributory causes
- When a problem cannot be resolved quickly, it is often useful to find and to document a workaround for future incidents, based on an understanding of the problem
- It is important to analyze problems from the perspective of all four dimensions of service management
- Workarounds are documented in problem records

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Problem Management Phases: Error Control

Error Control:

- Error control includes the identification of potential permanent solutions. This may result in a change request for implementation of a solution if justified in terms of cost, risks, and benefits
- Error control regularly re-assesses the status of known errors that have not been resolved, including impact on customers and availability, permanent solutions, etc.
- The effectiveness of workarounds should also be evaluated each time a workaround is used. Workarounds may be improved based on the assessment.

Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Service Request Management

Service Request Management

- Service requests are a normal part of service delivery and are not a failure or degradation of service, which are handled as incidents
- Service requests are pre-defined and pre-agreed as a normal part of service delivery; they can be formalized, with a clear, standard procedure for initiation, approval, fulfillment, and management
- Some service requests have very simple workflows, such as a request for information

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Service Request Management

- Some, such as the setup of a new employee, may be quite complex and require contributions from many teams and systems for fulfillment
- Regardless of the complexity, the steps to fulfill the request should be well-known and proven
- This allows the service provider to agree on times for fulfillment and to provide clear communication of the status of the request to users

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Service Request Management Guidelines

To be handled successfully, service request management should follow these guidelines:

- Service requests and their fulfillment should be standardized and automated to the greatest degree possible
- Policies should be established regarding what service requests will be fulfilled with limited or even no additional approvals so that fulfillment can be streamlined
- The expectations of users regarding fulfillment times should be clearly set, based on what the organization can realistically deliver

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Service Request Management Guidelines

- Opportunities for improvement should be identified and implemented to produce faster fulfillment times and take additional advantage of automation
- Policies and workflows should be included for the documenting and redirecting of any requests that are submitted as service requests, but which should actually be managed as incidents or changes

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

aci
LEARNING

Service Desk

The purpose of the **service desk** practice is to capture demand for incident resolution and service requests.

It should also be the point of communication for the service provider with all its users.

In other words, it should act as the entry point/single point of contact for the IT or service organization.

aci
LEARNING

Service Desk

Service desks provide a clear path for users to report issues, queries, and requests and have them acknowledged, classified, owned, and actioned.

- How a service desk is delivered may vary, from a physical team of people on shift work to a distributed mix of people connected virtually or automated technology and bots. The function and value remain the same, regardless of the model.
- The focus of the service desk is to provide support for 'people and business' rather than simply technical issues.
- There will always be issues that need escalation and underpinning support from other teams. Support and development teams need to work in close collaboration.
- The key aspect of a good service desk is its practical understanding of the wider organization, the business processes, and the users.

aci
LEARNING

Service Desk Channels and Examples

Service Desk Channel	Example
Phone calls	IVR, conference calls, voice recognition, and call centers
Service portals and mobile applications	Service and request catalogs and knowledge bases
Chat	Live chat and chatbots
Email	Logging and updating, follow up surveys, and confirmations
Walk-in service desks	High peaks of activity that demand physical presence
Text and social media messaging	Useful in major incidents and for contacting specific stakeholder groups, Users can request support.
Public and corporate social media	Contacting the service provider and for peer-to-peer support

Service Desk Training and Competencies

- Service desk personnel need to diagnose incidents {and fulfill service requests} in terms of business priority and to take appropriate action to get them resolved using available skills, knowledge, people, and processes.
- Must also possess broad technical and business area skills:
 - Excellent customer service skills
 - Empathy
 - Effective communication skills
 - Emotional intelligence
 - Incident analysis skills to diagnose and prioritize incidents to resolve them
 - Understanding of business priority

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Level Management

The purpose of the **service level management** practice is to set clear business-based targets for service performance so that the delivery of a service can be properly assessed, monitored, and managed against these targets.

This practice involves the definition, documentation, and active management of service levels as services may involve a 'bundle' of varied and disparate activities, like or related activities that need to be combined and aggregated together, to reflect a realistic view. *Requires an understanding of the Business, Commercial Skills, Negotiating and good Communication*

LEARNING

Service Level Management

Service level management provides the end-to-end visibility of the organization's services. To achieve this, service level management:

- Establishes a shared view of the services and target service levels with customers.
- Ensures the organization meets the defined service levels through the collection, analysis, storage, and reporting of the relevant metrics for the identified services.
- Performs service reviews to ensure the current set of services continues to meet the needs of the organization and its customers.
- Captures and reports on service issues, including performance against defined service levels.

Service Level Agreements

Service level agreements (SLAs) have long been used as a tool to measure the performance of services from the customer's point of view. It is important that they are agreed upon in a wider business context.

Some of the key requirements for successful SLAs include:

- They must be related to a defined 'service' in the service catalog. Otherwise, they are simply individual metrics without a purpose that do not provide adequate visibility or reflect the service perspective
- They should relate to defined outcomes and not simply operational metrics. This can be achieved with balanced 'bundles' of metrics, such as customer satisfaction and key business outcomes

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Service Level Agreements Continued

Some additional key requirements for successful SLAs include:

- They should reflect an 'agreement,' that is, engagement and discussion between the service provider and the service consumer. It is important to involve all stakeholders, including partners, sponsors, users, and customers
- They must be simply written and easy to understand and use for all parties

LEARNING

Service Level Management: Customer Engagement and Feedback

- Engagement is needed to understand and confirm the actual ongoing needs and requirements from customers.
- Listening is important as a relationship building and trust-building activity.
- Customer Engagement Questions:
 - What does your work involve?
 - How does technology help you?
 - What are your key business times, areas, people, and activities?
 - What differentiates a good day from a bad day for you?
 - Which of these activities is most important to you?
 - What are your goals, objectives, and measurements for this year?
 - What is the best measure of your success?
 - How do you base your opinion and evaluation of a service or IT/technology?
 - How can we help you more?

- Customer Feedback Methods:

Surveys

Business
metrics

Other
methods

Service Level Management

Service level management requires focus and effort to engage and listen to the requirements, issues, concerns, and daily needs of customers:

- Engagement is needed to understand and confirm the actual ongoing needs and requirements from customers, not simply what is interpreted by the service provider or has been agreed upon several years before.
- Listening is important as a relationship-building and trust-building activity, to show customers that they are valued and understood.

Sample Question

What is a standard change?

- A. A change that doesn't need risk assessment because the procedure has been pre-authorized
- B. A change that needs to be assessed, authorized, and scheduled by a change authority
- C. A change that doesn't need risk assessment because it is required to resolve an incident
- D. A change that is assessed, authorized, and scheduled as part of "continual improvement."

Copyright © ACI Learning. All Rights Reserved.

Sample Question

Which of these should be logged and managed as a problem?

- A. A user requests delivery of a laptop
- B. A monitoring tool detects a change of state for a service
- C. Trend analysis shows a large number of similar incidents
- D. 'Continual improvement' needs to prioritize an improvement opportunity

Copyright © ACI Learning. All Rights Reserved.

Sample Question

Which is a recommendation of the "continual improvement" practice?

- A. There should be a small team dedicated to leading continual improvement efforts
- B. All improvements should be managed as multi-phase projects
- C. Continual improvement should be isolated from other practices
- D. External suppliers should be excluded from improvement initiatives

Sample Question

How does information about problems and known errors contribute to Incident Management?

- A. It enables quick and efficient diagnosis of incidents
- B. It removes the need for regular customer updates
- C. It removes the need for collaboration during incident resolution
- D. It enables the reassessment of known errors.

Sample Question

Which describes normal changes?

- A. Changes that are low-risk and pre-authorized
- B. Changes that need to be scheduled and assessed following a process
- C. Changes that are typically initiated as service requests
- D. Changes that must be implemented as soon as possible

Sample Question

Which statement about outcomes is CORRECT?

- A. Outcomes are one or more services that fulfil the needs of a service consumer
- B. Service providers help service consumers achieve outcomes
- C. Outcomes help service consumers achieve outputs
- D. Helping service consumers achieve outcomes reduces service provider costs

Sample Question

Which skill is an essential part of the 'service level management' practice?

- A. Technical knowledge
- B. Listening
- C. Diagnosis
- D. Problem analysis

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Sample Question

Which TWO statements about the 'service request management' practice are CORRECT?

- 1. Service requests are part of normal service delivery
 - 2. Complaints can be handled as service requests
 - 3. Service requests result from a failure in service
 - 4. Normal changes should be handled as service requests
- A. 1 and 2
 - B. 2 and 3
 - C. 3 and 4
 - D. 1 and 4

Key Practices in Detail: Learning Summary

Based on this lesson, we can:

Explain the following ITIL® practices in detail*:

- Continual improvement including the continual improvement model (4.6, fig 4.3)
- Change enablement (5.2.4)
- Incident management (5.2.5)
- Problem management (5.2.8)
- Service request management (5.2.16)
- Service desk (5.2.14)
- Service level management (5.2.15)

*comprises 17 of the 40 exam questions

Descriptions of the Four Dimensions of Service Management

Four Dimensions of Service Management: The four perspectives that are critical to the effective and efficient facilitation of value for customers and other stakeholders in the form of products and services.

Dimension	Description (taken from ITIL® 4 Glossary)
Organizations and People	Ensures that the way an organization is structured and managed, as well as its roles, responsibilities, and systems of authority and communication, is well defined and supports its overall strategy and operating model.
Information Technology	Includes the information and knowledge used to deliver services and the information and technologies used to manage all aspects of the service value system.
Partners and Suppliers	Encompasses the relationships an organization has with other organizations that are involved in the design, development, deployment, delivery, support, and/or continual improvement of services.
Value Streams and Processes	Defines the activities, workflows, controls, and procedures needed to achieve the agreed objectives.

Four Dimensions Should Influence Service Solutions

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

Co-Creation of Value

Value: Value is the perceived benefits, usefulness, and importance of something.

Value is co-created by a service provider and a service consumer in a service relationship, during a service interaction.

Cost + Speed + Quality =
"Perceived" Value

Supported Outcomes ^ + Costs & Risks v =
"Balanced" Value

Components of the ITIL® Service Value System

SVS: A model representing how all the components and activities of an organization work together to facilitate value creation.

Component	Description (taken from ITIL® 4 Glossary)
ITIL® Guiding Principles	Recommendations that can guide an organization in all circumstances, regardless of changes in its goals, strategies, types of work, or management structure
Governance	The means by which an organization is directed and controlled
ITIL® Service Value Chain	An operating model for service providers that covers all the key activities required to effectively manage products and services
ITIL® Practices	A set of organizational resources designed for performing work or accomplishing an objective
Continual Improvement	The practice of aligning an organization's practices and services with changing business needs through the ongoing identification and improvement of all elements involved in the effective management of products and services

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Seven ITIL® Guiding Principles

Guiding principles: Recommendations that can guide an organization in all circumstances, regardless of changes in its goals, strategies, type of work, or management structure. They are universal and enduring.

1. Focus on Value
2. Start Where You Are
3. Progress Iteratively with Feedback
4. Collaborate and Promote Visibility
5. Think and Work Holistically
6. Keep It Simple and Practical
7. Optimize and Automate

Copyright © ACI Learning. All Rights Reserved.
Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

The Seven Guiding Principles

Guiding Principle	Description & Key Message
Focus on Value	Everything that the organization does needs to map, directly or indirectly, to value for the stakeholders. The focus encompasses the experience of customers & users.
Start Where You Are	Do not start from scratch and build something new without considering what is already available to be leveraged. The current state should be investigated and observed directly to be understood.
Progress Iteratively with Feedback	Do not attempt to do everything at once. Smaller sections can be executed in a timely manner with sharper focus. Use feedback before, during, and after to ensure focus.
Collaborate and Promote Visibility	Working together across boundaries produces results that have greater buy-in, more relevance to objectives, and a better likelihood of long-term success. Share information to the greatest degree possible.
Think and Work Holistically	No service, or element used to provide a service, stands alone. All of the organization's activities should be focused on the delivery of value.
Keep It Simple and Practical	Always use the minimum number of steps to accomplish an objective. If a process, service, action, or metric provides no value or produces no useful outcome, eliminate it.
Optimize and Automate	Human intervention should only happen where it really contributes value. Eliminate truly wasteful and automate whatever possible.

Governing Bodies

Governance: The means by which an organization is directed and controlled

All organizations are directed by a governing body:

- A person or group
- Accountable at the highest level
- Organizational performance
- Compliance of the organization

All sizes and types of organizations perform governance activities:

- Board of directors
- Executive managers when performing governance activities
- Compliance with policies and external regulations

Stakeholders

Stakeholder	Example Stakeholder Value
Service consumers	Sponsors, Customers, & Users; Benefits achieved, costs and risks optimized
Service provider	Internal & External {suppliers}; Funding from the consumer; business development; image improvement
Service provider employees	Financial and non-financial incentives, career and professional development, a sense of purpose
Governing bodies	Country, State, County, City, Village, Town, Association, etc.
Society and community	Employment, taxes, organizations' contribution to the social and community development
Charity organizations	Financial and non-financial contributions from other organizations
Shareholders	Financial benefits, such as dividends; a sense of assurance and stability

Service Consumer Types

Sponsor: A role that authorizes the budget for service consumption. Can also be used to describe an organization or individual that provides financial or other support for an initiative.

Customer: A role that defines the requirements for a service and takes responsibility for the outcomes of service consumption.

User: A role that uses services.

aci
LEARNING

Service Relationships

Service Relationship: A cooperation between a service provider and service consumer.

Service relationships include:

- Service provision
- Service consumption
- Service relationship management

Organizations engage as service providers and service consumers to produce service relationships that co-create value.

The roles of service provider and service consumer are not mutually exclusive.

aci
LEARNING

Service Offering & Components

Service Offering: A formal description of one or more services, designed to address the needs of a target consumer group.

Service Offering Components	Description	Examples
Goods	- Supplied to the consumer. - Ownership is transferred to the consumer. - Consumer takes responsibility for future use.	- A mobile phone - A physical server
Access to resources	- Ownership is not transferred to the consumer. - Access is granted or licensed to the consumer under agreed terms and conditions. - The consumer can only access the resources during the agreed consumption period and according to other agreed service terms.	- Access to a mobile network - Access to network storage
Service actions	- Performed by the service provider to address a consumer's needs. - Performed according to an agreement with the consumer.	- Sales - Installation - Training - User support - Repairs - Replacement product/service - Retirement of service or service consumer

Service Value Chain Activities

Activity	Description
Plan	Relevant planning activities at all levels: strategic, architectural, program/project, and so on
Improve	Execution of improvement activities and provision of improvement information
Engage	Interactions with third parties, including users, customers, suppliers, and other stakeholders
Design and Transition	Creation of new or changed solution designs; management and implementation of change
Obtain/Build	Acquisition or building of components, whether acquired from a third party or built in-house
Deliver and Support	Hosting and delivery of solutions; support for user needs related to the services

ITIL®4 Foundation Practices	ITIL Practice: A set of organizational resources designed for performing work or accomplishing an objective.
Name	Purpose
Continual Improvement	Align the organization's practices and services with changing business needs through the ongoing identification and improvement of services, service components, practices, or any element involved in the efficient and effective management of products and services.
Service Level Management	Set clear business-based targets for service performance so that the delivery of a service can be properly assessed, monitored, and managed against these targets. Major activities are Customer Engagement and Customer feedback.
Change Enablement	Maximize the number of successful IT changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing the change schedule.
Incident Management	Minimize the negative impact of incidents by restoring normal service operations as quickly as possible.
Service Request Management	Support the agreed-upon quality of a service by handling all predefined, user-initiated service requests in an effective and user-friendly manner.
Service Desk	Capture demand for incident resolution and service requests. It should also be the entry point and single point of contact for the service provider with all its users. Service desk models/types include local, central, & virtual.
Problem Management	Reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents and managing workarounds and known errors. Phases are Problem Identification, Problem control, & Error Control.
Relationship Management	Establish and nurture the links between the organization and its stakeholders at strategic and tactical levels, including the identification, analysis, monitoring, and continual improvement of relationships with and between stakeholders.
Information Security Management	Protect the information needed by the organization to conduct its business. This includes understanding and managing risks to the confidentiality, integrity, and availability of information, as well as other aspects of information security.
Supplier Management	Ensure that the organization's suppliers and their performances are managed appropriately to support the seamless provision of quality products and services.
Service Configuration Management	Ensure that accurate and reliable information about the configuration of services and the CIs that support them is available when and where it is needed.
IT Asset Management	Plan and manage the full lifecycle of all IT assets to help the organization maximize value; control cost; manage risk; support decision-making about a purchase, reuse, and retirement of assets; meet regulatory and contractual requirements.
Monitoring & Event Management	Systematically observe services and service components, and record and report selected changes of state identified as events.
Deployment Management	Move new or changed hardware, software, documentation, processes, services, or any other component to live environments; to be ready for release.
Release Management	Make new and changed components/services and features available for use.

Key Definitions:

4 Dimensions	The four perspectives that are critical to the effective and efficient facilitation of value for customers and other stakeholders in the form of products and services.
Service Value System	A model representing how all the components and activities of an organization work together to facilitate value creation.
Service Value Chain	An operating model for service providers that covers all the key activities required to effectively manage products and services.
Guiding Principles	Recommendations that can guide an organization in all circumstances, regardless of changes in its goals, strategies, types of work, or management structure.
Service	A means of enabling value co-creation by facilitating outcomes that customers want to achieve, without the customer having to manage specific costs and risks
Product	A configuration of an organization's resources designed to offer value for a consumer.
Practice	A set of organizational resources designed for performing work or accomplishing an objective.
Value	Perceived benefits, usefulness, and importance of something. Balance of Outcomes + Risk + Costs. Utility & Warranty.
Cost	Amount of money spent on a specific activity or resource
Risk	Possible events that could cause harm or loss, or make it more difficult to achieve objectives
Outcome	A result for a stakeholder enabled by one or more outputs
Output	A tangible or intangible deliverable of an activity
Utility	Functionality; what the service does; fit for purpose; support performance or remove constraints
Warranty	Assurance that a product or service will meet agreed requirements; How the service performs; fit for use;
Sponsor	Authorizes the budget for service consumption
Customer	A person who defines the requirements for a service and takes responsibility for the outcomes of service consumption

Key Definitions:

User	A person who uses services
Service management	Set of specialized organizational capabilities for enabling value to customers in the form of services
Service offering	A description of one or more services designed to address the needs of a target consumer group. May include goods, access to resources, and service actions
Service provision	Activities performed by an organization to provide services. Includes management of resources, service performance management, and continual improvement
Service consumption	Activities performed by an organization to consume services. Includes management of the consumer's resources needed to use the service
Service relationship	A cooperation between a service provider and service consumer
Service relationship management	Joint activities performed by a service provider and service consumer to ensure continual value co-creation based on agreed and available service offerings
Organization	A person or a group of people that has its own functions with responsibilities, authorities, and relationships to achieve its objectives
Service Request	A request from a user or user's authorized representative that initiates a service action that has been agreed as a normal part of service delivery
Service Level Agreement	A documented agreement between a service provider and a customer that identifies both services required and the expected level of service
IT Asset	Any financially valuable component that can contribute to the delivery of an IT product or service
Event	Any change of state that has significance for the management of a configuration item (CI) or IT service
Configuration item	Any component that needs to be managed in order to deliver an IT service

Copyright © ACI Learning. All Rights Reserved.

**Key Definitions:**

Continual improvement register	Used to track and manage improvement ideas from identification through final action. Multiple CIRs can be maintained on an individual, team, departmental, business unit, and organizational levels
Change	The addition, modification, or removal of anything that could have a direct or indirect effect on services. Types are Standard, Normal, and Emergency.
Incident	An unplanned interruption to a service or reduction in the quality of a service
Problem	A cause, or potential cause, of one or more incidents
Known Error	A problem that has been analyzed and has not been resolved
Work Around	A solution that reduces or eliminates the impact of an incident or problem for which a full resolution is not yet available. Some workarounds reduce the likelihood of incidents.

ITIL®4 Foundation Challenge Questions Study & Review Introduction and Key Concepts — Question #01

What is the definition of Utility?

- A. A tangible or intangible deliverable that is produced by carrying out an Activity
- B. The assurance that a product or service will meet agreed requirements
- C. A possible event that could cause harm or less, or make it more difficult to achieve objectives
- ➔ D. The functionality offered by a product or service to meet a particular need

MB1-Q04

- A. This is the definition of an Output
- B. This is the definition of Warranty, which makes something Fit for Use
- C. This is the definition of Risk
- D. This is one of the two components of Utility, the other being Constraints Reduced; that together makes something Fit for Purpose. Utility plus Warranty creates Value

ITIL®4 Foundation Challenge Questions Study & Review Introduction and Key Concepts — Question #02

What is defined as "perceived benefits, usefulness and importance of something"?

- A. Outputs
- ➔ B. Value
- C. Warranty
- D. Outcomes

MB1-Q05A

- A. Outputs are a result that all by itself, does not create value
- B. The keyword in the question is "perceived," as perception may be different than the actual result; during the co-creation of value
- C. Warranty is one of two major elements that compose value
- D. Outcomes are a result of co-creation with outputs that a service consumer takes responsibility for that, in turn, creates value

Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

ITIL®4 Foundation Challenge Questions Study & Review Introduction and Key Concepts — Question #03

Identify the missing word(s) in the following sentence: An organization is a person or a group of people that has its own functions with _____ to achieve its objectives.

- A. Outputs and outcomes
- B. Utility
-  C. Responsibilities, Authorities, and Relationships
- D. Products and services

MB1-Q06

- A. & B. Outputs, outcomes, and Utility are related to the production of a service, not an organizational element
- C. Organizations and groups, or functions; are a collection of people
- D. Products and services are a result of A & B

ITIL®4 Foundation Challenge Questions Study & Review Introduction and Key Concepts — Question #11

Which of the following could be parts of service offering?

1. Goods
2. Policies
3. Access to resources
4. Service actions

- A. 1, 2, 3
B. 1, 2, 4
 C. 1, 3, 4
D. 2, 3, 4

MB2-Q06

A., B., & D. False: #2 Policies must be considered in creating a product or service but are not part of service offerings

C. True: Goods, Access, and Service Actions are the main parts of any service offering

ITIL®4 Foundation Challenge Questions Study & Review: The ITIL Guiding Principles — Question #28

Which is NOT one of the "optimization" steps in "optimize and automate"?

- ➔ A. Customer preparation
- B. Desired future state
- C. Stakeholder engagement
- D. Monitoring feedback

MB2-Q13

- A. False: Customers aren't preparing for automation; IT is preparing it for them, then they will prepare to use it
- B. True: Future state information tells us the goal that needs to be realized for doing the automation
- C. True: We need stakeholders asking for and impacted by the automation to be part of the effort
- D. True: We should have methods in place to ensure the automation was beneficial, know where it needs improvement, and know what did not work as desired

ITIL®4 Foundation Challenge Questions Study & Review The ITIL® Service Value System — Question #36

Which value chain activity provides stakeholder feedback for improvements?

- A. Design and transition
- B. Deliver and support
- C. Obtain/build
- ➔ D. Engage

MB1-Q39

- A. Design & Transition does not usually gather feedback from stakeholders
- B. During Deliver & Support, we use Engage to receive feedback from stakeholders
- C. Obtain & Build is working at the component level and does not usually gather feedback from stakeholders
- D. Engage interacts with stakeholders to gather requirements, demand, and feedback

ITIL®4 Foundation Challenge Questions Study & Review

The ITIL® Service Value System — Question #38

Which are the key activities of governance?

1. Plan
2. Evaluate
3. Direct
4. Monitor

- A. 1, 3, 4
 B. 1, 2, 4
 C. 1, 2, 3
 → D. 2, 3, 4

MB2-Q02

A., B., & C. Are False: #1 Plan is not a Governance activity, but rather a Service Value Chain activity

D. True: We "Evaluate" governance requirements, "Direct" through policies, and "Monitor" compliance and conformance to the policies; to ensure we meet the governance requirements

ITIL®4 Foundation Challenge Questions Study & Review

The ITIL® Service Value System — Question #39

Which of the following is true of a value chain?

- A. Defines a single sequence of activities and aren't combined in different ways
 B. Doesn't consider needed skills and competencies
 C. Supports a single ITIL® practice
 → D. Converts inputs into outputs

MB2-Q14

A. Value chains consider any number of activities in various combinations

B. We need to consider competencies & skills, to ensure that the chain creates the intended value

C. Value Chains supports any number of Practices; limiting to a single practice would limit value creation

D. By combining Service Value Chain activities; we create Value Chains, value streams, practices, and/or processes that convert inputs to outputs

ITIL®4 Foundation Challenge Questions Study & Review Key ITIL® Practices — Question #40

How does prioritization of Incidents assist incident management?

- A. It determines the resource assigned to the incident
- B. It helps direct the incident to the correct support area
- ➔ C. It helps determine which incidents should be resolved first
- D. It determines how the service provider is perceived

MB1-Q01

- A. Prioritization is a factor in resolving incidents as quickly as possible; the purpose of the Incident practice. Categorization is determining the technical domain &/or service name, allowing us to assign the right resource to the incident
- B. Categorization is the other part of the classification, tells us the technical domain &/or service name, which will help make the decision on the priority level. Along with prioritization, they both help with direct the incident to the correct support area
- C. **Priority is part of the classification of an incident or problem. Higher priority means more impact & urgency to the business; in turn, potentially specific types &/or more resources may need to be assigned**
- D. Resolution rates of incidents will drive perception more than just the priority

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #41

Which is a purpose of the "problem management" practice?

- ➔ A. To reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents
- B. To maximize the number of successful IT changes by ensuring risks are properly assessed
- C. To set clear business-based targets for service performance
- D. To capture the demand for incident resolution and service request

MB1-Q08

- A. The objective of proactive and reactive problem management is to reduce the likelihood of incidents and problems
- B. This is the purpose of the Change Enablement practice
- C. This is the purpose of the Service Level Management practice
- D. This is the purpose of the Service Desk practice

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #42

How does "service level management" contribute to "obtain/build" value chain activity?

- A. It analyzes data to identify opportunities that provide new service request options
- B. It ensures users continue to be productive when they need assistance from the service provider
- C. It acquires pre-approved service components to help fulfill the service request
- ➔ D. It collects user-specific requirements, sets expectations, and provides status updates

MB1-Q09

- A. This is the purpose of the Service Request practice
- B. This is what the Deliver & Support SVC activity does using workarounds
- C. This is the purpose of the Obtain/Build SVC activity, not how SLM interfaces with it
- D. SLM gathers requirements & specifications for products & services; then passes them on to the Plan, Design & Transition, and Obtain/Build SVC activities

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #43

What should be included in every service level agreement?

- A. Details of the process-based metrics used
- B. Technical description of the service components and how they are operated
- ➔ C. Expectations of both parties
- D. Legal language

MB1-Q12

- A. SLA'S should use business-based metrics to gauge service performance
- B. & D. SLAs are intended to be customer-friendly, non-technical, non-legal agreements with business and service targets
- C. Every SLA should document both the service provider's and the service consumer's expectations

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #44

What is a normal change?

- A. A change that is assessed, authorized, and scheduled as part of "continual improvement"
- B. A change that doesn't need a risk assessment because it is required to resolve an incident
- C. A change that doesn't need a risk assessment because the procedure has been pre-authorized
- ➔ D. A change that needs to be assessed, authorized, and scheduled by a change authority

MB1-Q13

- A. Not every improvement needs to be handled as a normal change.
- B. & C. All changes, including changes for incident resolution or standard changes should go through some form of risk assessment to minimize change related incidents
- D. A Normal change type is for a change of any kind that we have no prior experience with &/or for changes that are of major scale & scope &/or changes with high risks that need more change management in place

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL Practices — Question #45

What is the purpose of "continual improvement"?

- ➔ A. To align the organization's practices and services with changing business needs through the ongoing identification and improvement of services
- B. To ensure that accurate and reliable information about the configuration of supplier's services are available when and where it's needed
- C. To ensure that the organization's suppliers and their performance are managed appropriately at strategic and tactical levels through coordinated marketing, selling, and delivery activities
- D. To ensure that the organization's suppliers and their performance are managed appropriately to support the provision of seamless, quality products and services

MB1-Q16

A. Continual alignment with the business via continual improvement over time increase value

B. This is the purpose of the Service Configuration practice

C. & D. This is the purpose of the Supplier Management practice

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #46

Which statement about an emergency change is CORRECT?

- A. Emergency changes should be pre-approved and defined with change models
- B. Emergency changes can be implemented without authorization from a change authority
- ➔ C. Emergency changes require expedited handling and may reduce testing
- D. Emergency changes will be reviewed at the next scheduled change authority meeting

MB1-Q18

A. Pre-approval is true of standard changes that use change models

B. Every change should have a pre-determined and appropriate change authority

C. An emergency change is to resolve a major incident or prevent one. They eventually need to be fully documented and tested

D. The next change authority meeting could be a week away; too late to handle the emergency.

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #47

Which is NOT a recommendation of the "continual improvement" practice?

- A. External suppliers should be included in improvement initiatives
- ➔ B. All improvements should be managed as multi-phase projects
- C. Continual improvements should be integrated with other practices
- D. There should be a small team dedicated to leading continual improvements efforts

MB1-Q20

- A. True: Though not every product or service a provider offers involves a supplier, when they do, then the supplier should be included, and that should be part of the contract.
- B. False: All improvements aren't the scale, scope &/or level of risk requiring any type of project. Some may be satisfied through a standard change model.
- C. True: CI is everyone's and every practice's shared objective
- D. True: At a minimum, a small team should exist, or there will be no focus on improvement initiatives, and also may send a message that improvement is not part of the culture.

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #48

Which is NOT a recommendation of the "service desk" practice?

- ➔ A. Service desk should always be a physical team in a single fixed location
- B. Service desk can use technologies such as SMS and chat functions
- C. Service desk can be highly technical functions depending on the organization's need
- D. Service desk should have a practical understanding of the wider business

MB1-Q23

- A. False: There are many types or structures of service desks, and an organization can have as many as needed, so this is not true
- B. True: The service desk can use all kinds of service automation
- C. True: Service desk can be highly technical, but they all still require non-technical skill sets
- D. True: This is one of several non-technical knowledge areas for a service desk function

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #49

Which practice has the purpose of maximizing the number of successful changes?

- A. Release management
- ➔ B. Change enablement
- C. Service request management
- D. Deployment management

MB1-Q27

- A. Release makes new or changed services available for use.
- B. Change Enablement maximizes the number of successful changes in many ways; including proper assessment, evaluation, and prioritization of changes; as well as through the use of change models and standard changes; especially by automating standard changes
- C. Service request only covers standard changes for users; not all changes
- D. Deployment places new or changed services into live environments

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #50

Which is the purpose of the "service desk" practice?

- ➔ A. To capture demand for incident resolution and service request
- B. To reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents
- C. To maximize the number of successful IT changes by ensuring risks are properly assessed
- D. To set clear business-based targets for service performance

MB1-Q35

- A. The service desk as the Single Point of Contact should capture all demand and requests from users
- B. This is the purpose of the Problem practice
- C. This is the purpose of the Change Enablement practice
- D. This is the purpose of the Service Level practice

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #51

Which is NOT one of the steps of the "continual improvement" model?

- ➔ A. What improvement method will we use?
 B. Take action?
 C. How do we keep the momentum going?
 D. Where are we now?

MB2-Q03

A. False: Deciding on what improvement methods to use would be part of overall continual improvement management, not a step in the model

B., C., & D. True: The CI Model's seven steps are:

- 1.What is the Vision?
- 2.Where are we now?
- 3.Where do we want to be?
- 4.How do we get there?
- 5.Take action?
- 6.Did we get there?
- 7.How do we keep the momentum going?

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #52

In which step of the "continual improvement" model do we define a high-level organizational objective of the improvement?

- ➔ A. Where are we now?
 B. What is the vision?
 C. How do we get there?
 D. How do we keep the momentum going?

MB2-Q15

- A. This is an analysis of our current state, not about the business objective
 B. This is where we work with the business to understand their strategy, tactics, and objectives
 C. This is about creating an improvement plan
 D. This is after we achieved the improvement

ITIL®4 Foundation Challenge Questions Study & Review Key ITIL® Practices — Question #53

Which of the steps of the "continual improvement" model has the strongest relationship to the guiding principle "start where you are"?

- A. What is the vision?
- B. Take action?
-  C. Where are we now?
- D. How do we get there?

MB2-Q16

- A. This is where we work with the business to understand their strategy, tactics, and objectives
- B. This is where we implement the improvement plan
- C. This is an analysis of our current state
- D. This is about creating an improvement plan

Copyright © ACI Learning. All Rights Reserved.

ITIL®4 Foundation Challenge Questions Study & Review Key ITIL® Practices — Question #54

Which of the following are subject to continual improvement?

- 1. Products
- 2. Practices
- 3. Service components
- 4. The entire Service value system

- A. 1, 2, 4 only
- B. 2, 3, 4 only
- C. 1, 2, 3 only
-  D. 1, 2, 3, and 4

MB2-Q02

A., B., & C. Are False: Because they do not include all four items in the list. There is no area of IT that cannot be considered as an opportunity for improvement; nor is there one specific place to start that investigation

D. True: All areas of IT Service Management are candidates for improvement, those listed as well as, for example, assets, automation, measurements, practices, processes, policies, products, partners, & suppliers.

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #55

Fill in the missing word(s): The Continual Improvement Register (CIR) is a structured database or document used to track and manage _____?

- ➔ A. Improvement opportunities
- B. Changes
- C. Incidents
- D. Service request

MB2-Q18

- A. The CIR is used by continual improvement teams within the CI practice
- B. Changes are typically tracked by a change authority using meeting minutes and a change schedule
- C. Incidents &/or trend analysis of incident types will guide us on where we need to improve IT; often tracked in an IT service management system database
- D. Unfulfilled Service Requests &/or request trend analysis will guide us on where we need to improve IT; also tracked in an IT service management system database

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #56

Fill in the missing word(s): The Service Level Management practice's purpose is to set clear _____ targets for service performance so that the delivery of a service can be properly assessed, monitored, and managed.

- A. Technology-based
- B. System-based
- C. Service-based
- ➔ D. Business-based

MB2-Q19

- A. & B. Application, component, system, or technology targets measure the performance of hardware & software resources that contribute to service targets
- C. Service targets tell us how a service is performing, more output than outcome centric
- D. Business based targets tell us if IT services are creating value for the business, customers, & other stakeholders

ITIL®4 Foundation Challenge Questions Study & Review Key ITIL® Practices — Question #57

Which of the following reflects ITIL® guidance about SLA Requirements?

- A. Sets stretch targets to motivate service providers
- ➔ B. Related to key customer outcomes and customer satisfaction
- C. Written in technical detail
- D. Specifies system performance reporting

MB2-Q20

- A. Service Level Agreement requirements and targets are about how IT needs to serve the business, not to motivate the service provider
- B. Service Level Agreements are between a service provider and a service consumer, in most cases, the customer; who decides on the requirements they have in order to achieve the outcomes they require in the co-creation of value
- C. Typically, SLAs and SLRs are non-legal and non-technical documents in a customer-friendly tone
- D. SLAs and SLRs are about services, not the components of the service

ITIL®4 Foundation Challenge Questions Study & Review Key ITIL® Practices — Question #58

Which of the following is true for a "change authority"?

- A. A single change authority should be identified for all changes
- B. Should allow changes only when there is no risk
- ➔ C. Different change authorities may be identified for different types of changes
- D. Changes in high-velocity organizations should be reviewed by a change advisory board

MB2-Q21

- A. & D. A single change authority would be overburdened with changes needed by the business and the knowledge required to assess and control changes
- B. By definition of a risk, there is always a risk when you change anything
- C. Several change authorities, as well as change models, address both the volume of work and depth and breadth of knowledge required to control changes

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #59

"The addition, modification or removal of anything that could have a direct or indirect effect on services" is the ITIL® definition of a:

- A. Package
- B. Deployment
- C. Release
- D. Change

MB2-Q22

- A. Package or bundle is usually used in talking about grouping services
- B. Deployment is about moving the change into a live environment
- C. Release is about making the change available for use
- D. This all-inclusive definition helps ensure that we have control over all changes

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #60

Which of the following are types of change described in the ITIL® guidance?

- 1. Standard
- 2. Urgent
- 3. Emergency
- 4. Normal

- A. 1, 3, 4 only
- B. 1, 2, 3 only
- C. 1, 2, 4 only
- D. 2, 3, 4 only

MB2-Q23

- A. True: #1, #3, & #4 Standard changes use change models and are pre-approved; Emergency changes are to resolve a major incident or prevent one; Normal changes are new changes we never did before or changes we have implemented before but require more controls because of scale, scope, criticality, and/or risk.
- B., C., & D are False: Because #2, Urgency is part of determining priority, not a type of change

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #61

Which of the following practices would be **MOST LIKELY** to use information from the change schedule?

- A. IT asset management
- B. Relationship management
- C. Monitoring and event management
- ➔ D. Incident management

MB2-Q24

- A. ITAM practice focuses on keeping track of assets with asset records
- B. The change schedule is more for internal IT use, but may be used in Relationship or Service Level Management practices; to keep in alignment with the business
- C. M&E practice is to handle significant changes in the status of assets or services
- D. In responding to incidents, it will be useful for this practice to know what changes are in progress or have been recently completed

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #62

Which feature would **NOT** be part of a suitable "incident management" tool?

- A. Links to problems, known errors, and knowledge information.
- ➔ B. Detailed procedures for resolving complex incidents
- C. Automated incident matching
- D. Timestamping and tracking

MB2-Q25

- A. & C. True: Linking or matching of incident records to a problem or known error records facilitates quick resolution of incidents, and automating this procedure helps further
- B. False: Detailed and complex are contrary to the purpose of the IM practice
- D. True: Incident records with time & date info facilitates meeting targets in SLAs

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #63

Which is NOT a benefit of using swarming as an "incident management" technique?

- A. Faster resolution
- B. Quicker identification of the right team(s) to work an incident
-  C. Reduced need for service desk support
- D. Maintaining focus on optimizing resources used to respond to an incident

MB2-Q26

A., B., & D. True: The primary reason to swarm is to allow quicker focus on incidents and people with the best skills to team up to resolve them

C. False: The service desk receives, tracks, communicates to users, and owns all incidents, so it needs to be part of the 'swarm.'

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #64

Which of the following has the purpose to "capture demand for incident resolution and service request"?

-  A. Service desk
- B. Technical management
- C. Service request management
- D. Relationship management

MB2-Q28

A. The Service Desk practice is the Single Point of contact for service consumers/users, and in its role of 1st level support will capture all requests of any kind for the business community.

B. Technical management is a second level infrastructure support function and would receive escalated incidents from the service desk but would not initially handle all types of requests

C. SRM practice is for the handling of non-remedial requests, so incidents would not be handled there

D. RM is customer relationship management at the strategic level and may be notified by the service desk that there is a significant customer issue that they need to assist with

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #65

Which of the following are potential access channels for a service desk practice?

1. Walk-in
2. Email
3. Chatbox
4. Text messaging

- A. 2, 3, 4
 B. 1, 2, 4
 C. 1, 2, 3
 → D. 1, 2, 3, and 4

MB2-Q29

A., B, & C. are False: Because they exclude one of the other three items in the list, so these three answers are not valid

D. All four are valid, and there are yet other channels, e.g., fax & voicemail

Copyright © ACI Learning. All Rights Reserved.

Copyright © AXELOS Limited 2019. Used under permission of AXELOS Limited. All rights reserved.

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #66

Which are some of the most critical skills a service desk analyst should possess?

1. Empathy and emotional intelligence
2. Effective communication skills
3. Detailed knowledge of infrastructure components
4. Understanding of business priority

- A. 1, 2, 3
 → B. 1, 2, 4
 C. 2, 3, 4
 D. 1, 2, 3, and 4

MB2-Q30

A., C., & D. are False: Because Service Desk personnel do not require #3, detailed knowledge of infrastructure components; level 2 and higher support functions would need to know that such as Technical & Application support.

B. True: Because 1, 2, & 4 plus other soft skill sets and business context are needed by those working in a service desk

ITIL®4 Foundation Challenge Questions Study & Review

Key ITIL® Practices — Question #67

How does the categorization of incidents assist "incident management"?

- A. It determines how the service provider is perceived
- B. It ensures that incidents are resolved as quickly as possible
- C. It determines the resource assigned to the incident
- ➔ D. It helps direct the incident to the correct support area

MB2-Q37

- A. Overall handling of incidents contributes to the customer perception of the provider; not limited to categorization
- B. Categorization helps us understand the areas related to the incident, but by itself does not ensure quick resolution
- C. Categorization determines the areas of IT related to the incident, which helps determine what resources are required to resolve it what
- D. Categorization includes identifying the technical domain &/or the service name &/or configuration item that the incident is related to; which allows a provider to assign the correct resources to the incident to resolve expeditiously

ITIL®4 Foundation Challenge Questions Study & Review Other ITIL® Practices — Question #68

Which practice provides service actions, general information, and fulfillment of standard services?

- ➔ A. Service request management
- B. Incident management
- C. Service desk
- D. Change enablement

MB1-Q14

- A. The keywords **general information, standard services, and fulfillment**; are two types of service requests that make this answer true. Service actions could be a response to a service request; or action(s) taken on an incident
- B. The incident practice handles requests for support to resolve remedial requests; whereas a service request is a non-remedial request
- C. The service desk is a function that receives all requests of all types from all service consumer roles, but it may not fulfill every request
- D. Change enablement may be required to fulfill a service request or resolve an incident

ITIL®4 Foundation Challenge Questions Study & Review Other ITIL® Practices — Question #69

"Any component that needs to be managed in order to deliver an IT service" is the ITIL® definition of:

- A. Output
- B. Service
- C. IT asset
- ➔ D. Configuration item

MB2-Q34

- A. This is the definition of a deliverable that is the result of a practice, process, or SVC activity
- B. This is the definition of a configuration of resources that meet specific requirements to automate a business process
- C. An IT Asset can be a component of a service or contribute to it, but not every asset needs management controls
- D. **Every Configuration Item is an Asset, but not every asset is a configuration item. CIs need more control because of their critically to a service**

ITIL®4 Foundation Challenge Questions Study & Review Other ITIL® Practices — Question #70

How does "service request management" contribute to "obtain and build" activity?

- A. By initiating standard changes to fulfill a service request
- B. By providing service request trends and quality information
- ➔ C. By acquiring pre-approved service components
- D. By collecting user-specific request requirements

MB1-Q28

- A. Standard changes could be for routine IT changes that are handled by Change Enablement; or for Users handled by Service Request, but Obtain & Build does not fulfill nor initiate requests
- B. Both Service Request and Obtain & Build produce reports, but not necessarily to each other in order to fulfill requests
- C. To fulfill a service request, Obtain & Build needs to acquire the components for Service Request, so SR can fulfill or complete the request
- D. Collecting requirements real-time from users may be necessary in some cases, but the requirements for service requests, especially standard services; are articulated in advance of any service request and specified in a service catalog

ITIL®4 Foundation Challenge Questions Study & Review Other ITIL® Practices — Question #72

Identify the missing word(s) in the following sentence: The purpose of the "release management" practice is to make new and changed _____ available for use.

- A. Objectives
- ➔ B. Services and features
- C. Deployments
- D. Outcomes

MB1-Q32

- A. Objectives are another way to express goals, not something we release to service consumers
- B. Services with functionality based on requirements are moved into the production or operational environments by Release for consumption by users
- C. Deployments move products and services into live environments in advance of the day that Release allows access to those products & services for use
- D. Outcomes are the result achieved by a service consumer via co-creation of value during a service relationship

ITIL®4 Foundation Challenge Questions Study & Review Other ITIL® Practices — Question #75

Which is the purpose of the "information security" practice?

- A. Establish and nurture the links between the organization and its stakeholders
- B. Ensure that the organization's suppliers and their performance are managed appropriately
- ➔ C. Protect the information needed by the organization to conduct its business
- D. Systematically observe services and service components

MB2-Q01

- A. Nurturing links with stakeholders is customer relationship management, the purpose of Relationship and Service Level management practices
- B. Nurturing links with suppliers is the Supplier management practice
- C. Information Security is concerned with the Confidentiality, Integrity, and Availability of information
- D. This is the purpose of the Monitoring & Event practice

ITIL®4 Foundation Challenge Questions Study & Review Other ITIL® Practices — Question #76

Which of the following "initiates a service action that has been agreed as a normal part of service delivery"?

- A. Incident
- B. Problem
- C. Change
- ➔ D. Service request

MB2-Q27

- A. Incidents are not normal; they are indicating something abnormal occurred
- B. A Problem is a cause of one or more incidents
- C. A Change is the addition, modification, or removal of anything that may directly or indirectly impact a service
- D. Service requests are non-remedial, usually documented as standard offerings in a service catalog; they are normal occurrences or requests

ITIL®4 Foundation Challenge Questions Study & Review Other ITIL® Practices — Question #77

"Any financially valuable component that can contribute to the delivery of an IT product or service" is the ITIL® definition of?

- A. Service
- B. Component
- ➔ C. IT asset
- D. Configuration item

MB2-Q31

- A. A service enables outcomes customers want to achieve without the ownership of specific costs and risks; made up of a configuration of Configuration Items
- B. A component is a standard elementary element, module, or part of a "system"
- C. Assets have different costs; therefore, they differ in financial value to the organization and may be part of the configuration of a service
- D. Components that need to be managed, i.e., configured, controlled, maintained, & supported to deliver a service, are Configuration Items

ITIL®4 Foundation Challenge Questions Study & Review

Other ITIL® Practices — Question #78

Which of the following must information security management establish controls to do?

1. Prevention
2. Detection
3. Correction
4. Recovery

- A. 1, 2, 4
- B. 2, 3, 4
- C. 1, 2, 3, and 4
-  D. 1, 2, 3

MB2-Q32

A., B., & C. are False because it includes #4

D. True: #4 can be part of Correction, but the formal activities are #1, #2, & #3, which are listed in the typical order of action. After #3, you go back to #1

ITIL®4 Foundation Challenge Questions Study & Review

Other ITIL® Practices — Question #79

Which of the following is the purpose of supplier management?

-  A. Ensure that the organization's suppliers and their performance are managed appropriately to support the provision of seamless, quality products and services
- B. Reduce the likelihood and impact of incidents
- C. Maximize the number of successful changes
- D. Set clear business-based targets for service performance so that the delivery of a service can be properly assessed, monitored, and managed

MB2-Q33

A. Supplier management is an internal service provider managing its relationship with external service providers; who see us as external customers.

- B. This is the purpose of Problem Management
- C. This is Change Enablement
- D. This is Service Level Management

ITIL®4 Foundation Challenge Questions Study & Review

Other ITIL® Practices — Question #80

Which of these are ITIL® Practices?

1. Release management
2. IT Asset management
3. Service Configuration management
4. Deployment management

- A. 1, 2, 3
B. 1, 2, 4
 C. 1, 2, 3, and 4
D. 2, 3, 4

MB2-Q35

A., B., & D. All four are practices in ITIL®

C. These are four of the 15 practices in ITIL® Foundation, and four of a total of 34 Practices in ITIL®_4

Word Puzzles

Version 1.3, May 2021

DOWN

1. (SERVICE) The means of enabling value co-creation, by facilitating outcomes that customers want to achieve, without the customer having to manage specific costs and risks.
3. (UTILITY) The functionality offered by a product or service to meet a particular need.
4. (USER) A person who uses services.
5. (RISK) Uncertainty of outcome.
8. (SPONSOR) A person who authorizes budget for service consumption.
9. (VALUE) '_____' is the perceived benefits, usefulness, and importance of something.

ACROSS

2. (WARRANTY) Assurance that a product or service will meet agreed requirements.
6. (OUTCOME) A result for a stakeholder enabled by one or more outputs.
7. (PROCESSES) A set of interrelated or interacting activities that transform inputs into outputs.
10. (OUTPUT) A tangible or intangible deliverable of an activity.
11. (CUSTOMER) A person who defines the requirements for a service and takes responsibility for the outcomes of service consumption.

11. RISK

Service Relationships

Version 1.2, May 2021

Fill in the blanks (answers can be used more than once):

1. **Service offering** - A description of one or more services, designed to address the needs of a target consumer group. A **Service offering** may include goods, access to resources, and service actions.
2. **Service relationship** - A co-operation between a service provider and service consumer. **Service relationships** include service provision, service consumption and service relationship management.
3. **Service relationship management** - Joint activities performed by a service provider and a service consumer to ensure continual value co-creation based on agreed and available service offerings.
4. **Service Provision** - Activities performed by an organization to provide services
5. **Service consumption** - Activities performed by an organization to consume services

ITIL Guiding Principles

Version 1.2, May 2021

Fill in the blanks:

1. **Focus on value** - Everything that the organization does needs to map, directly or indirectly, to **value** for the stakeholders. The **focus on value** principle encompasses many perspectives, including the experience of customers and users.
2. **Start where you are** - Do not start from scratch and build something new without considering what is already available to be leveraged. There is likely to be a great deal in the current services, processes, programs, projects, and people that can be used to create the desired outcome. The current state should be investigated and observed directly to make sure it is fully understood.
3. **Progress iteratively with feedback** - Do not attempt to do everything at once. Even huge initiatives must be accomplished **iteratively**. By organizing work into smaller, manageable sections that can be executed and completed in a timely manner, it is easier to maintain a sharper focus on each effort. Using **feedback** before, throughout, and after each **iteration** will ensure that actions are focused and appropriate, even if circumstances change.
4. **Collaborate and promote visibility** - Working together across boundaries produces results that have greater buy-in, more relevance to objectives, and increased likelihood of long-term success. Achieving objectives requires information, understanding, and trust. Work and consequences should be made **visible**, hidden agendas **avoided**, and information **shared** to the greatest degree possible.
5. **Think and work holistically** - No service, or element used to provide a service, stands alone. The outcomes achieved by the service provider and service consumer will suffer unless the organization works on the service as a whole, not just on its parts. Results are delivered to internal and external customers through the effective and efficient management and dynamic integration of information, technology, organization, people, practices, partners, and agreements, which should all be coordinated to provide a defined value.
6. **Keep it simple and practical** - If a process, service, action or metric fails to provide **value** or produce a useful **outcome**, eliminate it. In a process or procedure, use the **minimum** number of steps necessary to accomplish the objective(s). Always use outcome-based thinking to produce practical **solutions** that deliver **results**.
7. **Optimize and automate** - Resources of all types, particularly HR, should be used to their best effect. Eliminate anything that is truly wasteful and use technology to achieve whatever it is capable of. Human intervention should only happen where it really contributes value.

Four Dimensions of Service Management

Version 1.5, May 2021

1. Match each of the following statements to the one of the Four Dimensions of Service Management

A. Organizations and people

C. Partners and suppliers

B. Information and technology

D. Value streams and processes

Answer	Statement
B	1. Artificial intelligence, mobile platforms, cloud solutions, remote collaboration tools, automated testing and deployment tools, machine learning and other cognitive computing solutions, are used at all levels.
D	2. Focuses on what activities the organization undertakes and how they are organized, as well as how the organization ensures that it is enabling value creation for all stakeholders efficiently and effectively.
C	3. Every organization and every service depend, to some extent, on services provided by other organizations.
A	4. It is important to ensure that the structure and management, as well as roles, responsibilities and systems of authority and communication are well-defined and support the overall strategy and operating model.
B	5. Incorporates the relationships between different components of the Service Value System, such as the inputs and outputs of activities and practices.
D	6. Identifying and understanding the series of steps and organization uses to create and deliver products and services to a service consumer is critical to improving overall performance.
A	7. Attention should be paid not only to the skills and competencies of teams or individual members, but also to management and leadership styles, and to communication and collaboration skills.
C	8. Incorporates contracts and other agreements.
B	9. Includes the information and knowledge necessary for service management.
D	10. It defines the activities, workflows, controls and procedures needed to achieve agreed objectives.
A	11. Customers, employees of suppliers, employees of the service provider, or any other stakeholder in the service relationship are a key element.
C	12. Encompasses an organization's relationship with other organizations that are involved in the design development deployment delivery support, and or continual improvement of services.
D	13. Concerned with how the various parts of the organization work in an integrated and coordinated way to enable value creation through products and services.

Value Chain Activities

Version 1.1, May 2021

Fill in the blanks:

1. The purpose of the **plan** value chain activity is to ensure a shared understanding of the vision, current status and improvement direction for all four dimensions and all products and services across the organization.
2. The purpose of the **improve** value chain activity is to ensure continual improvement of products, services and practices across all value chain activities and the four dimensions of service management.
3. The purpose of the **engage** value chain activity is to provide a good understanding of stakeholder needs, transparency, and continual engagement and good relationships with all stakeholders.
4. The purpose of the **design and transition** value chain activity is to ensure that products and services continually meet stakeholder expectations for quality, costs and time-to-market.
5. The purpose of the **obtain and build** value chain activity is to ensure that service components are available when and where they are needed and meet agreed specifications.
6. The purpose of the **deliver and support** value chain activity is to ensure that services are **delivered and supported** according to agreed specifications and stakeholders' expectations.

Definitions of ITIL terms

Version 1.3, May 2021

1. Match the following ITIL Terms with the appropriate definition below:

- | | |
|-----------------------|----------------|
| A. IT asset | E. Incident |
| B. Event | F. Problem |
| C. Configuration item | G. Known error |
| D. Change | |

Answer	Description
B	1. Any change of state that has significance for the management of a configuration item (CI) or IT service.
E	2. An unplanned interruption to a service, or reduction in the quality of a service.
C	3. Any component that needs to be managed in order to deliver an IT service.
A	4. Any valuable component that can contribute to delivery of an IT product or service.
G	5. A problem that has been analysed and has not been resolved.
D	6. The addition, modification, or removal of anything that could have a direct or indirect effect on the delivery of a service.
F	7. A cause, or potential cause, of one or more incidents.

2. Match the following Terms with the appropriate definition below:

- | | |
|------------------------|------------------------------------|
| A. Service consumption | D. Service relationship |
| B. Service offering | E. Service relationship management |
| C. Service provision | |

Answer	Description
B	1. A description of one or more services, designed to address the needs of a target consumer group. This may include goods, access to resources, and service actions.
D	2. A co-operation between a service provider and service consumer. Service relationships include service provision, service consumption and service relationship management.
C	3. Activities performed by an organization to provide services and can also include the supplying of goods.
A	4. Activities performed by an organization to consume services (includes management of the consumer's resources needed to use the service and service actions performed by users).
E	5. Joint activities performed by a service provider and a service consumer to ensure continual value co-creation based on agreed and available service offerings.

Purpose of ITIL practices

Version 1.2, May 2021

Match the following ITIL Practice with the appropriate definition below and identify the seven key practices:

- | | |
|-------------------------------------|-------------------------------|
| A. Information security management | I. Continual improvement |
| B. Relationship management | J. Change enablement |
| C. Supplier management | K. Incident management |
| D. IT asset management | L. Problem management |
| E. Monitoring and event management | M. Service request management |
| F. Release management | N. Service desk |
| G. Service configuration management | O. Service level management |
| H. Deployment management | |

Answer	Description
F	1. Makes new and changed services and features available for use.
K	2. Minimizes the negative impact of incidents by restoring normal service operation as quickly as possible.
M	3. Supports the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner.
A	4. Protects the information needed by the organization to conduct its business.
L	5. Reduces the likelihood and impact of incidents by identifying actual and potential causes of incidents and managing workarounds and known errors.
E	6. Systematically observes services and service components, and records and reports selected changes of state identified as events.
I	7. Aligns the organization's practices and services with changing business needs through the on-going identification and improvement of services, service components, practices or any element involved in the efficient and effective management of products and services.
C	8. Ensures that the organization's suppliers and their performance are managed appropriately to support the provision of seamless, quality products and services.
N	9. Captures demand for incident resolution and service requests.
H	10. Moves new or changed hardware, software, documentation, processes, or any other component to live environments.
O	11. Sets clear business-based targets for service performance, so that the delivery of a service can be properly assessed, monitored and managed against these targets.
B	12. Establishes and nurtures the links between the organization and its stakeholders at strategic and tactical levels.
G	13. Ensure that accurate and reliable information about the configuration of services, and the CIs that support them, is available when and where it is needed.
J	14. Maximizes the number of successful IT changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing a change schedule.
D	15. Plans and manages the full lifecycle of all IT assets.

ITIL Practices Crossword

Version 1.4, May 2021

Key ITIL Practices

Version 1.4, May 2021

Fill in the blanks:

1. The purpose of **problem management** is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents and managing workarounds and known errors. Every service has errors, flaws or vulnerabilities that may cause incidents.
2. The purpose of the **change enablement** practice is to maximize the number of successful IT changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing a change schedule.
3. The purpose of the **service level management** practice is to set clear business-based targets for service performance, so that the delivery of a service can be properly assessed, monitored and managed against these targets. This provides the end to end visibility of the organization's services and requires focus and effort to engage and listen to the requirements, issues, concerns and daily needs of customers
4. The purpose of **incident management** is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible. This can have an enormous impact on customer and user satisfaction, and on how they perceive the service provider.
5. The purpose of the **continual improvement** practice is to align the organization's practices and services with changing business needs through the on-going identification and improvement of services, service components, practices or any element involved in the efficient and effective management of products and services.
6. The purpose of the **service request management** practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner.
7. The purpose of the **service desk** practice is to capture demand for incident resolution and service requests. This provides a clear path for users to report issues, queries and requests, and have them acknowledged, classified, owned and actioned.

The ITIL® 4 Foundation Examination

Sample Paper 1

Answers and Rationales

For exam paper: EN_ITIL4_FND_2019_SamplePaper1_QuestionBk_v1.4

Q	A	Syllabus Ref	Rationale
1	D	6.1.h	A. Incorrect. “The purpose of the change enablement practice is to maximize the number of successful service and product changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing the change schedule”. Ref 5.2.4 B. Incorrect. “The purpose of the release management practice is to make new and changed services and features available for use.” Ref 5.2.9 C. Incorrect. “The purpose of the IT asset management practice is to plan and manage the full lifecycle of all IT assets”. Ref 5.2.6 D. Correct. “The purpose of the deployment management practice is to move new or changed hardware, software, documentation, processes, or any other component to live environments.” Ref 5.3.1
2	A	7.1.f	A. Correct. “Service desks provide a clear path for users to report issues, queries, and requests, and have them acknowledged, classified, owned, and actioned”. Ref 5.2.14 B. Incorrect. The ‘incident management’ practice deals only with incidents, not queries and requests. “The purpose of the incident management practice is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible”. Ref 5.2.5 C. Incorrect. The ‘change enablement’ practice deals only with change requests, not other queries and requests. “The purpose of the change enablement practice is to maximize the number of successful service and product changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing the change schedule”. Ref 5.2.4 D. Incorrect. The ‘service level management’ practice ensures service targets are met. It does not manage queries and requests from users. “The purpose of the service level management practice is to set clear business-based targets for service performance, so that the delivery of a service can be properly assessed, monitored, and managed against these targets”. Ref 5.2.15

Q	A	Syllabus Ref	Rationale
3	C	7.1.g	A. Incorrect. "The purpose of the continual improvement practice is to align the organization's practices and services with changing business needs through the ongoing improvement of products, services, and practices, or any element involved in the management of products and services." Ref 5.1.2 B. Incorrect. "The purpose of the service desk practice is to capture demand for incident resolution and service requests. It should also be the entry point and single point of contact for the service provider with all of its users." Ref 5.2.14 C. Correct. "Service level management identifies metrics and measures that are a truthful reflection of the customer's actual experience and level of satisfaction with the whole service," and "Engagement is needed to understand and confirm the actual ongoing needs and requirements of customers, not simply what is interpreted by the service provider or has been agreed several years before." Ref 5.2.15.1 D. Incorrect. "The purpose of the problem management practice is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents, and managing workarounds and known errors". Ref 5.2.8
4	C	7.1.b	A. Incorrect. While it can be used after deploying a change, this is not the main use of the change schedule. "The change schedule is used to help plan changes, assist in communication, avoid conflicts, and assign resources. It can also be used after changes have been deployed to provide information needed for incident management, problem management, and improvement planning." Ref 5.2.4 B. Incorrect. "Emergency changes: These are changes that must be implemented as soon as possible; for example, to resolve an incident or implement a security patch. Emergency changes are not typically included in a change schedule, and the process for assessment and authorization is expedited to ensure they can be implemented quickly." Ref 5.2.4 C. Correct. "The change schedule is used to help plan changes, assist in communication, avoid conflicts, and assign resources." Ref 5.2.4 D. Incorrect. Standard changes are already pre-authorized and do not need to be included on a change schedule. "These are low-risk, pre-authorized changes that are well understood and fully documented, and can be implemented without needing additional authorization." Ref 5.2.4

Q	A	Syllabus Ref	Rationale
5	D	3.1.d	A. Incorrect. The 'organizations and people' dimension describes "roles and responsibilities, formal organizational structures, culture, and required staffing and competencies." Ref 3.1 B. Incorrect. The 'information and technology' dimension includes "the information and knowledge necessary for the management of services, as well as the technologies required" and "the information created, managed, and used in the course of service provision and consumption, and the technologies that support and enable that service." Ref 3.2 C. Incorrect. "The partners and suppliers dimension encompasses an organization's relationships with other organizations that are involved in the design, development, deployment, delivery, support and/or continual improvement of services. It also incorporates contracts and other agreements between the organization and its partners or suppliers". Ref 3.3 D. Correct. The 'value streams and processes' dimension "focuses on what activities the organization undertakes and how they are organized, as well as how the organization ensures that it is enabling value creation for all stakeholders efficiently and effectively." Ref 3.4
6	A	7.1.c	A. Correct. "More complex incidents will usually be escalated to a support team for resolution. Typically, the routing is based on the incident category, which should help to identify the correct team." Ref 5.2.5 B. Incorrect. The category is concerned with the type of incident whereas priority is determined by business impact. "Incidents are prioritized based on agreed classification to ensure that incidents with the highest business impact are resolved first." Ref 5.2.5 C. Incorrect. "Every incident should be logged and managed to ensure that it is resolved in a time that meets the expectations of the customer and user." Categorization by itself will not ensure this. Ref 5.2.5 D. Incorrect. Customer and user satisfaction determines how the service provider is perceived. "Incident management can have an enormous impact on customer and user satisfaction, and on how customers and users perceive the service provider." Ref 5.2.5

Q	A	Syllabus Ref	Rationale
7	B	1.1.a	A. Incorrect. Warranty is “assurance that a product or service will meet agreed requirements.” Warranty of a service is necessary, but not sufficient to enable value co-creation. Ref 2.5.4 B. Correct. A service is “a means of enabling value co-creation by facilitating outcomes that customers want to achieve, without the customer having to manage specific costs and risks”. Ref 2.3.1 C. Incorrect. Utility is “the functionality offered by a product or service”. Utility of a service is necessary, but not sufficient to enable value co-creation. Ref 2.5.4 D. Incorrect. An output is “a tangible or intangible deliverable of an activity.” The output of a service is necessary, but not sufficient to enable value co-creation. Ref 2.5.1
8	A	7.1.a	A. Correct. “Although everyone should contribute in some way, there should at least be a small team dedicated full-time to leading continual improvement efforts and advocating the practice across the organization.” Ref 5.1.2 B. Incorrect. “Different types of improvements may call for different improvement methods. For example, some improvements may be best organized into a multi-phase project, while others may be more appropriate as a single quick effort.” Ref 5.1.2 C. Incorrect. “The continual improvement practice is integral to the development and maintenance of every other practice.” Ref 5.1.2 D. Incorrect. “When third-party suppliers form part of the service landscape, they should also be part of the improvement effort.” Ref 5.1.2
9	B	7.1.c	A. Incorrect. “Target resolution times are agreed, documented, and communicated to ensure that expectations are realistic.” A good IT service management tool may help the organization to meet these times, but the tool cannot ensure that this happens. Furthermore, identifying the causes of incidents is a ‘problem management’ activity Ref 5.2.5 B. Correct. “Modern IT service management tools can provide automated matching of incidents to other incidents, problems or known errors”. Ref 5.2.5 C. Incorrect. ‘Incident management’ requires supplier contracts to be correctly aligned, but ensuring that the contracts are aligned is a purpose of the ‘supplier management’ practice. Ref 5.1.13 D. Incorrect. “The most complex incidents, and all major incidents, often require a temporary team to work together to identify the resolution”. “Investigation of more complicated incidents often requires knowledge and expertise, rather than procedural steps.” Ref 5.2.5

Q	A	Syllabus Ref	Rationale
10	A	7.1.e	A. Correct. "The purpose of the service request management practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests..." and a service request is defined as "a request from a user or a user's authorized representative that initiates a service action". Ref 5.2.16 B. Incorrect. A customer is "the role that defines the requirements for a service and takes responsibility for the outcomes of service consumption". A customer could also be a user, and in that role they may submit a service request. Ref 2.2.2 C. Incorrect. A sponsor is "the role that authorizes budget for service consumption." A sponsor could also be a user, and in that role they may submit a service request. Ref 2.2.2 D. Incorrect. "The partners and suppliers dimension encompasses an organization's relationships with other organizations that are involved in the design, development, deployment, delivery, support, and/or continual improvement of services.". This does not include consumption of services, and "The purpose of the service request management practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests." Ref 3.3, 5.2.16
11	C	7.1.f	A. Incorrect. "The purpose of the incident management practice is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible." The 'incident management' practice does not provide a single point of contact for service users. Ref 5.2.5 B. Incorrect. "The purpose of the change enablement practice is to maximize the number of successful service and product changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing the change schedule." The 'change enablement' practice does not provide a single point of contact for service users. Ref 5.2.4 C. Correct. "The purpose of the service desk practice is to capture demand for incident resolution and service requests. It should also be the entry point and single point of contact for the service provider with all of its users." Ref 5.2.14 D. Incorrect. "The purpose of the service request management practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner." The 'service request management' practice does not provide a single point of contact for service users. Ref 5.2.16

Q	A	Syllabus Ref	Rationale
12	A	2.2.e	A. Correct. The 'think and work holistically' guiding principle advises that all aspects of an organization are considered when providing value in the form of services. This includes all four dimensions of service management (organizations and people; information and technology; partners and suppliers; value streams and processes). "Services are delivered to internal and external service consumers through the coordination and integration of the four dimensions of service management." Ref 4.3.5 B. Incorrect. The 'progress iteratively with feedback' guiding principle is concerned with breaking initiatives into manageable sections that can be executed more easily. It is not primarily concerned with addressing the four dimensions of service management. Ref 4.3.3 C. Incorrect. The 'focus on value' guiding principle ensures that everything that the organization does links back to providing value to service consumers. It is not primarily concerned with addressing the four dimensions of service management. Ref 4.3.1 D. Incorrect. The 'keep it simple and practical' guiding principle focuses on keeping things simple by reducing complexity and eliminating unnecessary activities and steps. It is not primarily concerned with addressing the four dimensions of service management. Ref 4.3.6
13	B	7.1.e	A. Incorrect. This would be supported by the 'change enablement' practice. A change is "the addition, modification, or removal of anything that could have a direct or indirect effect on services." Normal changes "need to be scheduled, assessed, and authorized". Ref 5.2.4 B. Correct. A service request is "a request from a user or a user's authorized representative that initiates a service action which has been agreed as a normal part of service delivery." Ref 5.2.16 C. Incorrect. This would be supported by the 'incident management' practice. An incident is "an unplanned interruption to a service or reduction in the quality of a service." Ref 5.2.5 D. Incorrect. This would be supported by the 'problem management' practice. A problem is "a cause, or potential cause, of one or more incidents". Ref 5.2.8

Q	A	Syllabus Ref	Rationale
14	D	7.1.a	A. Incorrect. The 'service level management' practice is not the responsibility of everyone in the organization. A number of roles are required but there is no fixed structure. It is recommended that there is an independent and non-aligned role where possible. Ref 5.2.15 B. Incorrect. The 'change enablement' practice is not the responsibility of everyone in the organization. Many roles can be assigned to change enablement such as change authority. It also requires input from people with specialist knowledge. Ref 5.2.4 C. Incorrect. The 'problem management' practice is not the responsibility of everyone in the organization. Most problem management activity relies on the knowledge and experience of staff. Ref 5.2.8 D. Correct. "continual improvement is everyone's responsibility" and "The commitment to and practice of continual improvement must be embedded into every fibre of the organization". Ref 5.1.2
15	D	6.1.a	A. Incorrect. "The purpose of the information security management practice is to protect the information needed by the organization to conduct its business. This includes understanding and managing risks to the confidentiality, integrity, and availability of information, as well as other aspects of information security such as authentication (ensuring someone is who they claim to be) and non-repudiation (ensuring that someone can't deny that they took an action)." Ref 5.1.3 B. Incorrect. "The purpose of the information security management practice is to protect the information needed by the organization to conduct its business. This includes understanding and managing risks to the confidentiality, integrity and availability of information, as well as other aspects of information security such as authentication (ensuring someone is who they claim to be) and non-repudiation (ensuring that someone can't deny that they took an action)." Ref 5.1.3 C. Incorrect. "The purpose of the information security management practice is to protect the information needed by the organization to conduct its business. This includes understanding and managing risks to the confidentiality, integrity and availability of information, as well as other aspects of information security such as authentication (ensuring someone is who they claim to be) and non-repudiation (ensuring that someone can't deny that they took an action)." Ref 5.1.3 D. Correct. "The purpose of the information security management practice is to protect the information needed by the organization to conduct its business. This includes understanding and managing risks to the confidentiality, integrity and availability of information, as well as other aspects of information security such as authentication (ensuring someone is who they claim to be) and non-repudiation (ensuring that someone can't deny that they took an action)." Ref 5.1.3

Q	A	Syllabus Ref	Rationale
16	B	2.2.b	A. Incorrect. The 'focus on value' guiding principle states that "All activities conducted by the organization should link back, directly or indirectly, to value for itself, its customers, and other stakeholders." Ref 4.3.1 B. Correct. The 'start where you are' guiding principle recommends that "Services and methods already in place should be measured and/or observed directly to properly understand their current state and what can be reused from them... Getting data from the source helps to avoid assumptions which, if proven to be unfounded, can be disastrous to timelines, budgets and the quality of results." Ref 4.3.2 C. Incorrect. The 'keep it simple and practical' guiding principle states that an organization should "Always use the minimum number of steps needed to accomplish an objective." Ref 4.3.6 D. Incorrect. The 'progress iteratively with feedback principle states that "By organizing work into smaller, manageable sections that can be executed and completed in a timely manner, the focus on each effort will be sharper and easier to maintain." Ref 4.3.3
17	C	7.1.c	A. Incorrect. "There may be scripts for collecting information from users during initial contact". Ref 5.2.5 B. Incorrect. "There should be a formal process for logging and managing incidents." Ref 5.2.5 C. Correct. "This process does NOT usually include detailed procedures for how to diagnose, investigate, and resolve incidents." Ref 5.2.5 D. Incorrect. "Investigation of more complicated incidents often requires knowledge and expertise, rather than procedural steps." Ref 5.2.5
18	A	2.1	A. Correct. A guiding principle is defined as a recommendation that can guide an organization in all circumstances and will guide organizations when adopting service management. They are not described as prescriptive or mandatory. Ref 4.3 B. Incorrect. The guiding principles will be reviewed and adopted by organizations. The guiding principles guide organizations to make decisions and adopt actions. They do not mandate specific actions and decisions. Ref 4.3.8 C. Incorrect. Organizations will use the principles relevant to them and are not mandated to use a given number. Ref 4.3 D. Incorrect. The guiding principles guide organizations to make decisions and adopt actions. They are not mandatory. Ref 4.3

Q	A	Syllabus Ref	Rationale
19	B	7.1.b	A. Incorrect. "It is essential that the correct change authority is assigned to each type of change to ensure that change enablement is both efficient and effective." For normal changes, "change models based on the type of change determine the roles for assessment and authorization". A single change authority is inadequate. Ref 5.2.4 B. Correct. "It is essential that the correct change authority is assigned to each type of change to ensure that change enablement is both efficient and effective." For normal changes, "change models based on the type of change determine the roles for assessment and authorization". Ref 5.2.4 C. Incorrect. Normal changes are "changes that need to be scheduled, assessed, and authorized following a process." Thus, all normal changes will be authorized by a change authority. Standard changes can be pre-authorized: "These are low-risk, pre-authorized changes that are well understood and fully documented, and can be implemented without needing additional authorization". Ref 5.2.4 D. Incorrect. "Emergency changes are not typically included in a change schedule, and the process for assessment and authorization is expedited to ensure they can be implemented quickly." Therefore, all emergency changes will be authorized by a change authority. Ref 5.2.4
20	C	6.1.f	A. Incorrect. "The purpose of the change enablement practice is to maximize the number of successful service and product changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing the change schedule." Ref 5.2.4 B. Incorrect. "The purpose of the service request management practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner". Ref 5.2.16 C. Correct. "The purpose of the release management practice is to make new and changed services and features available for use". Ref 5.2.9 D. Incorrect. "The purpose of the deployment management practice is to move new or changed hardware, software, documentation, processes, or any other component to live environments." Ref 5.3.1

Q	A	Syllabus Ref	Rationale
21	B	5.2.a	A. Incorrect. The purpose of the 'improve' value chain activity is "to ensure continual improvement of products, services, and practices across all value chain activities and the four dimensions of service management." Ref 4.5.2 B. Correct. The purpose of the 'plan' value chain activity is "to ensure a shared understanding of the vision, current status, and improvement direction for all four dimensions and all products and services across the organization." Ref 4.5.1 C. Incorrect. The purpose of the 'deliver and support' value chain activity is "to ensure that services are delivered and supported according to agreed specifications and stakeholders' expectations." Ref 4.5.6 D. Incorrect. The purpose of the 'obtain/build' value chain activity is "to ensure that service components are available when and where they are needed, and meet agreed specifications." Ref 4.5.5
22	D	5.1	A. Incorrect. "Value chain activities use different combinations of ITIL practices". No practice belongs to a single value chain activity. Ref 4.5 B. Incorrect. Service value streams are "specific combinations of activities and practices, and each one is designed for a particular scenario" and "Service relationships include service provision, service consumption, and service relationship management." Ref 4.5, 2.4.1 C. Incorrect. Service value streams are "specific combinations of activities and practices, and each one is designed for a particular scenario." There can be multiple service value streams within one service value chain. Ref 4.5 D. Correct. "These activities represent the steps an organization takes in the creation of value. Each activity transforms inputs into outputs. These inputs can be demand from outside the value chain or outputs of other activities. All the activities are interconnected, with each activity receiving and providing triggers for further action." Ref 4.5

Q	A	Syllabus Ref	Rationale
23	A	6.1.c	A. Correct. "The purpose of the supplier management practice is to ensure that the organization's suppliers and their performance are managed appropriately to support the seamless provision of quality products and services". Ref 5.1.13 B. Incorrect. "The purpose of the continual improvement practice is to align the organization's practices and services with changing business needs through the ongoing improvement of products, services, and practices, or any element involved in the management of products and services." This is not the purpose of the 'supplier management' practice. An organization is unlikely to change its practices to suit a supplier's needs. Ref 5.1.2 C. Incorrect. "The purpose of the relationship management practice is to establish and nurture the links between the organization and its stakeholders at strategic and tactical levels". This is not the purpose of the 'supplier management' practice. Ref 5.1.9 D. Incorrect. "The purpose of the service configuration management practice is to ensure that accurate and reliable information about the configuration of services, and the CIs that support them, is available when and where it is needed". This is not the purpose of the 'supplier management' practice. Ref 5.2.11
24	B	1.2.a	A. Incorrect. The price of the service is only part of the costs imposed on the consumer. The cost of creating the service is a concern of the service provider, not the service consumer. The service consumer should also evaluate the costs removed from the consumer. Ref 2.5.2 B. Correct. From the service consumer's perspective, there are two types of costs involved in service relationships: 1. Costs removed from the service consumer by the service (a part of the value proposition). This may include costs of staff, technology, and other resources which are not needed by the consumer. 2. Costs imposed on the consumer by the service (the costs of service consumption). The total cost of consuming a service includes the price charged by the service provider (if any), plus other costs such as staff training, costs of network utilization, procurement, etc. Ref 2.5.2 C. Incorrect. The cost of provisioning the service, and the cost of improving the service are concerns of the service provider, not the service consumer. The service consumer should evaluate the costs removed from the consumer and the costs imposed on the consumer. Ref 2.5.2 D. Incorrect. The two types of cost that a service consumer should evaluate are costs removed from the consumer and costs imposed on consumers. The cost of hardware and software may be included in either of these, but will only be part of that cost. Ref 2.5.2

Q	A	Syllabus Ref	Rationale
25	C	6.1.n	A. Incorrect. “The purpose of the problem management practice is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents, and managing workarounds and known errors.” Ref 5.2.8 B. Incorrect. “The purpose of the change enablement practice is to maximize the number of successful service and product changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing the change schedule.” Ref 5.2.4 C. Correct. “The purpose of the service desk practice is to capture demand for incident resolution and service requests. It should also be the entry point and single point of contact for the service provider with all of its users.” Ref 5.2.14 D. Incorrect. “The purpose of the service level management practice is to set clear business-based targets for service performance, so that the delivery of a service can be properly assessed, monitored, and managed against these targets.” Ref 5.2.15
26	B	7.1.a	A. Incorrect. The guidance describes how there are many methods that can be used for improvement initiatives and warns against using too many. It further states that “Different types of improvement may call for different improvement methods”. Therefore, using a new method each time is inappropriate. Ref 5.1.2 B. Correct. The guidance describes how there are many methods that can be used for improvement initiatives and warns against using too many. The guidance states “It is a good idea to select a few key methods that are appropriate to the types of improvement the organization typically handles and to cultivate those methods”. Ref 5.1.2 C. Incorrect. The guidance describes how there are many methods that can be used for improvement initiatives and warns against using too many. Ref 5.1.2 D. Incorrect. The guidance describes how there are many methods that can be used for improvement initiatives and warns against using too many. It further states that “Different types of improvements may call for different improvement methods”. Therefore, selecting a single method is inappropriate. Ref 5.1.2

Q	A	Syllabus Ref	Rationale
27	D	4.1	A. Incorrect. The seven guiding principles are 'focus on value', 'start where you are', 'progress iteratively with feedback', 'collaborate and promote visibility', 'think and work holistically', 'keep it simple and practical' and 'optimize and automate'. Ref 4.3 B. Incorrect. The four dimensions of service management are 'organizations and people', 'information and technology', 'partners and suppliers', and 'value streams and processes'. Ref 3.1-3.4 C. Incorrect. The activities of the service value chain are 'plan', 'improve', 'engage', 'design and transition', 'obtain/build', and 'deliver and support'. Ref 4.5 D. Correct. The components of the service value system are 'guiding principles', 'governance', 'service value chain', 'practices', and 'continual improvement'. Ref 4.1
28	C	7.1.f	A. Incorrect. "With increased automation, AI, robotic process automation (RPA), and chatbots, service desks are moving to provide more self-service logging and resolution directly via online portals and mobile applications." Ref 5.2.14 B. Incorrect. "The service desk may not need to be highly technical, although some are." Ref 5.2.14 C. Correct. "Another key aspect of a good service desk is its practical understanding of the wider organization, the business processes, and the users." Ref 5.2.14 D. Incorrect. "In some cases, the service desk is a tangible team, working in a single location... In other cases, a virtual service desk allows agents to work from multiple locations, geographically dispersed." Ref 5.2.14
29	C	2.2.c	A. Incorrect. The 'Focus on value' guiding principle helps to ensure that you consider all aspects of value for the service consumer, as well as the service provider and other stakeholders. It does not specifically describe organizing work into smaller, manageable sections that can be executed and completed in a timely manner. Ref 4.3.1 B. Incorrect. The 'Start where you are' guiding principle helps to avoid waste and leverage existing services, processes, people, tools, etc. It does not specifically describe organizing work into smaller, manageable sections that can be executed and completed in a timely manner. Ref 4.3.2 C. Correct. The description of the 'progress iteratively with feedback' guiding principle says "by organizing work into smaller, manageable sections that can be executed and completed in a timely manner, the focus on each effort will be sharper and easier to maintain." Ref 4.3.3 D. Incorrect. The 'collaborate and promote visibility' guiding principle helps to involve the right people and provide better decision-making and greater likelihood of success. It does not specifically describe organizing work into smaller, manageable sections that can be executed and completed in a timely manner. Ref 4.3.4

Q	A	Syllabus Ref	Rationale
30	A	7.1.b	A. Correct. "These are low-risk, pre-authorized changes that are well understood and fully documented, and can be implemented without needing additional authorization. They are often initiated as service requests, but may also be operational changes. When the procedure for a standard change is created or modified, there should be a full risk assessment and authorization as for any other change. This risk assessment does not need to be repeated each time the standard change is implemented; it only needs to be done if there is a modification to the way it is carried out." Ref 5.2.4 B. Incorrect. Normal changes are "changes that need to be scheduled, assessed, and authorized." Ref 5.2.4 C. Incorrect. An emergency change that is needed to resolve an incident should still be assessed and authorized. "As far as possible, emergency changes should be subject to the same testing, assessment, and authorization as normal changes". Ref 5.2.4 D. Incorrect. This is a description of a normal change: "changes that need to be scheduled, assessed, and authorized". Ref 5.2.4
31	C	7.1.d	A. Incorrect. A change request is only raised if it is justified. "Error control also includes identification of potential permanent solutions which may result in a change request for implementation of a solution, but only if this can be justified in terms of cost, risks, and benefits". Ref 5.2.8 B. Incorrect. The 'incident management' practice restores service not the 'problem management' practice. "The purpose of the incident management practice is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible.". Ref 5.2.5 C. Correct. "An effective incident workaround can become a permanent way of dealing with some problems when resolving the problem is not viable or cost-effective. In this case, the problem remains in the known error status, and the documented workaround is applied should related incidents occur". Ref 5.2.8 D. Incorrect. The problem record is not deleted. "Workarounds are documented in problem records". "... the problem remains in the known error status, and the documented workaround is applied should related incidents occur". Ref 5.2.8

Q	A	Syllabus Ref	Rationale
32	A	6.2.d	A. Correct. A change is the “addition, modification, or removal of anything that could have a direct or indirect effect on services”. Ref 5.2.4 B. Incorrect. “The purpose of the service configuration management practice is to ensure that accurate and reliable information about the configuration of services, and the CIs that support them, is available when and where it is needed.” Ref 5.2.11 C. Incorrect. “The purpose of the release management practice is to make new and changed services and features available for use”. Ref 5.2.9 D. Incorrect. “The purpose of the deployment management practice is to move new or changed hardware, software, documentation, processes, or any other component to live environments.” Ref 5.3.1
33	A	6.2.b	A. Correct. “An event can be defined as any change of state that has significance for the management of a service or other configuration item (CI)”. Ref 5.2.7 B. Incorrect. The definition of a configuration item is “any component that needs to be managed in order to deliver an IT service.” Ref 5.2.11 C. Incorrect. An incident is “An unplanned interruption to a service or reduction in the quality of a service.” Ref 5.2.5 D. Incorrect. An IT asset is “Any financially valuable component that can contribute to the delivery of an IT product or service.” Ref 5.2.11
34	C	1.2.d	A. Incorrect. “A tangible or intangible deliverable of an activity” is the definition of an output, not an outcome. Ref 2.5.1 B. Incorrect. “The functionality offered by a product or service to meet a particular need” is the definition of utility, not an outcome. The utility of the service may facilitate outcomes. Ref 2.5.4 C. Correct. An outcome is “a result for a stakeholder enabled by one or more outputs”. The definition of a service describes how the value of a service enables value co-creation by facilitating outcomes that customers want to achieve. Ref 2.5.1 D. Incorrect. A product is “a configuration of an organization’s resources designed to offer value for a consumer.” Ref 2.3.1

Q	A	Syllabus Ref	Rationale
35	D	3.1.b	A. Incorrect. “The challenges of information management, such as those presented by security and regulatory compliance requirements, are also a focus of [the ‘information and technology] dimension”. Ref 3.2 B. Incorrect. “The technologies that support service management include, but are not limited to, workflow management systems, knowledge bases, inventory systems, communication systems, and analytical tools”. Ref 3.2 C. Incorrect. “The technologies that support service management include, but are not limited to, workflow management systems, knowledge bases, inventory systems, communication systems, and analytical tools.” Ref 3.2 D. Correct. “The organizations and people dimension of a service covers roles and responsibilities, formal organizational structures, culture, and required staffing and competencies, all of which are related to the creation, delivery, and improvement of a service.” Ref 3.1
36	D	7.1.d	D. Correct. (1) “Problem management activities can identify improvement opportunities in all four dimensions of service management. Solutions can in some cases be treated as improvement opportunities, so they are included in a continual improvement register (CIR), and continual improvement techniques are used to prioritize and manage them.” (4) “Error control also includes identification of potential permanent solutions which may result in a change request for implementation of a solution.” Ref 5.2.8 A, B C. Incorrect. (2) “The purpose of the service request management practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner.” Ref 5.2.16 (3) “The purpose of the service level management practice is to set clear business-based targets for service levels, and to ensure that delivery of services is properly assessed, monitored, and managed against these targets.” Ref 5.2.15

Q	A	Syllabus Ref	Rationale
37	B	2.2.f	A. Incorrect. "Trying to provide a solution for every exception will often lead to over-complication. When creating a process or a service, designers need to think about exceptions, but they cannot cover them all. Instead, rules should be designed that can be used to handle exceptions generally." Ref 4.3.6 B. Correct. The 'keep it simple and practical' guiding principle states: "When analyzing a practice, process, service, metric, or other improvement target, always ask whether it contributes to value creation." Ref 4.3.6.1 C. Incorrect. "When designing, managing, or operating practices, be mindful of conflicting objectives ... the organization should agree on a balance between its competing objectives." Ref 4.3.6.2 D. Incorrect. "It is better to start with an uncomplicated approach and then carefully add controls, activities, or metrics when it is seen that they are truly needed." Ref 4.3.6.1
38	C	2.2.a	A. Incorrect. It is essential to determine who the service consumer is, and what they value. The outcomes should be based on this understanding, rather than determining them. "The first step in focusing on value is knowing who is being served. In each situation the service provider must, therefore, determine who the service consumer is". Ref 4.3.1.1 B. Incorrect. Suppliers and partners are possible stakeholders, but it is important to identify the service consumer first. "The first step in focusing on value is knowing who is being served. In each situation the service provider must, therefore, determine who the service consumer is". Ref 4.3.1.1 C. Correct. "The first step in focusing on value is knowing who is being served. In each situation the service provider must, therefore, determine who the service consumer is". Ref 4.3.1.1 D. Incorrect. The cost of providing the service may have some impact on the value from the perspective of the service provider. But "The first step in focusing on value is knowing who is being served. In each situation the service provider must, therefore, determine who the service consumer is". Ref 4.3.1.1

Q	A	Syllabus Ref	Rationale
39	D	1.3.a	A. Incorrect. The combination of things described in this option may help to create value, but it is not an example of value. Value is “the perceived benefits, usefulness and importance of something.” Ref 2.1 B. Incorrect. The combination of things described in this option may help to create an outcome, but it is not an example of an outcome. Outcome is “a result for a stakeholder enabled by one or more outputs.” Ref 2.5.1 C. Incorrect. Warranty is “assurance that a product or service will meet agreed requirements.” New functionality may or may not affect warranty. Ref 2.5.4 D. Correct. Service providers define combinations of goods, access to resources and service actions, to address the needs of different consumer groups. These combinations are called service offerings. Ref 2.3.2
40	B	1.1.c	A. Incorrect. An output is “A tangible or intangible deliverable of an activity”. Ref 2.5.1 B. Correct. Warranty is “assurance that a product or service will meet agreed requirements.” Ref 2.5.4 C. Incorrect. A risk is “a possible event that could cause harm or loss, or make it more difficult to achieve objectives”. Ref 2.5.3 D. Incorrect. Utility is “the functionality offered by a product or service to meet a particular need”. Ref 2.5.4

The ITIL® 4 Foundation Examination

Sample Paper 2

Answers and Rationales

The ITIL® 4 Foundation Examination

For exam paper: EN_ITIL4_FND_2019_SamplePaper2_QuestionBk_v1.2

Q	A	Syllabus Ref	Rationale
1	A	7.1.f	A. Correct. "With increased automation... The impact on service desks is reduced phone contact, less low-level work, and a greater ability to focus on excellent CX when personal contact is needed". Ref 5.2.14 B. Incorrect. The effect of automation is to increase self-service, not to decrease it. "With increased automation, AI, robotic process automation (RPA), and chatbots, service desks are moving to provide more self-service logging and resolution directly via online portals and mobile applications". Ref 5.2.14 C. Incorrect. The opposite is true. "With increased automation and the gradual removal of technical debt, the focus of the service desk is to provide support for 'people and business' rather than simply technical issues". Ref 5.2.14 D. Incorrect. The use of automation will not eliminate the need to escalate incidents. "A key point to be understood is that, no matter how efficient the service desk and its people are, there will always be issues that need escalation and underpinning support from other teams". Ref 5.2.14
2	B	1.2.g	A. Incorrect. Cost is "The amount of money spent on a specific activity or resource." Ref 2.5.2 B. Correct. Utility is "The functionality offered by a product or service." Ref 2.5.4 C. Incorrect. Warranty is "Assurance that a product or service will meet agreed requirements". Ref 2.5.4 D. Incorrect. A risk is "A possible event that could cause harm or loss, or make it more difficult to achieve objectives". Ref 2.5.3
3	B	6.1.e	A. Incorrect. "The purpose of the service configuration management practice is to ensure that accurate and reliable information about the configuration of services, and the CIs that support them, is available when and where it is needed". Ref 5.2.11 B. Correct. "The purpose of the monitoring and event management practice is to systematically observe services and service components, and record and report selected changes of state identified as events". Ref 5.2.7 C. Incorrect. "The purpose of the information security management practice is to protect the information needed by the organization to conduct its business". Ref 5.1.3 D. Incorrect. "The purpose of the incident management practice is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible". Ref 5.2.5

Q	A	Syllabus Ref	Rationale
4	B	7.1.a	A. Incorrect. How services are measured is important, however only accurate data can drive fact-based decisions for improvement. Ref 5.1.2 B. Correct. "Accurate data, carefully analyzed and understood, is the foundation of fact-based decision-making for improvement." The 'continual improvement' practice should be supported by relevant data sources and by skilled data analytics to ensure that each potential improvement situation is sufficiently understood. Ref 5.1.2 C. Incorrect. A balanced scorecard is one input to making a decision, but on its own it does not serve as the foundation for fact-based decisions. Ref 5.1.2 D. Incorrect. Maturity assessments are useful but they provide only one piece of information, as opposed to providing the foundations for decision-making in the continual improvement practice. Ref 5.1.2
5	B	5.1	A. Incorrect. Demand is the input to the service value chain. Value chain activities "represent the steps an organization takes in the creation of value. Each activity contributes to the value chain by transforming specific inputs into outputs." Ref 4.5 B. Correct. "To convert inputs into outputs, the value chain activities use different combinations of ITIL practices." Ref 4.5 C. Incorrect. It uses various resources from different practices when needed. "To convert inputs into outputs, the value chain activities use different combinations of ITIL practices (sets of resources for performing certain types of work), drawing on internal or third-party resources, processes, skills, and competencies as required." Ref 4.5 D. Incorrect. The 'optimize and automate' guiding principle recommends that activities should be automated where this is practical but the service value chain does not require automation. "Technology should not always be relied upon without the capability of human intervention, as automation for automation's sake can increase costs and reduce organizational robustness and resilience." Ref 4.3.7

Q	A	Syllabus Ref	Rationale
6	D	7.1.g	D. Correct. (1) (4) "Customer engagement: This involves initial listening, discovery, and information capture on which to base metrics, measurement, and ongoing progress discussions." Ref 5.2.15 A, B, C. Incorrect. (2) Service level management "ensures the organization meets the defined service levels through the collection, analysis, storage, and reporting of the relevant metrics for the identified services," not just through customer engagement. Ref 5.2.15 (3) It may define the requirements for service requests but defining the workflow is part of 'service request management'. "When new service requests need to be added to the service catalogue, existing workflow models should be leveraged whenever possible." Ref 5.2.16
7	B	2.2.g	A. Incorrect. This is step 4 of the principle 'optimize and automate': "Ensure the optimization has the appropriate level of stakeholder engagement and commitment." Ref 4.3.7.1 B. Correct. The first step of the principle 'optimize and automate' is: "Understand and agree the context in which the proposed optimization exists. This includes agreeing the overall vision and objectives of the organization." Ref 4.3.7.1 C. Incorrect. This is step 2 of the principle 'optimize and automate': "Assess the current state of the proposed optimization. This will help to understand where it can be improved and which improvement opportunities are likely to produce the biggest positive impact." Ref 4.3.7.1 D. Incorrect. This is step 3 of the principle 'optimize and automate': "Agree what the future state and priorities of the organization should be, focusing on simplification and value. This typically also includes standardization of practices and services, which will make it easier to automate or optimize further at a later point." Ref 4.3.7.1

Q	A	Syllabus Ref	Rationale
8	C	4.1	A. Incorrect. The 'focus on value' guiding principle guides an organization to consider the needs of the service consumer. It cannot ensure that the organization continually co-creates value with all stakeholders. Ref 4.3.1 B. Incorrect. The four dimensions "represent perspectives which are relevant to the whole SVS, including the entirety of the service value chain and all ITIL practices." They do not ensure that the organization continually co-creates value with all stakeholders. Ref 3 C. Correct. "The purpose of the SVS is to ensure that the organization continually co-creates value with all stakeholders through the use and management of products and services." Ref 4.1 D. Incorrect. The purpose of the 'service request management' practice is to "support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner." It doesn't ensure that the organization continually co-creates value with all stakeholders. Ref 5.2.16
9	B	7.1.e	A. Incorrect. "The purpose of the change enablement practice is to maximize the number of successful service and product changes by ensuring that risks have been properly assessed, authorizing changes to proceed, and managing the change schedule." Ref 5.2.4 B. Correct. "The purpose of the service request management practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner," and "Each service request may include one or more of the following: ... feedback, compliments, and complaints (for example, complaints about a new interface or compliments to a support team)." Ref 5.2.16 C. Incorrect. "The purpose of the problem management practice is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents, and managing workarounds and known errors." Ref 5.2.8 D. Incorrect. "The purpose of the incident management practice is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible." Ref 5.2.5

Q	A	Syllabus Ref	Rationale
10	D	1.3.b	A. Incorrect. Service provision is not a joint activity; it is performed by a service provider. Ref 2.4.1 B. Incorrect. Service consumption is not a joint activity; it is performed by a service consumer. Ref 2.4.1 C. Incorrect. Service offering is not an activity; it is "A description of one or more services, designed to address the needs of a target consumer group. A service offering may include goods, access to resources, and service actions". Ref 2.3.2 D. Correct. Service relationship management is "Joint activities performed by a service provider and a service consumer to ensure continual value co-creation based on agreed and available service offerings". Ref 2.4.1
11	A	7.1.c	A. Correct. "In some extreme cases, disaster recovery plans may be invoked to resolve an incident." Ref 5.2.5 B. Incorrect. "Service requests are a normal part of service delivery and are not a failure or degradation of service, which are handled as incidents." Ref 5.2.16 C. Incorrect. "The purpose of the service level management practice is to set clear business-based targets for service levels, and to ensure that delivery of services is properly assessed, monitored, and managed against these targets." Ref 5.2.15 D. Incorrect. "The purpose of the IT asset management practice is to plan and manage the full lifecycle of all IT assets." Asset management "includes the acquisition, operation, care and disposal of organizational assets." Ref 5.2.6
12	C	7.1.e	A. Incorrect. "Normal changes: These are changes that need to be scheduled, assessed, and authorized". This is supported by the 'change enablement' practice, not by 'service request management'. Ref 5.2.4 B. Incorrect. "As far as possible, emergency changes should be subject to the same testing, assessment, and authorization as normal changes." This is supported by the 'change enablement' practice, not by 'service request management'. Ref 5.2.4 C. Correct. "Fulfilment of service requests may include changes to services or their components; usually these are standard changes." and "Standard changes: These are low-risk, pre-authorized changes that are well understood and fully documented, and can be implemented without needing additional authorization. They are often initiated as service requests". Ref 5.2.16, 5.2.4 D. Incorrect. "The scope of change enablement is defined by each organization. It will typically include all IT infrastructure, applications, documentation, processes". Some application changes may be managed as standard changes, but others will be normal or emergency changes and will be supported by the 'change enablement' practice. Ref 5.2.4

Q	A	Syllabus Ref	Rationale
13	B	2.2.d	A. Incorrect. 'Focus on value' states that all improvement work should deliver measurable value for customers and other stakeholders, but it does not specifically highlight the need to understand the flow of work, identify bottlenecks, and uncover waste. Ref 4.3.1 B. Correct. 'Collaborate and promote' visibility states "Insufficient visibility of work leads to poor decision-making, which in turn impacts the organization's ability to improve internal capabilities. It will then become difficult to drive improvements as it will not be clear which ones are likely to have the greatest positive impact on results. To avoid this, the organization needs to perform such critical analysis activities as: understanding the flow of work in progress; identifying bottlenecks, as well as excess capacity; and uncovering waste". Ref 4.3.4.3 C. Incorrect. 'Think and work holistically' states that the organization should work in an integrated way on the whole, not just on the parts, but it does not specifically highlight the need to understand the flow of work, identify bottlenecks, and uncover waste. Ref 4.3.5 D. Incorrect. 'Keep it simple and practical' states that the organization should use the minimum number of steps, and eliminate steps that produce no useful outcome. This does imply that you should uncover waste, but it does not specifically highlight the need to understand the flow of work and identify bottlenecks. Ref 4.3.6
14	A	1.1.a	A. Correct. A service is "A means of enabling value co-creation by facilitating outcomes that customers want to achieve, without the customer having to manage specific costs and risks." Ref 2.3.1 B. Incorrect. An output is "A tangible or intangible deliverable of an activity." Ref 2.5.1 C. Incorrect. Practices are "Sets of organizational resources designed for performing work or accomplishing an objective." Ref 4.1 D. Incorrect. 'Continual improvement' is a practice "to align the organization's practices and services with changing business needs." Ref 5.1.2

Q	A	Syllabus Ref	Rationale
15	A	7.1.b	A. Correct. "It is essential that the correct change authority is assigned to each type of change to ensure that change enablement is both efficient and effective." Ref 5.2.4 B. Incorrect. There is no rule that centralizing change authority is the most effective method. In some cases, decentralizing decision-making is better: "In high-velocity organizations, it is a common practice to decentralize change approval, making the peer review a top predictor of high performance." Ref 5.2.4 C. Incorrect. This answer confuses normal changes with emergency changes. "Emergency changes are not typically included in a change schedule, and the process for assessment and authorization is expedited to ensure they can be implemented quickly." Ref 5.2.4 D. Incorrect. Standard changes are usually low risk and pre-authorized. "These are low-risk, pre-authorized changes that are well understood and fully documented, and can be implemented without needing additional authorization." Ref 5.2.4
16	A	3.1.a	A. Correct. "It is important to ensure that the way an organization is structured and managed, as well as its roles, responsibilities, and systems of authority and communication, is well defined and supports its overall strategy and operating model." Ref 3.1 B. Incorrect. The 'information and technology' dimension "includes the information and knowledge necessary for the management of services, as well as the technologies required. It also incorporates the relationships between different components of the SVS, such as the inputs and outputs of activities and practices." Ref 3.2 C. Incorrect. "The partners and suppliers dimension encompasses an organization's relationships with other organizations that are involved in the design, development, deployment, delivery, support and/or continual improvement of services. It also incorporates contracts and other agreements between the organization and its partners or suppliers." Ref 3.3 D. Incorrect. The 'value streams and processes' dimension "is concerned with how the various parts of the organization work in an integrated and coordinated way to enable value creation through products and services." Ref 3.4

Q	A	Syllabus Ref	Rationale
17	B	6.2.g	A. Incorrect. A known error is "A problem that has been analyzed but has not been resolved". If a problem has been logged but not analyzed, it would not be considered a known error. Ref 5.2.8 B. Correct. A known error is "A problem that has been analyzed but has not been resolved". Ref 5.2.8 C. Incorrect. A known error is "A problem that has been analyzed but has not been resolved" – it may or may not be escalated. Ref 5.2.8 D. Incorrect. A known error is "A problem that has been analyzed but has not been resolved". If a problem has been closed, it would not be considered a known error. Ref 5.2.8
18	A	7.1.d	A. Correct. Known errors "are problems where initial analysis has been completed; it usually means that faulty components have been identified... the problem remains in the known error status, and the documented workaround is applied". Ref 5.2.8 B. Incorrect. A problem is "A cause, or potential cause, of one or more incidents." A known error is "A problem that has been analyzed but has not been resolved." A known error does not cause problems; they are problems that have been analyzed but not yet resolved. Ref 5.2.8 C. Incorrect. Both known errors and problems cause incidents. A problem is "A cause, or potential cause, of one or more incidents." A known error is "A problem that has been analyzed but has not been resolved." Both problems and known errors may be vulnerabilities: "Every service has errors, flaws, or vulnerabilities that may cause incidents." Ref 5.2.8 D. Incorrect. "Many problem management activities rely on the knowledge and experience of staff, rather than on following detailed procedures. People responsible for diagnosing problems often need the ability to understand complex systems, and to think about how different failures might have occurred. Developing this combination of analytic and creative ability requires mentoring and time, as well as suitable training." These people might work in a technical role, or in a service management role. Ref 5.2.8
19	C	7.1.e	A. Incorrect. Compliments and complaints are examples of service requests. The efficiency of the practice does not depend on them. Ref 5.2.16 B. Incorrect. Many service requests are initiated and fulfilled using self-service tools, but not all are appropriate for this approach. Ref 5.2.16 C. Correct. "Service request management is dependent upon well-designed processes and procedures, which are operationalized through tracking and automation tools to maximize the efficiency of the practice." Ref 5.2.16 D. Incorrect. "Service requests are a normal part of service delivery and are not a failure or degradation of service, which are handled as incidents." Ref 5.2.16

Q	A	Syllabus Ref	Rationale
20	D	7.1.f	A. Incorrect. This is a purpose of 'relationship management': "to establish and nurture the links between the organization and its stakeholders at strategic and tactical levels." Ref 5.1.9 B. Incorrect. "Service desks provide a clear path for users to report issues, queries, and requests, and have them acknowledged, classified, owned, and actioned." This does not include the assessment and authorization of changes. This will be provided by the 'change enablement' practice. Ref 5.2.14 C. Incorrect. Investigating the cause of incidents is a purpose of 'problem management'. "The purpose of the problem management practice is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents." Ref 5.2.8 D. Correct. "Another key aspect of a good service desk is its practical understanding of the wider organization, the business processes, and the users." Ref 5.2.14
21	A	6.1.g	A. Correct. "The purpose of the service configuration management practice is to ensure that accurate and reliable information about the configuration of services, and the CIs that support them, is available when and where it is needed. This includes information on how CIs are configured and the relationships between them". Ref 5.2.11 B. Incorrect. "The purpose of the service desk practice is to capture demand for incident resolution and service requests". Ref 5.2.14 C. Incorrect. "The purpose of the IT asset management practice is to plan and manage the full lifecycle of all IT assets, to help the organization: maximize value, control costs, manage risks, support decision-making about purchase, re-use, and disposal of assets". Ref 5.2.6 D. Incorrect. "The purpose of the monitoring and event management practice is to systematically observe services and service components, and record and report selected changes of state identified as events". Ref 5.2.7

Q	A	Syllabus Ref	Rationale
22	D	6.1.k	A. Incorrect. "The purpose of the supplier management practice is to ensure that the organization's suppliers and their performances are managed appropriately to support the seamless provision of quality products and services." Ref 5.1.13 B. Incorrect. "The purpose of the deployment management practice is to move new or changed hardware, software, documentation, processes, or any other component to live environments. It may also be involved in deploying components to other environments, for testing or staging." Ref 5.3.1 C. Incorrect. "The purpose of the problem management practice is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents, and managing workarounds and known errors." Ref 5.2.8 D. Correct. "The purpose of the incident management practice is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible." Ref 5.2.5
23	B	1.1.d	A. Incorrect. "Customer: The role that defines the requirements for a service and takes responsibility for the outcomes of service consumption." Ref 2.2.2 B. Correct. "Customer: The role that defines the requirements for a service and takes responsibility for the outcomes of service consumption." Ref 2.2.2 C. Incorrect. "Customer: The role that defines the requirements for a service and takes responsibility for the outcomes of service consumption." Ref 2.2.2 D. Incorrect. "Customer: The role that defines the requirements for a service and takes responsibility for the outcomes of service consumption." Ref 2.2.2
24	D	2.2.c	A. Incorrect. 'Optimize and automate' says that you should understand and optimize something before you automate it. "Attempting to automate something that is complex or suboptimal is unlikely to achieve the desired outcome." Ref 4.3.7.3 B. Incorrect. 'Start where you are' says that you should understand the current situation before making changes. "Services and methods already in place should be measured and/or observed directly to properly understand their current state and what can be re-used from them. Decisions on how to proceed should be based on information that is as accurate as possible." Ref 4.3.2.1 C. Incorrect. 'Focus on value' says that each improvement iteration should create value for stakeholders "All activities conducted by the organization should link back, directly or indirectly, to value for itself, its customers, and other stakeholders." Ref 4.3.1 D. Correct. 'Progress iteratively with feedback' recommends comprehending "the whole, but do something: Sometimes the greatest enemy to progressing iteratively is the desire to understand and account for everything. This can lead to what has sometimes been called 'analysis paralysis', in which so much time is spent analyzing the situation that nothing ever gets done about it." Ref 4.3.3.3

Q	A	Syllabus Ref	Rationale
25	B	7.1.d	A. Incorrect. "It is not essential to analyze every problem; it is more valuable to make significant progress on the highest-priority problems than to investigate every minor problem that the organization is aware of." Ref 5.2.8 B. Correct. "Problems are prioritized for analysis based on the risk that they pose, and are managed as risks based on their potential impact and probability." Ref 5.2.8 C. Incorrect. "Error control also includes identification of potential permanent solutions which may result in a change request for implementation of a solution, but only if this can be justified in terms of cost, risks, and benefits." Ref 5.2.8 D. Incorrect. "When a problem cannot be resolved quickly, it is often useful to find and document a workaround for future incidents, based on an understanding of the problem." Ref 5.2.8
26	A	7.1.a	A. Correct "When contracting for a supplier's service, the contract should include details of how they will measure, report on, and improve their services over the life of the contract." Ref 5.1.2 B. Incorrect. Agile methods do take an incremental approach, as they "focus on making improvements incrementally at a cadence"; however, this alone would not guarantee a supplier is committed to continual improvement. Ref 5.1.2 C. Incorrect. Many improvement initiatives use project management practices, but it may not be practical to do so for some. "Many improvement initiatives will use project management practices to organize and manage their execution", but not all improvement initiatives. Ref 5.1.2 D. Incorrect. Many 'problem management' activities will result in improvements, however not all supplier problems will result in improvements, so this is not a sensible approach. "It is not essential to analyze every problem; it is more valuable to make significant progress on the highest-priority problems than to investigate every minor problem that the organization is aware of." Ref 5.2.8

Q	A	Syllabus Ref	Rationale
27	C	3.1.c	A. Incorrect. "The partners and suppliers dimension encompasses an organization's relationships with other organizations that are involved in the design, development, deployment, delivery, support and/or continual improvement of services. It also incorporates contracts and other agreements between the organization and its partners or suppliers." These considerations depend on the supplier strategy, rather than influence it. Ref 3.3 B. Incorrect. The type of cooperation with suppliers depends on the supplier strategy, rather than influence it. The forms of cooperation "are not fixed but exist as a spectrum. An organization acting as a service provider will have a position on this spectrum, which will vary depending on its strategy and objectives for customer relationships." Ref 3.3 C. Correct. "Corporate culture: some organizations have a historical preference for one approach over another. Long-standing cultural bias is difficult to change without compelling reasons." Ref 3.3 D. Incorrect. The level of formality depends on the form of cooperation, which in turn depends on the supplier strategy. The forms of cooperation "are not fixed but exist as a spectrum. An organization acting as a service provider will have a position on this spectrum, which will vary depending on its strategy and objectives for customer relationships." Ref 3.3
28	C	6.2.f	A. Incorrect. Change is "The addition, modification, or removal of anything that could have a direct or indirect effect on services." Ref 5.2.4 B. Incorrect. An event is "Any change of state that has significance for the management of a service or other configuration item (CI). Events are typically recognized through notifications created by an IT service, CI, or monitoring tool." Ref 5.2.7 C. Correct. A problem is "a cause, or potential cause, of one or more incidents." Ref 5.2.8 D. Incorrect. An incident is "An unplanned interruption to a service or reduction in the quality of a service." Ref 5.2.5

Q	A	Syllabus Ref	Rationale
29	B	6.1.b	A. Incorrect. "The purpose of the continual improvement practice is to align the organization's practices and services with changing business needs through the ongoing improvement of products, services, and practices, or any element involved in the management of products and services." Ref 5.1.2 B. Correct. "The purpose of the relationship management practice is to establish and nurture the links between the organization and its stakeholders at strategic and tactical levels. It includes the identification, analysis, monitoring, and continual improvement of relationships with and between stakeholders." Ref 5.1.9 C. Incorrect. "The purpose of the problem management practice is to reduce the likelihood and impact of incidents by identifying actual and potential causes of incidents, and managing workarounds and known errors." Ref 5.2.8 D. Incorrect. "The purpose of the incident management practice is to minimize the negative impact of incidents by restoring normal service operation as quickly as possible." Ref 5.2.5
30	B	2.1	A. Incorrect. "To support a holistic approach to service management, ITIL defines four dimensions that collectively are critical to the effective and efficient facilitation of value for customers and other stakeholders in the form of products and services." Adopting ITIL to address these four dimensions of ITSM helps to facilitate value but does not help the organization to adapt ITIL guidance to its organization. Ref 3 B. Correct. The guiding principles can "guide organizations in their work as they adopt a service management approach and adapt ITIL guidance to their own specific needs and circumstances." Ref 4.3 C. Incorrect. "Service value chain: A set of interconnected activities that an organization performs to deliver a valuable product or service to its consumers and to facilitate value realization." Adopting a service value chain helps to facilitate value but does not help the organization to adapt ITIL guidance to its organization. Ref 4.1 D. Incorrect. Practices are sets of organizational resources designed for performing work or accomplishing an objective. They do not help the organization to adapt ITIL guidance to its organization. Ref 4.1
31	D	1.2.e	A. Incorrect. An event is: "Any change of state that has significance for the management of a service or other configuration item (CI). Events are typically recognized through notifications created by an IT service, CI, or monitoring tool." Ref 5.2.7 B. Incorrect. Risk is "A possible event that could cause harm or loss, or make it more difficult to achieve objectives." Ref 2.5.3 C. Incorrect. An outcome is "A result for a stakeholder enabled by one or more outputs." Ref 2.5.1 D. Correct. An output is "A tangible or intangible deliverable of an activity". Ref 2.5.1

Q	A	Syllabus Ref	Rationale
32	C	7.1.g	A. Incorrect. There would not be fewer metrics gathered, although it would combine and aggregate them to provide clearer information. "The practice requires pragmatic focus on the whole service and not simply its constituent parts; for example, simple individual metrics (such as percentage system availability) should not be taken to represent the whole service." Ref 5.2.15 B. Incorrect. The reason is to reduce reporting of the individual system-based metrics which are not meaningful to the customer. "They should relate to defined outcomes and not simply operational metrics. This can be achieved with balanced bundles of metrics." Ref 5.2.15.1 C. Correct. "They should relate to defined outcomes and not simply operational metrics. This can be achieved with balanced bundles of metrics." Ref 5.2.15.1 D. Incorrect. This does not affect the mechanism for metric collection. "The practice requires pragmatic focus on the whole service and not simply its constituent parts; for example, simple individual metrics (such as percentage system availability) should not be taken to represent the whole service." Ref 5.2.15
33	C	7.1.c	A. Incorrect. "Modern IT service management tools can provide automated matching of incidents to other incidents, problems or known errors," but this is not dependent on the incident priority, which is used to ensure that incidents with the highest business impact are resolved first. Ref 5.2.5 B. Incorrect. "More complex incidents will usually be escalated to a support team for resolution. Typically, the routing is based on the incident category, which should help to identify the correct team." Ref 5.2.5 C. Correct. "Incidents are prioritized based on an agreed classification to ensure that incidents with the highest business impact are resolved first." Ref 5.2.5 D. Incorrect. "Effective incident management often requires a high level of collaboration within and between teams." However, this is not dependent on the incident priority, which is used to "ensure that incidents with the highest business impact are resolved first". Ref 5.2.5
34	B	6.1.d	A. Incorrect. "The purpose of the relationship management practice is to establish and nurture the links between the organization and its stakeholders at strategic and tactical levels." Ref 5.1.9 B. Correct. "The purpose of the IT asset management practice is to plan and manage the full lifecycle of all IT assets, to help the organization: maximize value, control costs, manage risks." Ref 5.2.6 C. Incorrect. "The purpose of the release management practice is to make new and changed services and features available for use." Ref 5.2.9 D. Incorrect. "The purpose of the service desk practice is to capture demand for incident resolution and service requests." Ref 5.2.14

Q	A	Syllabus Ref	Rationale
35	A	7.1.d	A. Correct. "Problem identification activities identify and log problems. These include:... detection of duplicate and recurring issues by users, service desk, and technical support staff." Ref 5.2.8 B. Incorrect. Identifying the correct team for escalating an incident is based on incident category, not recurring incidents. "More complex incidents will usually be escalated to a support team for resolution. Typically, the routing is based on the incident category, which should help to identify the correct team." Ref 5.2.5 C. Incorrect. "The purpose of the service request management practice is to support the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner." Detection of recurring issues by the service desk is not required to do this. Ref 5.2.16 D. Incorrect. "The person or group who authorizes a change is known as a change authority. It is essential that the correct change authority is assigned to each type of change to ensure that change enablement is both efficient and effective." This assignment is based on the type of change, and detection of recurring issues by the service desk is not required to do this. Ref 5.2.4
36	D	5.2.a	A. Incorrect. "The purpose of the improve value chain activity is to ensure continual improvement of products, services, and practices across all value chain activities and the four dimensions of service management." Ref 4.5.2 B. Incorrect. "The purpose of the engage value chain activity is to provide a good understanding of stakeholder needs, transparency, and continual engagement and good relationships with all stakeholders." Ref 4.5.3 C. Incorrect. "The purpose of the obtain/build value chain activity is to ensure that service components are available when and where they are needed, and meet agreed specifications." Ref 4.5.5 D. Correct. "The purpose of the plan value chain activity is to ensure a shared understanding of the vision, current status, and improvement direction for all four dimensions and all products and services across the organization." Ref 4.5.1

Q	A	Syllabus Ref	Rationale
37	D	2.2.a	A. Incorrect. The emphasis of this principle is on how to approach activities: "Always use the minimum number of steps to accomplish an objective. Outcome-based thinking should be used to produce practical solutions that deliver valuable outcomes." Ref 4.3.6 B. Incorrect. This principle is focused on increased effectiveness and efficiency. "Organizations must maximize the value of the work carried out by their human and technical resources." Ref 4.3.7 C. Incorrect. This shows how to approach making changes. "Resist the temptation to do everything at once. Even huge initiatives must be accomplished iteratively. By organizing work into smaller, manageable sections that can be executed and completed in a timely manner, the focus on each effort will be sharper and easier to maintain." Ref 4.3.3 D. Correct. "This section is mostly focused on the creation of value for service consumers... This value may come in various forms, such as revenue, customer loyalty, lower cost, or growth opportunities." Ref 4.3.1
38	B	7.1.g	A. Incorrect. "Service desks provide a clear path for users to report issues, queries, and requests, and have them acknowledged, classified, owned, and actioned." Ref 5.2.14 B. Correct. "Service level management provides the end-to-end visibility of the organization's services. To achieve this, service level management:... captures and reports on service issues, including performance against defined service levels." Ref 5.2.14 C. Incorrect. "A request from a user or a user's authorized representative that initiates a service action which has been agreed as a normal part of service delivery." Ref 5.2.15 D. Incorrect. "Service configuration management collects and manages information about a wide variety of CIs, typically including hardware, software, networks, buildings, people, suppliers, and documentation." Ref 5.2.11

Q	A	Syllabus Ref	Rationale
39	C	7.1.b	A. Incorrect. Emergency changes "are changes that must be implemented as soon as possible; for example, to resolve an incident or implement a security patch." The implementation of a planned new release of a software application does not fall into this category and would be planned and implemented as a normal change. Ref 5.2.4 B. Incorrect. Emergency changes "are changes that must be implemented as soon as possible; for example, to resolve an incident or implement a security patch." A low-risk computer upgrade implemented as a service request does not fall into this category. Using a service request implies that this is a standard change, as standard changes "are often initiated as service requests." Ref 5.2.4 C. Correct. Emergency changes are "Changes that must be implemented as soon as possible; for example, to resolve an incident or implement a security patch." Ref 5.2.4 D. Incorrect. Emergency changes "must be implemented as soon as possible; for example, to resolve an incident or implement a security patch. Emergency changes are not typically included in a change schedule, and the process for assessment and authorization is expedited to ensure they can be implemented quickly." A scheduled major hardware and software implementation does not fall into this category and would be planned and implemented as a normal change. Ref 5.2.4
40	B	2.2.b	A. Incorrect. The guiding principle 'focus on value' advises "All activities conducted by the organization should link back, directly or indirectly, to value for itself, its customers, and other stakeholders." This is not the main concern of the guiding principle 'start where you are'. Ref 4.3.1 B. Correct. The guiding principle 'start where you are' advises "Having a proper understanding of the current state of services and methods is important to selecting which elements to re-use, alter, or build upon." Ref 4.3.2.3 C. Incorrect. The focus of the guiding principle 'collaborate and promote visibility' is on involving the right stakeholders and communicating with them. "When initiatives involve the right people in the correct roles, efforts benefit from better buy-in, more relevance (because better information is available for decision-making) and increased likelihood of long-term success". This is not the main concern of the guiding principle 'start where you are'. Ref 4.3.4 D. Incorrect. The main concern of the guiding principle 'progress iteratively with feedback' is breaking initiatives into smaller parts. "By organizing work into smaller, manageable sections that can be executed and completed in a timely manner, the focus on each effort will be sharper and easier to maintain." This is not the main concern of the guiding principle 'start where you are'. Ref 4.3.3

ITIL® 4 Foundation Candidate Syllabus

September 2019

Introduction

The ITIL 4 Foundation qualification is intended to introduce candidates to the management of modern IT-enabled services, to provide them with an understanding of the common language and key concepts, and to show them how they can improve their work and the work of their organization with ITIL 4 guidance. Furthermore, the qualification will provide the candidate with an understanding of the ITIL 4 service management framework and how it has evolved to adopt modern technologies and ways of working.

The ITIL 4 Foundation examination is intended to assess whether the candidate can demonstrate sufficient recall and understanding of the ITIL 4 service management framework, as described in the syllabus below, to be awarded the ITIL 4 Foundation qualification. The ITIL 4 Foundation qualification is a prerequisite for the ITIL 4 higher level qualifications, which assess the candidate's ability to apply their understanding of the relevant parts of the ITIL framework in context.

Exam Overview

Material allowed	None	This is a 'closed book' exam. The <i>ITIL Foundation</i> publication, ITIL 4 edition, should be used for study, but is NOT permitted to be used in the exam.
Exam duration	60 minutes	Candidates taking the exam in a language that is not their native or working language may be awarded 25% extra time, i.e. 75 minutes in total.
Number of marks	40 marks	There are 40 questions, each worth 1 mark. There is no negative marking.
Provisional Pass mark	26 marks	You will need to get 26 questions correct (65%) to pass the exam.
Level of thinking	Bloom's levels 1 & 2	"Bloom's level" describes the type of thinking needed to answer the question. For Bloom's level 1 questions, you need to <u>recall</u> information about the ITIL 4 service management framework. For Bloom's 2 questions, you need to show <u>understanding</u> of these concepts.
Question types	Classic, Negative, Missing word, & List	The questions are all 'multiple choice'. For the 'standard' questions, you have a question and four answer options. 'Negative' questions are 'standard' question in which the stem is negatively worded. For the 'missing word' questions, there is a sentence with a word missing and you have to select the missing word from four options. For the 'list' questions, there is a list of four statements and you have to select two correct statements from the list.

Question Types

Example 'standard' OTQ:

Which is a source of best practice?

- a) Q
- b) P
- c) R
- d) S

Example 'list' OTQ:

Which statement about service asset and configuration management is CORRECT?

- 1. It does Q
 - 2. It does P
 - 3. It does R
 - 4. It does S
- a) 1 and 2
 - b) 2 and 3
 - c) 3 and 4
 - d) 1 and 4

NOTE: Two of the list items are correct. List style questions are never negative.

Please see the sample paper for an example of the exam format and content.

Example 'missing word' OTQ

Identify the missing word(s) in the following sentence.

A [?] defines requirements for services and takes responsibility for outcomes from service consumption.

- a) Role Q
- b) Role P
- c) Role R
- d) Role S

Example 'negative' standard OTQ:

Which is NOT a defined area of value?

- a) Q
- b) P
- c) R
- d) S

NOTE: Negative questions are **only used as an exception**, where part of the learning outcome is to know that something is not done or should not occur.

Syllabus

The table below gives a summary of the concepts that are tested in the exam, and the main parts of the manual in which these are described. The book references refer to the section stated, but not the subsections within that section, unless stated. The verb for each assessment criterion indicates the Bloom's level (BL): 'Recall'/'Define' indicates Level 1 basic recall and recognition, 'Describe'/'Explain', indicates Level 2 understanding/comprehension.

Learning Outcome	Assessment Criteria	Book References	Bloom's Level	No. marks
1. Understand the key concepts of service management	1.1 Recall the definition of: a) Service b) Utility c) Warranty d) Customer e) User f) Service management g) Sponsor	2.0, 2.2.2, 2.3.1, 2.5.4	BL1	2
	1.2 Describe the key concepts of creating value with services: a) Cost b) Value c) Organization d) Outcome e) Output f) Risk g) Utility h) Warranty	2.1, 2.1.1, 2.2 and all subsections of 2.5	BL2	2
	1.3 Describe the key concepts of service relationships: a) Service offering b) Service relationship management c) Service provision d) Service consumption	2.3.2, 2.4, 2.4.1	BL2	1
2. Understand how the ITIL guiding principles can help an organization adopt and adapt service management	2.1 Describe the nature, use and interaction of the guiding principles	4.3, 4.3.8	BL2	1
	2.2 Explain the use of the guiding principles (4.3): a) Focus on value (4.3.1 - 4.3.1.4) b) Start where you are (4.3.2 - 4.3.2.3) c) Progress iteratively with feedback (4.3.3 - 4.3.3.3) d) Collaborate and promote visibility (4.3.4 - 4.3.4.4) e) Think and work holistically (4.3.5 - 4.3.5.1) f) Keep it simple and practical (4.3.6 - 4.3.6.3) g) Optimize and automate (4.3.7 - 4.3.7.3)	4.3, 4.3.1-4.3.7.3	BL2	5
3. Understand the four dimensions of service management	3.1 Describe the four dimensions of service management (3): a) Organizations and people (3.1) b) Information and technology (3.2) c) Partners and suppliers (3.3) d) Value streams and processes (3.4-3.4.2)	3, 3.1-3.4.2	BL2	2
4. Understand the purpose and components of the ITIL service value system	4.1 Describe the ITIL service value system (4.1)	4.1	BL2	1
5. Understand the activities of the service value chain, and how they interconnect	5.1 Describe the interconnected nature of the service value chain and how this supports value streams (4.5)	4.5	BL2	1

Learning Outcome	Assessment Criteria	Book References	Bloom's Level	No. marks
	5.2 Describe the purpose of each value chain activity: a) Plan b) Improve c) Engage d) Design & transition e) Obtain/build f) Deliver & support	4.5.1-4.5.6	BL2	1
6. Know the purpose and key terms of 15 ITIL practices	6.1 Recall the purpose of the following ITIL practices: a) Information security management (5.1.3) b) Relationship management (5.1.9) c) Supplier management (5.1.13) d) IT asset management (5.2.6) e) Monitoring and event management (5.2.7) f) Release management (5.2.9) g) Service configuration management (5.2.11) h) Deployment management (5.3.1) i) Continual improvement (5.1.2) j) Change enablement (5.2.4) k) Incident management (5.2.5) l) Problem management (5.2.8) m) Service request management (5.2.16) n) Service desk (5.2.14) o) Service level management (5.2.15)	5.1.2, 5.1.3, 5.1.9, 5.1.13, 5.2.4, 5.2.5, 5.2.6, 5.2.7, 5.2.8, 5.2.9, 5.2.11, 5.2.14, 5.2.15, 5.2.16, 5.3.1,	BL1	5
	6.2 Recall definitions of the following ITIL terms: a) IT asset b) Event c) Configuration item d) Change e) Incident f) Problem g) Known error	5.2.4, 5.2.5, 5.2.6, 5.2.7, 5.2.8, 5.2.11	BL1	2
7. Understand 7 ITIL practices	7.1 Explain the following ITIL practices in detail, excluding how they fit within the service value chain: a) Continual improvement (5.1.2) including: - The continual improvement model (4.6, fig 4.3) b) Change enablement (5.2.4) c) Incident management (5.2.5) d) Problem management (5.2.8) e) Service request management (5.2.16) f) Service desk (5.2.14) g) Service level management (5.2.15 - 5.2.15.1)	4.6, fig 4.3, 5.1.2, 5.2.4, 5.2.5, 5.2.8, 5.2.16, 5.2.14, 5.2.15, 5.2.15.1	BL2	17

GLOSSARY

Glossary

acceptance criteria

A list of minimum requirements that a service or service component must meet for it to be acceptable to key stakeholders.

Agile

An umbrella term for a collection of frameworks and techniques that together enable teams and individuals to work in a way that is typified by collaboration, prioritization, iterative and incremental delivery, and timeboxing. There are several specific methods (or frameworks) that are classed as Agile, such as Scrum, Lean, and Kanban.

architecture management practice

The practice of providing an understanding of all the different elements that make up an organization and how those elements relate to one another.

asset register

A database or list of assets, capturing key attributes such as ownership and financial value.

availability

The ability of an IT service or other configuration item to perform its agreed function when required.

availability management practice

The practice of ensuring that services deliver agreed levels of availability to meet the needs of customers and users.

baseline

A report or metric that serves as a starting point against which progress or change can be assessed.

best practice

A way of working that has been proven to be successful by multiple organizations.

big data

The use of very large volumes of structured and unstructured data from a variety of sources to gain new insights.

business analysis practice

The practice of analysing a business or some element of a business, defining its needs and recommending solutions to address these needs and/or solve a business problem, and create value for stakeholders.

business case

A justification for expenditure of organizational resources, providing information about costs, benefits, options, risks, and issues.

business impact analysis (BIA)

A key activity in the practice of service continuity management that identifies vital business functions and their dependencies.

business relationship manager (BRM)

A role responsible for maintaining good relationships with one or more customers.

call

An interaction (e.g. a telephone call) with the service desk. A call could result in an incident or a service request being logged.

call/contact centre

An organization or business unit that handles large numbers of incoming and outgoing calls and other interactions.

capability

The ability of an organization, person, process, application, configuration item, or IT service to carry out an activity.

capacity and performance management practice

The practice of ensuring that services achieve agreed and expected performance levels, satisfying current and future demand in a cost-effective way.

capacity planning

The activity of creating a plan that manages resources to meet demand for services.

change

The addition, modification, or removal of anything that could have a direct or indirect effect on services.

change authority

A person or group responsible for authorizing a change.

change enablement practice

The practice of ensuring that risks are properly assessed, authorizing changes to proceed and managing a change schedule in order to maximize the number of successful service and product changes.

change model

A repeatable approach to the management of a particular type of change.

change schedule

A calendar that shows planned and historical changes.

charging

The activity that assigns a price for services.

cloud computing

A model for enabling on-demand network access to a shared pool of configurable computing resources that can be rapidly provided with minimal management effort or provider interaction.

compliance

The act of ensuring that a standard or set of guidelines is followed, or that proper, consistent accounting or other practices are being employed.

confidentiality

A security objective that ensures information is not made available or disclosed to unauthorized entities.

configuration

An arrangement of configuration items (CIs) or other resources that work together to deliver a product or service. Can also be used to describe the parameter settings for one or more CIs.

configuration item (CI)

Any component that needs to be managed in order to deliver an IT service.

configuration management database (CMDB)

A database used to store configuration records throughout their lifecycle. The CMDB also maintains the relationships between configuration records.

configuration management system (CMS)

A set of tools, data, and information that is used to support service configuration management.

configuration record

A record containing the details of a configuration item (CI). Each configuration record documents the lifecycle of a single CI. Configuration records are stored in a configuration management database.

continual improvement practice

The practice of aligning an organization's practices and services with changing business needs through the ongoing identification and improvement of all elements involved in the effective management of products and services.

continuous deployment

An integrated set of practices and tools used to deploy software changes into the production environment. These software changes have already passed pre-defined automated tests.

continuous integration/continuous delivery

An integrated set of practices and tools used to merge developers' code, build and test the resulting software, and package it so that it is ready for deployment.

control

The means of managing a risk, ensuring that a business objective is achieved, or that a process is followed.

cost

The amount of money spent on a specific activity or resource.

cost centre

A business unit or project to which costs are assigned.

critical success factor (CSF)

A necessary precondition for the achievement of intended results.

culture

A set of values that is shared by a group of people, including expectations about how people should behave, ideas, beliefs, and practices.

customer

The role that defines the requirements for a service and takes responsibility for the outcomes of service consumption.

customer experience (CX)

The sum of functional and emotional interactions with a service and service provider as perceived by a service customer.

dashboard

A real-time graphical representation of data.

deliver and support

The value chain activity that ensures services are delivered and supported according to agreed specifications and stakeholders' expectations.

demand

Input to the service value system based on opportunities and needs from internal and external stakeholders.

deployment

The movement of any service component into any environment.

deployment management practice

The practice of moving new or changed hardware, software, documentation, processes, or any other service component to live environments.

design and transition

The value chain activity that ensures products and services continually meet stakeholder expectations for quality, costs, and time to market.

design thinking

A practical and human-centred approach used by product and service designers to solve complex problems and find practical and creative solutions that meet the needs of an organization and its customers.

development environment

An environment used to create or modify IT services or applications.

DevOps

An organizational culture that aims to improve the flow of value to customers. DevOps focuses on culture, automation, Lean, measurement, and sharing (CALMS).

digital transformation

The evolution of traditional business models to meet the needs of highly empowered customers, with technology playing an enabling role.

disaster

A sudden unplanned event that causes great damage or serious loss to an organization. A disaster results in an organization failing to provide critical business functions for some predetermined minimum period of time.

disaster recovery plans

A set of clearly defined plans related to how an organization will recover from a disaster as well as return to a pre-disaster condition, considering the four dimensions of service management.

driver

Something that influences strategy, objectives, or requirements.

effectiveness

A measure of whether the objectives of a practice, service or activity have been achieved.

efficiency

A measure of whether the right amount of resources have been used by a practice, service, or activity.

emergency change

A change that must be introduced as soon as possible.

engage

The value chain activity that provides a good understanding of stakeholder needs, transparency, continual engagement, and good relationships with all stakeholders.

environment

A subset of the IT infrastructure that is used for a particular purpose, for example a live environment or test environment. Can also mean the external conditions that influence or affect something.

error

A flaw or vulnerability that may cause incidents.

error control

Problem management activities used to manage known errors.

escalation

The act of sharing awareness or transferring ownership of an issue or work item.

event

Any change of state that has significance for the management of a service or other configuration item.

external customer

A customer who works for an organization other than the service provider.

failure

A loss of ability to operate to specification, or to deliver the required output or outcome.

feedback loop

A technique whereby the outputs of one part of a system are used as inputs to the same part of the system.

four dimensions of service management

The four perspectives that are critical to the effective and efficient facilitation of value for customers and other stakeholders in the form of products and services.

goods

Tangible resources that are transferred or available for transfer from a service provider to a service consumer, together with ownership and associated rights and responsibilities.

governance

The means by which an organization is directed and controlled.

identity

A unique name that is used to identify and grant system access rights to a user, person, or role.

improve

The value chain activity that ensures continual improvement of products, services, and practices across all value chain activities and the four dimensions of service management.

incident

An unplanned interruption to a service or reduction in the quality of a service.

incident management

The practice of minimizing the negative impact of incidents by restoring normal service operation as quickly as possible.

information and technology

One of the four dimensions of service management. It includes the information and knowledge used to deliver services, and the information and technologies used to manage all aspects of the service value system.

information security management practice

The practice of protecting an organization by understanding and managing risks to the confidentiality, integrity, and availability of information.

information security policy

The policy that governs an organization's approach to information security management.

infrastructure and platform management practice

The practice of overseeing the infrastructure and platforms used by an organization. This enables the monitoring of technology solutions available, including solutions from third parties.

integrity

A security objective that ensures information is only modified by authorized personnel and activities.

internal customer

A customer who works for the same organization as the service provider.

Internet of Things

The interconnection of devices via the internet that were not traditionally thought of as IT assets, but now include embedded computing capability and network connectivity.

IT asset

Any financially valuable component that can contribute to the delivery of an IT product or service.

IT asset management practice

The practice of planning and managing the full lifecycle of all IT assets.

IT infrastructure

All of the hardware, software, networks, and facilities that are required to develop, test, deliver, monitor, manage, and support IT services.

IT service

A service based on the use of information technology.

ITIL

Best-practice guidance for IT service management.

ITIL guiding principles

Recommendations that can guide an organization in all circumstances, regardless of changes in its goals, strategies, type of work, or management structure.

ITIL service value chain

An operating model for service providers that covers all the key activities required to effectively manage products and services.

ITIL value chain activity

A step of the value chain that an organization takes in the creation of value.

Kanban

A method for visualizing work, identifying potential blockages and resource conflicts, and managing work in progress.

key performance indicator (KPI)

An important metric used to evaluate the success in meeting an objective.

knowledge management practice

The practice of maintaining and improving the effective, efficient, and convenient use of information and knowledge across an organization.

known error

A problem that has been analysed but has not been resolved.

Lean

An approach that focuses on improving workflows by maximizing value through the elimination of waste.

lifecycle

The full set of stages, transitions, and associated statuses in the life of a service, product, practice, or other entity.

live

Refers to a service or other configuration item operating in the live environment.

live environment

A controlled environment used in the delivery of IT services to service consumers.

maintainability

The ease with which a service or other entity can be repaired or modified.

major incident

An incident with significant business impact, requiring an immediate coordinated resolution.

management system

Interrelated or interacting elements that establish policy and objectives and enable the achievement of those objectives.

maturity

A measure of the reliability, efficiency and effectiveness of an organization, practice, or process.

mean time between failures (MTBF)

A metric of how frequently a service or other configuration item fails.

mean time to restore service (MTRS)

A metric of how quickly a service is restored after a failure.

measurement and reporting

The practice of supporting good decision-making and continual improvement by decreasing levels of uncertainty.

metric

A measurement or calculation that is monitored or reported for management and improvement.

minimum viable product (MVP)

A product with just enough features to satisfy early customers, and to provide feedback for future product development.

mission

A short but complete description of the overall purpose and intentions of an organization.

model

A representation of a system, practice, process, service, or other entity that is used to understand and predict its behaviour and relationships.

modelling

The activity of creating, maintaining, and utilizing models.

monitoring

Repeated observation of a system, practice, process, service, or other entity to detect events and to ensure that the current status is known.

monitoring and event management practice

The practice of systematically observing services and service components, and recording and reporting selected changes of state identified as events.

obtain/build

The value chain activity that ensures service components are available when and where they are needed, and that they meet agreed specifications.

operation

The routine running and management of an activity, product, service, or other configuration item.

operational technology

The hardware and software solutions that detect or cause changes in physical processes through direct monitoring and/or control of physical devices such as valves, pumps, etc.

organization

A person or a group of people that has its own functions with responsibilities, authorities, and relationships to achieve its objectives.

organizational change management practice

The practice of ensuring that changes in an organization are smoothly and successfully implemented and that lasting benefits are achieved by managing the human aspects of the changes.

organizational resilience

The ability of an organization to anticipate, prepare for, respond to, and adapt to unplanned external influences.

organizational velocity

The speed, effectiveness, and efficiency with which an organization operates. Organizational velocity influences time to market, quality, safety, costs, and risks.

organizations and people

One of the four dimensions of service management. It ensures that the way an organization is structured and managed, as well as its roles, responsibilities, and systems of authority and communication, is well defined and supports its overall strategy and operating model.

outcome

A result for a stakeholder enabled by one or more outputs.

output

A tangible or intangible deliverable of an activity.

outsourcing

The process of having external suppliers provide products and services that were previously provided internally.

partners and suppliers

One of the four dimensions of service management. It encompasses the relationships an organization has with other organizations that are involved in the design, development, deployment, delivery, support, and/or continual improvement of services.

partnership

A relationship between two organizations that involves working closely together to achieve common goals and objectives.

performance

A measure of what is achieved or delivered by a system, person, team, practice, or service.

pilot

A test implementation of a service with a limited scope in a live environment.

plan

The value chain activity that ensures a shared understanding of the vision, current status, and improvement direction for all four dimensions and all products and services across an organization.

policy

Formally documented management expectations and intentions, used to direct decisions and activities.

portfolio management practice

The practice of ensuring that an organization has the right mix of programmes, projects, products, and services to execute its strategy within its funding and resource constraints.

post-implementation review (PIR)

A review after the implementation of a change, to evaluate success and identify opportunities for improvement.

practice

A set of organizational resources designed for performing work or accomplishing an objective.

problem

A cause, or potential cause, of one or more incidents.

problem management practice

The practice of reducing the likelihood and impact of incidents by identifying actual and potential causes of incidents, and managing workarounds and known errors.

procedure

A documented way to carry out an activity or a process.

process

A set of interrelated or interacting activities that transform inputs into outputs. Processes define the sequence of activities and their dependencies.

product

A configuration of an organization's resources designed to offer value for a consumer.

production environment

See live environment.

programme

A set of related projects and activities, and an organization structure created to direct and oversee them.

project

A temporary structure that is created for the purpose of delivering one or more outputs (or products) according to an agreed business case.

project management practice

The practice of ensuring that all an organization's projects are successfully delivered.

quick win

An improvement that is expected to provide a return on investment in a short period of time with relatively small cost and effort.

record

A document stating results achieved and providing evidence of activities performed.

recovery

The activity of returning a configuration item to normal operation after a failure.

recovery point objective (RPO)

The point to which information used by an activity must be restored to enable the activity to operate on resumption.

recovery time objective (RTO)

The maximum acceptable period of time following a service disruption that can elapse before the lack of business functionality severely impacts the organization.

relationship management practice

The practice of establishing and nurturing links between an organization and its stakeholders at strategic and tactical levels.

release

A version of a service or other configuration item, or a collection of configuration items, that is made available for use.

release management practice

The practice of making new and changed services and features available for use.

reliability

The ability of a product, service, or other configuration item to perform its intended function for a specified period of time or number of cycles.

request catalogue

A view of the service catalogue, providing details on service requests for existing and new services, which is made available for the user.

request for change (RFC)

A description of a proposed change used to initiate change enablement.

resolution

The action of solving an incident or problem.

resource

Personnel, material, finance, or other entity that is required for the execution of an activity or the achievement of an objective. Resources used by an organization may be owned by the organization or used according to an agreement with the resource owner.

retire

The act of permanently withdrawing a product, service, or other configuration item from use.

risk

A possible event that could cause harm or loss, or make it more difficult to achieve objectives. Can also be defined as uncertainty of outcome, and can be used in the context of measuring the probability of positive outcomes as well as negative outcomes.

risk assessment

An activity to identify, analyse, and evaluate risks.

risk management practice

The practice of ensuring that an organization understands and effectively handles risks.

service

A means of enabling value co-creation by facilitating outcomes that customers want to achieve, without the customer having to manage specific costs and risks.

service action

Any action required to deliver a service output to a user. Service actions may be performed by a service provider resource, by service users, or jointly.

service architecture

A view of all the services provided by an organization. It includes interactions between the services, and service models that describe the structure and dynamics of each service.

service catalogue

Structured information about all the services and service offerings of a service provider, relevant for a specific target audience.

service catalogue management practice

The practice of providing a single source of consistent information on all services and service offerings, and ensuring that it is available to the relevant audience.

service configuration management practice

The practice of ensuring that accurate and reliable information about the configuration of services, and the configuration items that support them, is available when and where needed.

service consumption

Activities performed by an organization to consume services. It includes the management of the consumer's resources needed to use the service, service actions performed by users, and the receiving (acquiring) of goods (if required).

service continuity management practice

The practice of ensuring that service availability and performance are maintained at a sufficient level in case of a disaster.

service design practice

The practice of designing products and services that are fit for purpose, fit for use, and that can be delivered by the organization and its ecosystem.

service desk

The point of communication between the service provider and all its users.

service desk practice

The practice of capturing demand for incident resolution and service requests.

service financial management practice

The practice of supporting an organization's strategies and plans for service management by ensuring that the organization's financial resources and investments are being used effectively.

service level

One or more metrics that define expected or achieved service quality.

service level agreement (SLA)

A documented agreement between a service provider and a customer that identifies both services required and the expected level of service.

service level management practice

The practice of setting clear business-based targets for service performance so that the delivery of a service can be properly assessed, monitored, and managed against these targets.

service management

A set of specialized organizational capabilities for enabling value for customers in the form of services.

service offering

A formal description of one or more services, designed to address the needs of a target consumer group. A service offering may include goods, access to resources, and service actions.

service owner

A role that is accountable for the delivery of a specific service.

service portfolio

A complete set of products and services that are managed throughout their lifecycles by an organization.

service provider

A role performed by an organization in a service relationship to provide services to consumers.

service provision

Activities performed by an organization to provide services. It includes management of the provider's resources, configured to deliver the service; ensuring access to these resources for users; fulfilment of the agreed service actions; service level management; and continual improvement. It may also include the supply of goods.

service relationship

A cooperation between a service provider and service consumer. Service relationships include service provision, service consumption, and service relationship management.

service relationship management

Joint activities performed by a service provider and a service consumer to ensure continual value co-creation based on agreed and available service offerings.

service request

A request from a user or a user's authorized representative that initiates a service action which has been agreed as a normal part of service delivery.

service request management practice

The practice of supporting the agreed quality of a service by handling all pre-defined, user-initiated service requests in an effective and user-friendly manner.

service validation and testing practice

The practice of ensuring that new or changed products and services meet defined requirements.

service value system (SVS)

A model representing how all the components and activities of an organization work together to facilitate value creation.

software development and management practice

The practice of ensuring that applications meet stakeholder needs in terms of functionality, reliability, maintainability, compliance, and auditability.

sourcing

The activity of planning and obtaining resources from a particular source type, which could be internal or external, centralized or distributed, and open or proprietary.

specification

A documented description of the properties of a product, service, or other configuration item.

sponsor

The role that authorizes budget for service consumption. Can also be used to describe an organization or individual that provides financial or other support for an initiative.

stakeholder

A person or organization that has an interest or involvement in an organization, product, service, practice, or other entity.

standard

A document, established by consensus and approved by a recognized body, that provides for common and repeated use, mandatory requirements, guidelines, or characteristics for its subject.

standard change

A low-risk, pre-authorized change that is well understood and fully documented, and which can be implemented without needing additional authorization.

status

A description of the specific states an entity can have at a given time.

strategy management practice

The practice of formulating the goals of an organization and adopting the courses of action and allocation of resources necessary for achieving those goals.

supplier

A stakeholder responsible for providing services that are used by an organization.

supplier management practice

The practice of ensuring that an organization's suppliers and their performance levels are managed appropriately to support the provision of seamless quality products and services.

support team

A team with the responsibility to maintain normal operations, address users' requests, and resolve incidents and problems related to specified products, services, or other configuration items.

system

A combination of interacting elements organized and maintained to achieve one or more stated purposes.

systems thinking

A holistic approach to analysis that focuses on the way that a system's constituent parts work, interrelate, and interact over time, and within the context of other systems.

technical debt

The total rework backlog accumulated by choosing workarounds instead of system solutions that would take longer.

test environment

A controlled environment established to test products, services, and other configuration items.

third party

A stakeholder external to an organization.

throughput

A measure of the amount of work performed by a product, service, or other system over a given period of time.

transaction

A unit of work consisting of an exchange between two or more participants or systems.

use case

A technique using realistic practical scenarios to define functional requirements and to design tests.

user

The role that uses services.

user experience (UX)

The sum of the functional and emotional interactions with a service and service provider as perceived by a user.

utility

The functionality offered by a product or service to meet a particular need. Utility can be summarized as 'what the service does' and can be used to determine whether a service is 'fit for purpose'. To have utility, a service must either support the performance of the consumer or remove constraints from the consumer. Many services do both.

utility requirements

Functional requirements which have been defined by the customer and are unique to a specific product.

validation

Confirmation that the system, product, service, or other entity meets the agreed specification.

value

The perceived benefits, usefulness, and importance of something.

value stream

A series of steps an organization undertakes to create and deliver products and services to consumers.

value streams and processes

One of the four dimensions of service management. It defines the activities, workflows, controls, and procedures needed to achieve the agreed objectives.

vision

A defined aspiration of what an organization would like to become in the future.

warranty

Assurance that a product or service will meet agreed requirements. Warranty can be summarized as 'how the service performs' and can be used to determine whether a service is 'fit for use'. Warranty often relates to service levels aligned with the needs of service consumers. This may be based on a formal agreement, or it may be a marketing message or brand image. Warranty typically addresses such areas as the availability of the service, its capacity, levels of security, and continuity. A service may be said to provide acceptable assurance, or 'warranty', if all defined and agreed conditions are met.

warranty requirements

Typically non-functional requirements captured as inputs from key stakeholders and other practices.

waterfall method

A development approach that is linear and sequential with distinct objectives for each phase of development.

work instruction

A detailed description to be followed in order to perform an activity.

workaround

A solution that reduces or eliminates the impact of an incident or problem for which a full resolution is not yet available. Some workarounds reduce the likelihood of incidents.

workforce and talent management practice

The practice of ensuring that an organization has the right people with the appropriate skills and knowledge and in the correct roles to support its business objectives.
